About CertyIQ

We here at CertyIQ eventually got enough of the industry's greedy exam paid for. Our team of IT professionals comes with years of experience in the IT industry Prior to training CertyIQ we worked in test areas where we observed the horrors of the paywall exam preparation system.

The misuse of the preparation system has left our team disillusioned. And for that reason, we decided it was time to make a difference. We had to make In this way, CertyIQ was created to provide quality materials without stealing from everyday people who are trying to make a living.

Doubt Support

We have developed a very scalable solution using which we are able to solve 400+ doubts every single day with an average rating of 4.8 out of 5.

Lifetime Free Updates

We provide lifetime free updates to our customers. To make life easier for our valued customers and fulfill their needs

Free Exam PDF

You are sure to pass the exam completely free of charge

Money Back Guarantee

We Provide 100% money back guarantee to our customer in case of any failure

John

October 19, 2022

Thanks you so much for your help. I scored 972 in my exam today. More than 90% were from your PDFs!

October 22, 2022

Passed my exam today with 891 marks. Out of 52 questions, 51 were from certyiq PDFs including Contoso case study.
Thank You certyiq team!

Dana

September 04, 2022

Thanks a lot for this updated AZ-900 Q&A. I just passed my exam and got 974, I followed both of your Az-900 videos and the 6 PDF, the PDFs are very much valid, all answers are correct. Could you please create a similar video/PDF for DP900, your content/PDF's is really awesome. The team did a really good job. Thank You 😊.

Henry Rome

2 months ago

These questions are real and 100 % valid. Thank you so much for your efforts, also your 4 PDFs are awesome, I passed the DP900 exam on 1 Sept. With 968 marks. Thanks a lot, buddy!

Esmaria

2 months ago

Simple easy to understand explanations. To anyone out there wanting to write AZ900, I highly recommend 6 PDF's. Thank you so much, appreciate all your hard work in having such great content. Passed my exam Today - 3 September with 942 score.

Ahamed Shibly

2 months ago

Customer support is realy fast and helpful, I just finished my exam and this video along with the 6 PDF helped me pass! Definitely recommend getting the PDFs. Thank you!

Microsoft

Microsoft Azure Fundamentals

Total: **473 Questions**

Link: <https://certiq.com/papers/microsoft/az-900>

DRAG DROP -

Your company intends to subscribe to an Azure support plan.

The support plan must allow for new support requests to be opened.

Which of the following are support plans that will allow this? Answer by dragging the correct option from the list to the answer area.

Select and Place:

Options

Answer

Basic

Developer

Standard

PROFESSIONAL
DIRECT

PREMIER

Answer:

Options

Answer

Basic

Developer

Standard

PROFESSIONAL
DIRECT

PREMIER

Basic

Developer

Standard

PROFESSIONAL
DIRECT

Explanation:

Basic: This is listed twice, suggesting it might be a basic tier or level of service.

Developer: Also listed twice, possibly indicating a tier tailored for developers.

Standard: Listed twice, likely representing a standard level of service or features.

PROFESSIONAL DIRECT: Listed twice, possibly indicating a higher tier with more advanced features.

Listed twice, which might refer to a direct service or access level.

Question: 2

CertyIQ

Your company has datacenters in Los Angeles and New York. The company has a Microsoft Azure subscription. You are configuring the two datacenters as geo-clustered sites for site resiliency.

You need to recommend an Azure storage redundancy option.

You have the following data storage requirements:

- ⇒ Data must be stored on multiple nodes.
 - ⇒ Data must be stored on nodes in separate geographic locations.
 - ⇒ Data can be read from the secondary location as well as from the primary location
- Which of the following Azure stored redundancy options should you recommend?

- A. Geo-redundant storage
- B. Read-only geo-redundant storage

- C. Zone-redundant storage
- D. Locally redundant storage

Answer: B**Explanation:**

RA-GRS allows you to have higher read availability for your storage account by providing read only access to the data replicated to the secondary location. Once you enable this feature, the secondary location may be used to achieve higher availability in the event the data is not available in the primary region. This is an opt-in feature which requires the storage account be geo-replicated.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy> <https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy-grs#read-access-geo-redundant-storage>

Question: 3**CertyIQ**

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's Azure subscription includes a Basic support plan.

They would like to request an assessment of an Azure environment's design from Microsoft. This is, however, not supported by the existing plan.

You want to make sure that the company subscribes to a support plan that allows this functionality, while keeping expenses to a minimum.

Solution: You recommend that the company subscribes to the Professional Direct support plan.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B**Explanation:**

B. No.

The Standard support plan would be the more cost-effective option compared to the Professional Direct plan for this specific requirement. The Standard plan includes support for design assessments and is generally less expensive than the Professional Direct plan.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Question: 4**CertyIQ**

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying Azure virtual machines for your company.

You need to make use of the appropriate cloud deployment solution.

Solution: You should make use of Software as a Service (SaaS).

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Key word (Virtual Machine), then we should go with IaaS

CertyIQ

Question: 5

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying Azure virtual machines for your company.

You need to make use of the appropriate cloud deployment solution.

Solution: You should make use of Platform as a Service (PaaS).

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

B. No - VMs are deployed in IaaS.

Refer: <https://docs.microsoft.com/en-us/learn/modules/fundamental-azure-concepts/categories-of-cloud-services>

Text to refer under IaaS : "Azure virtual machines are fully operational virtual compute devices running in Microsoft datacenters."

CertyIQ

Question: 6

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying Azure virtual machines for your company.

You need to make use of the appropriate cloud deployment solution.

Solution: You should make use of Infrastructure as a Service (IaaS).

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Virtual Machines and Azure storage accounts is IaaS

CertyIQ

Your developers have created 10 web applications that must be host on Azure.

You need to determine which Azure web tier plan to host the web apps. The web tier plan must meet the following

requirements:

- ⇒ The web apps will use custom domains.
- ⇒ The web apps each require 10 GB of storage.
- ⇒ The web apps must each run in dedicated compute instances.
- ⇒ Load balancing between instances must be included.
- ⇒ Costs must be minimized.

Which web tier plan should you use?

- A. Standard
- B. Basic
- C. Free
- D. Shared

Answer: A

Explanation:

Please read the requirements: Please note here the load balancing fact:

The web apps will use custom domains. (Basic, Shared and standard Support custom domain)

The web apps each require 10 GB of storage. (basic and standard support this)

The web apps must each run in dedicated compute instances.(basic support 3 instance max where standard support 10max)

Load balancing between instances must be included. (free, shared and basic dont support load balancing. standard and above tier only support load balancing/autoscaling)

Costs must be minimized. Standard is less costlier than premium and isolated.

I hope this is clear to chose the correct answer as STANDARD.

<https://azure.microsoft.com/en-us/pricing/details/app-service/windows/>

Question: 8

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are planning to migrate a company to Azure. Each of the company's numerous divisions will have an administrator in place to manage the Azure resources used by their respective division.

You want to make sure that the Azure deployment you employ allows for Azure to be segmented for the divisions, while keeping administrative effort to a minimum.

Solution: You plan to make use of several Azure Active Directory (Azure AD) directories.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The proposed solution is: You plan to make use of several Azure Active Directory (Azure AD) directories.

I think the key word is SEVERAL. Why in the world a company will create SEVERAL AADs when it can create a single AAD and organize its divisions right there?

This is why I consider the correct answer B (No).

CertyIQ

Question: 9

Your developers have created a portal web app for users in the Miami branch office. The web app will be publicly accessible and used by the Miami users to retrieve customer and product information. The web app is currently running in an on-premises test environment.

You plan to host the web app on Azure.

You need to determine which Azure web tier plan to host the web app. The web tier plan must meet the following requirements:

- ⇒ The website will use the miami.weyland.com URL.
- ⇒ The website will be deployed to two instances.
- ⇒ SSL support must be included.
- ⇒ The website requires 12 GB of storage.
- ⇒ Costs must be minimized.

Which web tier plan should you use?

- A. Standard
- B. Basic
- C. Free
- D. Shared

Answer: A

Explanation:

keyword 12 GB

Free = 1 GB

Shared = 1 GB

Basic = 10 GB

Standard = 50 GB

Premium = 250 GB

Isolated = 1 TB

<https://azure.microsoft.com/en-us/pricing/details/app-service/windows/>

References:

<http://azure.microsoft.com/en-us/documentation/articles/azure-subscription-service-limits/>

Question: 10

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company is planning to migrate all their virtual machines to an Azure pay-as-you-go subscription. The virtual machines are currently hosted on the Hyper-V hosts in a data center.

You are required make sure that the intended Azure solution uses the correct expenditure model.

Solution: You should recommend the use of the elastic expenditure model.

Does the solution meet the goal?

- A. Yes

B. No

Answer: B

Explanation:

Elasticity is not an expenditure model rather is one of the characteristics of cloud computing.

<https://azure.microsoft.com/en-us/overview/what-is-elastic-computing/>

The basic advantage of cloud computing is shifting your high Capital Expenditure (CAPEX) requirements to optimal Pay -As-You-Go model which is Operational Expenditure (OPEX)

<https://azure.microsoft.com/en-us/pricing/purchase-options/pay-as-you-go/>

Question: 11

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company is planning to migrate all their virtual machines to an Azure pay-as-you-go subscription. The virtual machines are currently hosted on the Hyper-V hosts in a data center.

You are required make sure that the intended Azure solution uses the correct expenditure model.

Solution: You should recommend the use of the scalable expenditure model.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Answer is NO. Because we have two expenditure models. One is Cap-Ex, another is Op-Ex. So Scalable Expenditure is not the right answer.

Question: 12

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company is planning to migrate all their virtual machines to an Azure pay-as-you-go subscription. The virtual machines are currently hosted on the Hyper-V hosts in a data center.

You are required make sure that the intended Azure solution uses the correct expenditure model.

Solution: You should recommend the use of the operational expenditure model.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Answer is Yes.

Operating expenditures are ongoing costs of doing business. Consuming cloud services in a pay-as-you-go

model could qualify as an operating expenditure.

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/strategy/business-outcomes/fiscal-outcomes>

Question: 13

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are required to deploy an Artificial Intelligence (AI) solution in Azure.

You want to make sure that you are able to build, test, and deploy predictive analytics for the solution.

Solution: You should make use of Azure Cosmos DB.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Machine Learning Studio (classic) is a drag-and-drop tool you can use to build, test, and deploy predictive analytics solutions

Azure Cosmos DB is a fully managed NoSQL database for modern app development.

AI Fits with ML not with Cosmos DB so ANs B

Question: 14

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's Active Directory forest includes thousands of user accounts.

You have been informed that all network resources will be migrated to Azure. Thereafter, the on-premises data center will be retired.

You are required to employ a strategy that reduces the effect on users, once the planned migration has been completed.

Solution: You plan to sync all the Active Directory user accounts to Azure Active Directory (Azure AD).

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Use Azure AD Connect to do this.

Question: 15

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are required to deploy an Artificial Intelligence (AI) solution in Azure.

You want to make sure that you are able to build, test, and deploy predictive analytics for the solution.

Solution: You should make use of Azure Machine Learning Studio.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Machine Learning Studio (classic) is a drag-and-drop tool you can use to build, test, and deploy predictive analytics solutions.

<https://docs.microsoft.com/bs-cyrl-ba/azure/machine-learning/classic/>

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's infrastructure includes a number of business units that each need a large number of various Azure resources for everyday operation.

The resources required by each business unit are identical.

You are required to sanction a strategy to create Azure resources automatically.

Solution: You recommend that the Azure API Management service be included in the strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Azure API Management Service (APIM) is a way to create and manage customer APIs for existing backend services. The question is asking about a way to create Azure resources automatically (on the fly). ARM (Azure Resource Manager) is a tool that automates the deployments on the AZ cloud.

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's infrastructure includes a number of business units that each need a large number of various Azure resources for everyday operation.

The resources required by each business unit are identical.

You are required to sanction a strategy to create Azure resources automatically.

Solution: You recommend that management groups be included in the strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

B is correct. It should be ARM template.

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/templates/overview>

To meet these challenges, you can automate deployments and use the practice of infrastructure as code. In code, you define the infrastructure that needs to be deployed. The infrastructure code becomes part of your project. Just like application code, you store the infrastructure code in a source repository and version it. Any one on your team can run the code and deploy similar environments.

CertyIQ**Question: 18**

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's infrastructure includes a number of business units that each need a large number of various Azure resources for everyday operation.

The resources required by each business unit are identical.

You are required to sanction a strategy to create Azure resources automatically.

Solution: You recommend that the Azure Resource Manager templates be included in the strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer: A**Explanation:**

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/templates/overview>

To meet these challenges, you can automate deployments and use the practice of infrastructure as code. In code, you define the infrastructure that needs to be deployed. The infrastructure code becomes part of your project. Just like application code, you store the infrastructure code in a source repository and version it. Any one on your team can run the code and deploy similar environments.

CertyIQ**Question: 19**

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying a critical LOB application, which will be installed on a virtual machine, to Azure.

You are informed that the application deployment strategy should allow for a guaranteed availability of 99.99 percent. You need to make sure that the strategy requires as little virtual machines and availability zones as possible.

Solution: You include two virtual machines and one availability zone in your strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer: B**Explanation:**

Answer is NO

For all Virtual Machines that have two or more instances deployed across two or more Availability Zones in the same Azure region, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.99% of the time.

For all Virtual Machines that have two or more instances deployed in the same Availability Set or in the same Dedicated Host Group, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.95% of the time.

References:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

Question: 20

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying a critical LOB application, which will be installed on a virtual machine, to Azure. You are informed that the application deployment strategy should allow for a guaranteed availability of 99.99 percent. You need to make sure that the strategy requires as little virtual machines and availability zones as possible.

Solution: You include one virtual machine and two availability zones in your strategy.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The answer is NO.

<https://docs.microsoft.com/en-us/azure/architecture/framework/services/compute/virtual-machines/operational-excellence>

95% SLA for single instance virtual machines using Standard HDD-Managed Disks for OS and Data disks.

99.5% SLA for single instance virtual machines using Standard SSD-Managed Disks for OS and Data disks.

99.9% SLA for single instance virtual machines using Premium SSD or Ultra Disk for all OS and Data disks.

99.95% SLA for all virtual machines that have two or more instances in the same Availability Set or Dedicated Host Group.

99.99% SLA for all virtual machines that have two or more instances deployed across two or more Availability Zones in the same region.

References:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

Question: 21

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are tasked with deploying a critical LOB application, which will be installed on a virtual machine, to Azure.

You are informed that the application deployment strategy should allow for a guaranteed availability of 99.99 percent. You need to make sure that the strategy requires as little virtual machines and availability zones as possible.

Solution: You include two virtual machines and two availability zones in your strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

2VMs + 2 Zones equal great fail over and 99.9% uptime

For all Virtual Machines that have two or more instances deployed across two or more Availability Zones in the same Azure region, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.99% of the time.

For all Virtual Machines that have two or more instances deployed in the same Availability Set or in the same Dedicated Host Group, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.95% of the time.

For any Single Instance Virtual Machine using Premium SSD or Ultra Disk for all Operating System Disks and Data Disks, we guarantee you will have Virtual Machine Connectivity of at least 99.9%.

For any Single Instance Virtual Machine using Standard SSD Managed Disks for Operating System Disk and Data Disks, we guarantee you will have Virtual Machine Connectivity of at least 99.5%.

For any Single Instance Virtual Machine using Standard HDD Managed Disks for Operating System Disks and Data Disks, we guarantee you will have Virtual Machine Connectivity of at least 95%.

References:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

Question: 22

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's developers intend to deploy a large number of custom virtual machines on a weekly basis. They will also be removing these virtual machines during the same week it was deployed. Sixty percent of the virtual machines have Windows Server 2016 installed, while the other forty percent has Ubuntu Linux installed.

You are required to make sure that the administrative effort, needed for this process, is reduced by employing a suitable Azure service.

Solution: You recommend the use of Microsoft Managed Desktop.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Answer correct. It is not Microsoft Managed Desktop. The correct answer should be Azure DevTest Labs.

Welcome to Microsoft Managed Desktop

Microsoft Managed Desktop brings together Microsoft 365 Enterprise, cloud-based device management by Microsoft, and security monitoring, enabling you to free your IT team to focus on core business needs. Currently, the Microsoft Managed Desktop service is offered only by invitation. Learn more on Microsoft docs or contact your Microsoft account manager. If you're unfamiliar with Microsoft Managed Desktop, learn more about the service.

Question: 23

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's developers intend to deploy a large number of custom virtual machines on a weekly basis. They will also be removing these virtual machines during the same week it was deployed. Sixty percent of the virtual machines have Windows Server 2016 installed, while the other forty percent has Ubuntu Linux installed.

You are required to make sure that the administrative effort, needed for this process, is reduced by employing a suitable Azure service.

Solution: You recommend the use of Azure Reserved Virtual Machines (VM) Instances.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

The correct answer is B.

Azure DevTest Labs enable you to quickly create environments using reusable templates and artifacts.

Reserved not a tool, it is a method pricing

Question: 24

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's developers intend to deploy a large number of custom virtual machines on a weekly basis. They will also be removing these virtual machines during the same week it was deployed. Sixty percent of the virtual machines have Windows Server 2016 installed, while the other forty percent has Ubuntu Linux installed.

You are required to make sure that the administrative effort, needed for this process, is reduced by employing a suitable Azure service.

Solution: You recommend the use of Azure DevTest Labs.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Use DevTest Labs for free*

Quickly provision development and test environments

Minimize waste with quotas and policies

Set automated shutdowns to minimize costs

Build Windows and Linux environments

Question: 25

CertyIQ

Your company has virtual machines (VMs) hosted in Microsoft Azure. The VMs are located in a single Azure virtual network named VNet1.

The company has users that work remotely. The remote workers require access to the VMs on VNet1.

You need to provide access for the remote workers.

What should you do?

- A. Configure a Site-to-Site (S2S) VPN.
- B. Configure a VNet-toVNet VPN.
- C. Configure a Point-to-Site (P2S) VPN.
- D. Configure DirectAccess on a Windows Server 2012 server VM.
- E. Configure a Multi-Site VPN

Answer: C

Explanation:

A Point-to-Site (P2S) VPN gateway connection lets you create a secure connection to your virtual network from an individual client computer.

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-about-vpngateways>

Question: 26

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You have been informed by your superiors of the company's intentions to automate server deployment to Azure. There is, however, some concern that administrative credentials could be uncovered during this process.

You are required to make sure that during the deployment, the administrative credentials are encrypted using a suitable Azure solution.

Solution: You recommend the use of Azure Information Protection.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

B. No, answer -> It should be Key Vault

Azure Information Protection (AIP) is a cloud-based solution that enables organizations to discover, classify, and protect documents and emails by applying labels to content.

Question: 27

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You have been informed by your superiors of the company's intentions to automate server deployment to Azure.

There is, however, some concern that administrative credentials could be uncovered during this process.

You are required to make sure that during the deployment, the administrative credentials are encrypted using a suitable Azure solution.

Solution: You recommend the use of Azure Multi-Factor Authentication (MFA).

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

B. No - does not meet goal due to MFA is used to add authentication layer for user access, not to encrypt credentials. Correct solution is Azure Key Vault.

Question: 28

CertyIQ

DRAG DROP -

The company would like to develop a cloud solution by making use of Azure Government. Azure Government can only be used by certain types of clients to develop cloud solutions.

Which of the following are the types of customers that can make use of Azure Government in this situation?

Answer by dragging the correct option from the list to the answer area.

Select and Place:

Options

Answer

A government contractor from any country.

A government entity from any country.

A European government contractor.

A European government entity.

A United States government contractor.

A United States government entity.

Answer:

Options

A government contractor from any country.

A government entity from any country.

A European government contractor.

A European government entity.

A United States government contractor.

A United States government entity.

Answer

A United States government contractor.

A United States government entity.

Explanation:

Azure Government is the mission-critical cloud, delivering breakthrough innovation to US government customers and their partners. Only US federal, state, local, and tribal governments and their partners have access to this dedicated instance. (<https://azure.microsoft.com/en-us/global-infrastructure/government/get-started/>)

References:

<https://docs.microsoft.com/en-us/learn/modules/intro-to-azure-government/2-what-is-azure-government>

Question: 29

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company has an Azure Active Directory (Azure AD) environment. Users occasionally connect to Azure AD via the Internet.

You have been tasked with making sure that users who connect to Azure AD via the internet from an unidentified IP address, are automatically encouraged to change passwords.

Solution: You configure the use of Azure AD Identity Protection.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: A**Explanation:**

Risk detection and remediation

Identity Protection identifies risks of many types, including:

Anonymous IP address use

Atypical travel

Malware linked IP address

Unfamiliar sign-in properties

Leaked credentials

Password spray

References:

<https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-sign-in-risk-policy>

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company has an Azure Active Directory (Azure AD) environment. Users occasionally connect to Azure AD via the Internet.

You have been tasked with making sure that users who connect to Azure AD via the internet from an unidentified IP address, are automatically encouraged to change passwords.

Solution: You configure the use of Azure AD Privileged Identity Management.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B**Explanation:**

Answer is No

Azure Information Protection (AIP) is a cloud-based solution that enables organizations to discover, classify, and protect documents and emails by applying labels to content.

Solution : Azure Key Vault

Privileged Identity Management provides time-based and approval-based role activation to mitigate the risks of excessive, unnecessary, or misused access permissions on resources that you care about. Here are some of the key features of Privileged Identity Management:

Provide just-in-time privileged access to Azure AD and Azure resources

Assign time-bound access to resources using start and end dates

Require approval to activate privileged roles
Enforce multi-factor authentication to activate any role
Use justification to understand why users activate
Get notifications when privileged roles are activated
Conduct access reviews to ensure users still need roles
Download audit history for internal or external audit
Prevents removal of the last active Global Administrator role assignment

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-sign-in-risk-policy>

Question: 31

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are planning a strategy to deploy numerous web servers and database servers to Azure.

This strategy should allow for connection types between the web servers and database servers to be controlled.

Solution: You include network security groups (NSGs) in your strategy.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

You can use an Azure network security group to filter network traffic to and from Azure resources in an Azure virtual network. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources. For each rule, you can specify source and destination, port, and protocol.

Question: 32

CertyIQ

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

You are planning a strategy to deploy numerous web servers and database servers to Azure.

This strategy should allow for connection types between the web servers and database servers to be controlled.

Solution: You include a local network gateway in your strategy.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

B. No - the local NG is to connect between local and virtual networks (or VPN for private access). The Network Security Group would meet the goal.

CertyIQ

Question: 33

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's Active Directory forest includes thousands of user accounts.

You have been informed that all network resources will be migrated to Azure. Thereafter, the on-premises data center will be retired.

You are required to employ a strategy that reduces the effect on users, once the planned migration has been completed.

Solution: You plan to require Azure Multi-Factor Authentication (MFA).

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

MFA is not going to help reduce the issues with users. It will tighten security but what you really need here is Azure Sync to AAD

"You are required to employ a strategy that reduces the effect on users, once the planned migration has been completed.". Multi-factor authentication doesn't reduce the effect or have any kind of effect on this issue.

MFA is used to verify the reinforce the security to identify a user, but it doesn't help at all in arranging the user's accounts

CertyIQ

Question: 34

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A platform as a service (PaaS) solution that hosts web apps in Azure provides full control of the operating systems that host applications.	<input type="radio"/>	<input type="radio"/>
A platform as a service (PaaS) solution that hosts web apps in Azure provides the ability to scale the platform automatically.	<input type="radio"/>	<input type="radio"/>
A platform as a service (PaaS) solution that hosts web apps in Azure provides professional development services to continuously add features to custom applications.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements

Yes

No

A platform as a service (PaaS) solution that hosts web apps in Azure provides full control of the operating systems that host applications.

A platform as a service (PaaS) solution that hosts web apps in Azure provides the ability to scale the platform automatically.

A platform as a service (PaaS) solution that hosts web apps in Azure provides professional development services to continuously add features to custom applications.

Explanation:

Box 1: No -

A PaaS solution does not provide access to the operating system. The Azure Web Apps service provides an environment for you to host your web applications.

Behind the scenes, the web apps are hosted on virtual machines running IIS. However, you have no direct access to the virtual machine, the operating system or IIS.

Box 2: Yes -

A PaaS solution that hosts web apps in Azure does provide the ability to scale the platform automatically. This is known as autoscaling. Behind the scenes, the web apps are hosted on virtual machines running IIS.

Autoscaling means adding more load balanced virtual machines to host the web apps.

Box 3: Yes -

PaaS provides a framework that developers can build upon to develop or customize cloud-based applications. PaaS development tools can cut the time it takes to code new apps with pre-coded application components built into the platform, such as workflow, directory services, security features, search and so on.

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-paas/>

Question: 35

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure provides flexibility between capital expenditure (CapEx) and operational expenditure (OpEx).	<input type="radio"/>	<input type="radio"/>
If you create two Azure virtual machines that use the B2S size, each virtual machine will always generate the same monthly costs.	<input type="radio"/>	<input type="radio"/>
When an Azure virtual machine is stopped, you continue to pay storage costs associated to the virtual machine.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure provides flexibility between capital expenditure (CapEx) and operational expenditure (OpEx).	<input checked="" type="radio"/>	<input type="radio"/>
If you create two Azure virtual machines that use the B2S size, each virtual machine will always generate the same monthly costs.	<input type="radio"/>	<input checked="" type="radio"/>
When an Azure virtual machine is stopped, you continue to pay storage costs associated to the virtual machine.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

Traditionally, IT expenses have been considered a Capital Expenditure (CapEx). Today, with the move to the cloud and the pay-as-you-go model, organizations have the ability to stretch their budgets and are shifting their IT CapEx costs to Operating Expenditures (OpEx) instead. This flexibility, in accounting terms, is now an option due to the as a Service model of purchasing software, cloud storage and other IT related resources.

Box 2: No -

Two virtual machines using the same size could have different disk configurations. Therefore, the monthly costs could be different.

Box 3: Yes -

When an Azure virtual machine is stopped, you don't pay for the virtual machine. However, you do still pay for the storage costs associated to the virtual machine.

The most common storage costs are for the disks attached to the virtual machines. There are also other storage costs associated with a virtual machine such as storage for diagnostic data and virtual machine backups.

<https://meritsolutions.com/capex-vs-opex-cloud-computing-blog/>

Question: 36

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

When you are implementing a Software as a Service (SaaS) solution, you are responsible for

- configuring high availability.
- defining scalability rules.
- installing the SaaS solution.
- configuring the SaaS solution.

Answer:

Answer Area

When you are implementing a Software as a Service (SaaS) solution, you are responsible for

- configuring high availability.
- defining scalability rules.
- installing the SaaS solution.
- configuring the SaaS solution.

Explanation:

When you are implementing a Software as a Service (SaaS) solution, you are responsible for configuring the SaaS solution. Everything else is managed by the cloud provider.

SaaS requires the least amount of management. The cloud provider is responsible for managing everything, and the end user just uses the software.

Software as a service (SaaS) allows users to connect to and use cloud-based apps over the Internet. Common examples are email, calendaring and office tools (such as Microsoft Office 365).

SaaS provides a complete software solution which you purchase on a pay-as-you-go basis from a cloud service provider. You rent the use of an app for your organization and your users connect to it over the Internet, usually with a web browser. All of the underlying infrastructure, middleware, app software and app data are located in the service provider's data center. The service provider manages the hardware and software and with the appropriate service agreement, will ensure the availability and the security of the app and your data as well.

Reference:

<https://azure.microsoft.com/en-in/overview/what-is-saas/>

<https://docs.microsoft.com/en-gb/learn/modules/principles-cloud-computing/5-types-of-cloud-services>

Question: 37

CertyIQ

You have an on-premises network that contains several servers.

You plan to migrate all the servers to Azure.

You need to recommend a solution to ensure that some of the servers are available if a single Azure data center goes offline for an extended period.

What should you include in the recommendation?

- A. fault tolerance
- B. elasticity
- C. scalability
- D. low latency

Answer: A

Explanation:

Fault tolerance is the ability of a system to continue to function in the event of a failure of some of its components.

In this question, you could have servers that are replicated across datacenters.

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. Availability Zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. To ensure resiliency, there are a minimum of three separate zones in all enabled regions. The physical separation of Availability Zones within a region protects applications and data from datacenter failures.

With Availability Zones, Azure offers industry best 99.99% VM uptime SLA. By architecting your solutions to use replicated VMs in zones, you can protect your applications and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/manage-availability>

Question: 38

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An organization that hosts its infrastructure

no longer requires a data center.

in a private cloud
in a hybrid cloud
in the public cloud
on a Hyper-V host

Answer:

Answer Area

An organization that hosts its infrastructure

no longer requires a data center.

in a private cloud
in a hybrid cloud
in the public cloud
on a Hyper-V host

Explanation:

A private cloud is hosted in your datacenter. Therefore, you cannot close your datacenter if you are using a private cloud.

A public cloud is hosted externally, for example, in Microsoft Azure. An organization that hosts its infrastructure in a public cloud can close its data center.

Public cloud is the most common deployment model. In this case, you have no local hardware to manage or keep up-to-date " everything runs on your cloud provider's hardware.

Microsoft Azure is an example of a public cloud provider.

In a private cloud, you create a cloud environment in your own datacenter and provide self-service access to compute resources to users in your organization.

This offers a simulation of a public cloud to your users, but you remain completely responsible for the purchase and maintenance of the hardware and software services you provide.

Reference:

<https://docs.microsoft.com/en-gb/learn/modules/principles-cloud-computing/4-cloud-deployment-models>

Question: 39

CertyIQ

What are two characteristics of the public cloud? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. dedicated hardware
- B. unsecured connections
- C. limited storage
- D. metered pricing
- E. self-service management

Answer: DE

Explanation:

With the public cloud, you get pay-as-you-go pricing " you pay only for what you use, no CapEx costs.

With the public cloud, you have self-service management. You are responsible for the deployment and configuration of the cloud resources such as virtual machines or web sites. The underlying hardware that hosts the cloud resources is managed by the cloud provider.

Incorrect Answers:

A: You don't have dedicated hardware. The underlying hardware is shared so you could have multiple customers using cloud resources hosted on the same physical hardware.

B: Connections to the public cloud are secure.

C: Storage is not limited. You can have as much storage as you like.

Reference:

<https://docs.microsoft.com/en-gb/learn/modules/principles-cloud-computing/4-cloud-deployment-models>

Question: 40

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

When planning to migrate a public website to Azure,
you must plan to

- deploy a VPN.
- pay monthly usage costs.
- pay to transfer all the website data to Azure.
- reduce the number of connections to the website.

Answer:

Answer Area

When planning to migrate a public website to Azure,
you must plan to

- deploy a VPN.
- pay monthly usage costs.
- pay to transfer all the website data to Azure.
- reduce the number of connections to the website.

Explanation:

When planning to migrate a public website to Azure, you must plan to pay monthly usage costs. This is because Azure uses the pay-as-you-go model.

Question: 41

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct

solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to migrate all its data and resources to Azure.

The company's migration plan states that only Platform as a Service (PaaS) solutions must be used in Azure.

You need to deploy an Azure environment that meets the company migration plan.

Solution: You create an Azure App Service and Azure SQL databases.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Azure App Service and Azure SQL databases are examples of Azure PaaS solutions. Therefore, this solution does meet the goal.

Question: 42

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to migrate all its data and resources to Azure.

The company's migration plan states that only Platform as a Service (PaaS) solutions must be used in Azure.

You need to deploy an Azure environment that meets the company migration plan.

Solution: You create an Azure App Service and Azure virtual machines that have Microsoft SQL Server installed.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

1. Azure Disk Storage is IaaS and Azure Blob Storage is PaaS. So it has not mentioned properly which service the developer used so the answer is no

2. VM = IaaS where App Service I remember as something like Docker which is a Platform No would be the correct answer here because of the VM.

Question: 43

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to migrate all its data and resources to Azure.

The company's migration plan states that only Platform as a Service (PaaS) solutions must be used in Azure.

You need to deploy an Azure environment that meets the company migration plan.

Solution: You create an Azure App Service and Azure Storage accounts.

Does this meet the goal?

A. Yes

B. No

Answer: B**Explanation:**

Azure Storage is a PaaS

Azure Storage ACCOUNTS are not. Therefore B, No.

An Azure Storage Account is not IaaS or PaaS because it is not a "service". An Azure Storage Account is a container for one of the Azure storage solutions; Azure Disk Storage(IaaS), Azure Blob Storage(PaaS), and Azure File Storage(SaaS).

<https://docs.microsoft.com/en-us/learn/modules/azure-networking-fundamentals/azure-virtual-network-fundamentals>

CertyIQ**Question: 44**

Your company hosts an accounting application named App1 that is used by all the customers of the company. App1 has low usage during the first three weeks of each month and very high usage during the last week of each month.

Which benefit of Azure Cloud Services supports cost management for this type of usage pattern?

- A. high availability
- B. high latency
- C. elasticity
- D. load balancing

Answer: C**Explanation:**

Elasticity in this case is the ability to provide additional compute resource when needed and reduce the compute resource when not needed to reduce costs.

Autoscaling is an example of elasticity.

Elastic computing is the ability to quickly expand or decrease computer processing, memory and storage resources to meet changing demands without worrying about capacity planning and engineering for peak usage. Typically controlled by system monitoring tools, elastic computing matches the amount of resources allocated to the amount of resources actually needed without disrupting operations. With cloud elasticity, a company avoids paying for unused capacity or idle resources and doesn't have to worry about investing in the purchase or maintenance of additional resources and equipment.

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-elastic-computing/>

CertyIQ**Question: 45**

You plan to migrate a web application to Azure. The web application is accessed by external users. You need to recommend a cloud deployment solution to minimize the amount of administrative effort used to manage the web application.

What should you include in the recommendation?

- A. Software as a Service (SaaS)
- B. Platform as a Service (PaaS)
- C. Infrastructure as a Service (IaaS)

D. Database as a Service (DaaS)

Answer: B

Explanation:

The keywords are "migrate" and "administration"

Azure App Service is a platform-as-a-service (PaaS) offering that lets you create web and mobile apps for any platform or device and connect to data anywhere, in the cloud or on-premises. App Service includes the web and mobile capabilities that were previously delivered separately as Azure Websites and Azure Mobile Services.

References:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/paas-applications-using-app-services>

Question: 46

CertyIQ

HOTSPOT -

Which cloud deployment solution is used for Azure virtual machines and Azure SQL databases? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Azure virtual machines:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Azure SQL databases:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Answer:

Answer Area

Azure virtual machines:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Azure SQL databases:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Explanation:

Box 1:

Azure virtual machines are Infrastructure as a Service (IaaS).

Infrastructure as a Service is the most flexible category of cloud services. It aims to give you complete control over the hardware that runs your application (IT infrastructure servers and virtual machines (VMs), storage, networks, and operating systems). Instead of buying hardware, with IaaS, you rent it.

Box 2:

Azure SQL databases are Platform as a Service (PaaS).

Azure SQL Database is a fully managed Platform as a Service (PaaS) Database Engine that handles most of the database management functions such as upgrading, patching, backups, and monitoring without user involvement. Azure SQL Database is always running on the latest stable version of SQL Server

Database Engine and patched OS with 99.99% availability. PaaS capabilities that are built-in into Azure SQL database enable you to focus on the domain specific database administration and optimization activities that are critical for your business.

Reference:

<https://docs.microsoft.com/en-gb/learn/modules/principles-cloud-computing/5-types-of-cloud-services> <https://docs.microsoft.com/en-us/azure/sql-database/sql-database-paas-index>

Question: 47

CertyIQ

You have an on-premises network that contains 100 servers.

You need to recommend a solution that provides additional resources to your users. The solution must minimize capital and operational expenditure costs.

What should you include in the recommendation?

- A. a complete migration to the public cloud
- B. an additional data center
- C. a private cloud
- D. a hybrid cloud

Answer: D

Explanation:

Correct answer is D - Hybrid cloud. Utilize current resources and dynamically scale in public cloud if and when needed.

A hybrid cloud is a combination of a private cloud and a public cloud.

Capital expenditure is the spending of money up-front for infrastructure such as new servers.

With a hybrid cloud, you can continue to use the on-premises servers while adding new servers in the public cloud (Azure for example). Adding new servers in

Azure minimizes the capital expenditure costs as you are not paying for new servers as you would if you deployed new server on-premises.

Incorrect Answers:

A: A complete migration of 100 servers to the public cloud would involve a lot of operational expenditure (the cost of migrating all the servers).

B: An additional data center would involve a lot of capital expenditure (the cost of the new infrastructure).

C: A private cloud is hosted on on-premises servers so this would involve a lot of capital expenditure (the cost of the new infrastructure to host the private cloud).

Reference:

<https://docs.microsoft.com/en-gb/learn/modules/principles-cloud-computing/4-cloud-deployment-models>

Question: 48

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
To achieve a hybrid cloud model, a company must always migrate from a private cloud model.	<input type="radio"/>	<input type="radio"/>
A company can extend the capacity of its internal network by using the public cloud.	<input type="radio"/>	<input type="radio"/>
In a public cloud model, only guest users at your company can access the resources in the cloud.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
To achieve a hybrid cloud model, a company must always migrate from a private cloud model.	<input type="radio"/>	<input checked="" type="radio"/>
A company can extend the capacity of its internal network by using the public cloud.	<input checked="" type="radio"/>	<input type="radio"/>
In a public cloud model, only guest users at your company can access the resources in the cloud.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

It is not true that a company must always migrate from a private cloud model to implement a hybrid cloud. You could start with a public cloud and then combine that with an on-premise infrastructure to implement a hybrid

cloud.

Box 2: Yes -

A company can extend the capacity of its internal network by using the public cloud. This is very common. When you need more capacity, rather than pay out for new on-premises infrastructure, you can configure a cloud environment and connect your on-premises network to the cloud environment by using a VPN.

Box 3: No -

It is not true that only guest users can access cloud resources. You can give anyone with an account in Azure Active Directory access to the cloud resources.

There are many authentication scenarios but a common one is to replicate your on-premises Active Directory accounts to Azure Active Directory and provide access to the Azure Active Directory accounts. Another commonly used authentication method is 'Federation' where authentication for access to cloud resources is passed to another authentication provider such as an on-premises Active Directory.

<https://azure.microsoft.com/en-gb/overview/what-is-hybrid-cloud-computing/>

CertyIQ

Question: 49

You plan to migrate several servers from an on-premises network to Azure.

What is an advantage of using a public cloud service for the servers over an on-premises network?

- A. The public cloud is owned by the public, NOT a private corporation
- B. The public cloud is a crowd-sourcing solution that provides corporations with the ability to enhance the cloud
- C. All public cloud resources can be freely accessed by every member of the public
- D. The public cloud is a shared entity whereby multiple corporations each use a portion of the resources in the cloud

Answer: D

Explanation:

The public cloud is a shared entity whereby multiple corporations each use a portion of the resources in the cloud. The hardware resources (servers, infrastructure etc.) are managed by the cloud provider. Multiple companies create resources such as virtual machines and virtual networks on the hardware resources.

Incorrect Answers:

A: The public cloud is not owned by the public. In the case of Microsoft Azure, the cloud is owned by Microsoft.

B: The public cloud is not a crowd-sourcing solution. In the case of Microsoft Azure, the cloud is owned by Microsoft.

C: It is not true that public cloud resources can be freely accessed by every member of the public. You pay for a cloud subscription and create accounts for your users to access your cloud resources. No one can access your cloud resources until you create user accounts and provide the appropriate access permissions.

CertyIQ

Question: 50

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Azure Site Recovery provides

fault tolerance
disaster recovery
elasticity
high availability

for virtual machines.

Answer:

Answer Area

Azure Site Recovery provides

fault tolerance
disaster recovery
elasticity
high availability

for virtual machines.

Explanation:

The answer is Disaster Recovery.

Azure Site Recovery is a disaster recovery service provided by Microsoft Azure, which can be used to protect and recover virtual machines. You can find more information on this service on the Azure website:

[https://azure.microsoft.com/en-us/services/site-recovery/ .](https://azure.microsoft.com/en-us/services/site-recovery/)

Question: 51

CertyIQ

In which type of cloud model are all the hardware resources owned by a third-party and shared between multiple tenants?

- A. private
- B. hybrid
- C. public

Answer: C

Explanation:

Private cloud-taken care by the internal organization to which it belongs

Public cloud-entirely taken care by 3rd party such as Azure, AWS, GCP

Hybrid cloud-combination of on-premises (private)as well as public(3rd party)

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An Azure web app that queries an on-premises Microsoft SQL server is an example of a  cloud.

- hybrid
- multi-vendor
- private
- public

Answer:**Answer Area**

An Azure web app that queries an on-premises Microsoft SQL server is an example of a  cloud.

- hybrid
- multi-vendor
- private
- public

Explanation:

hybrid cloud – sometimes called a cloud hybrid – is a computing environment that combines an on-premises datacentre (also called a private cloud) with a public cloud, allowing data and applications to be shared between them. Some people define hybrid cloud to include “multi-cloud” configurations where an organisation uses more than one public cloud in addition to their on-premises datacentre

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-hybrid-cloud-computing/>

You have 1,000 virtual machines hosted on the Hyper-V hosts in a data center.

You plan to migrate all the virtual machines to an Azure pay-as-you-go subscription.

You need to identify which expenditure model to use for the planned Azure solution.
Which expenditure model should you identify?

- A. operational
- B. elastic
- C. capital
- D. scalable

Answer: A

Explanation:

One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it). This switch also requires more careful management of your costs. The benefit of the cloud is that you can fundamentally and positively affect the cost of a service you use by merely shutting down or resizing it when it's not needed.

The expenditure models are either CapEx or OpEx (Capital or Operational). CapEx is what you pay upfront, on prem, for servers, racks, cooling, security, the Datacenter itself. OpEx is what you pay to keep your infrastructure operational, like IT staff. In this case, when you move to the Cloud, what you identify in this case is the OpEx or Operational model. This is because you actually don't have CapEx on the Cloud (or at least you look to minimize CapEx) as you pay for the resources you use and not for the underlying hardware, security, cooling, etc that you will pay for in an On-Prem solution. That is why the right answer is (A) Operational. Elastic and Scalable are not expenditure models.

Reference:

<https://docs.microsoft.com/en-us/azure/architecture/cloud-adoption/appendix/azure-scaffold>

Question: 54

CertyIQ

DRAG DROP -

Match the Azure services benefits to the correct descriptions.

Instructions: To answer, drag the appropriate benefit from the column on the left to its description on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Options

Answer Area

Disaster recovery

A cloud service that remains available after a failure occurs

Fault tolerance

A cloud service that can be recovered after a failure occurs

Low latency

A cloud service that performs quickly when demand increases

Dynamic scalability

A cloud service that can be accessed quickly from the Internet.

Answer:

Answer Options**Answer Area**

- A cloud service that remains available after a failure occurs
- A cloud service that can be recovered after a failure occurs
- A cloud service that performs quickly when demand increases
- A cloud service that can be accessed quickly from the Internet.

Fault tolerance

Disaster recovery

Dynamic scalability

Low latency

Explanation:

Box 1:

Fault tolerance is the ability of a service to remain available after a failure of one of the components of the service. For example, a service running on multiple servers can withstand the failure of one of the servers.

Box 2:

Disaster recovery is the recovery of a service after a failure. For example, restoring a virtual machine from backup after a virtual machine failure.

Box 3:

Dynamic scalability is the ability for compute resources to be added to a service when the service is under heavy load. For example, in a virtual machine scale set, additional instances of the virtual machine are added when the existing virtual machines are under heavy load.

Box 4:

Latency is the time a service to respond to requests. For example, the time it takes for a web page to be returned from a web server. Low latency means low response time which means a quicker response.

Question: 55**CertyIQ****HOTSPOT -**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
To implement a hybrid cloud model, a company must have an internal network.	<input type="radio"/>	<input type="radio"/>
A company can extend the computing resources of its internal network by using a hybrid cloud.	<input type="radio"/>	<input type="radio"/>
In a public cloud model, only guest users at your company can access the resources in the cloud.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
To implement a hybrid cloud model, a company must have an internal network.	<input checked="" type="radio"/>	<input type="radio"/>
A company can extend the computing resources of its internal network by using a hybrid cloud.	<input checked="" type="radio"/>	<input type="radio"/>
In a public cloud model, only guest users at your company can access the resources in the cloud.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes

Box 2: Yes -

A company can extend the computing resources of its internal network by using the public cloud. This is very common. When you need more resources, rather than pay out for new on-premises infrastructure, you can configure a cloud environment and connect your on-premises network to the cloud environment by using a VPN.

Box 3: No -

It is not true that only guest users can access cloud resources. You can give anyone with an account in Azure Active Directory access to the cloud resources.

There are many authentication scenarios but a common one is to replicate your on-premises Active Directory accounts to Azure Active Directory and provide access to the Azure Active Directory accounts. Another commonly used authentication method is 'Federation' where authentication for access to cloud resources is passed to another authentication provider such as an on-premises Active Directory.

Question: 56

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A Platform as a Service (PaaS) solution provides full control of operating systems that host applications.	<input type="radio"/>	<input type="radio"/>
A Platform as a Service (PaaS) solution provides additional memory to apps by changing pricing tiers.	<input type="radio"/>	<input type="radio"/>
A Platform as a Service (PaaS) solution can automatically scale the number of instances.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A Platform as a Service (PaaS) solution provides full control of operating systems that host applications.	<input type="radio"/>	<input checked="" type="radio"/>
A Platform as a Service (PaaS) solution provides additional memory to apps by changing pricing tiers.	<input checked="" type="radio"/>	<input type="radio"/>
A Platform as a Service (PaaS) solution can automatically scale the number of instances.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No

Yes

Yes

(PaaS) solution DOES NOT provide full control of operating systems that host applications.

(PaaS) solution provides additional memory to apps by changing pricing tiers.

(PaaS) solution can automatically scale the number of instances.

CertyIQ

Question: 57

Your company has an on-premises network that contains multiple servers.

The company plans to reduce the following administrative responsibilities:

- ⇒ Backing up application data
- ⇒ Replacing failed server hardware
- ⇒ Managing physical server security
- ⇒ Updating server operating systems
- ⇒ Managing permissions to shared documents

The company plans to migrate servers to Azure virtual machines.

You need to identify which administrative responsibilities will be eliminated after the planned migration.

Which two responsibilities should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Replacing failed server hardware
- B. Backing up application data
- C. Managing physical server security
- D. Updating server operating systems
- E. Managing permissions to shared documents

Answer: AC

Explanation:

Azure virtual machines run on Hyper-V physical servers. The physical servers are owned and managed by Microsoft. As an Azure customer, you have no access to the physical servers. Microsoft manage the replacement of failed server hardware and the security of the physical servers so you don't need to.

Incorrect Answers:

B: Microsoft have no control over the applications you run on the virtual machines. Therefore, it is your responsibility to ensure that application data is backed up.

D: Microsoft do not manage the operating systems you run on the virtual machines. Therefore, it is your responsibility to ensure that the operating systems are updated.

E: Microsoft have no control over the shared folders you host on the virtual machines. Therefore, it is your responsibility to ensure that folder permissions are configured appropriately.

CertyIQ

Question: 58

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Pay-As-You-Go pricing is an example of CapEx.	<input type="radio"/>	<input type="radio"/>
Paying electricity for your datacenter is an example of OpEx.	<input type="radio"/>	<input type="radio"/>
Deploying your own datacenter is an example of CapEx.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Pay-As-You-Go pricing is an example of CapEx.	<input type="radio"/>	<input checked="" type="radio"/>
Paying electricity for your datacenter is an example of OpEx.	<input type="radio"/>	<input checked="" type="radio"/>
Deploying your own datacenter is an example of CapEx.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it).

Box 1: No -

With the pay-as-go model, you pay for services as you use them. This is Opex (Operational Expenditure), not CapEx (Capital Expenditure). CapEx is where you pay for something upfront. For example, buying a new physical server.

Box 2: No -

Paying for electricity for your own datacenter will be classed as CapEx, not OpEx.

Box 3: Yes -

Deploying your own datacenter is an example of CapEx. This is because you need to purchase all the infrastructure upfront before you can use it.

Reference:

<https://docs.microsoft.com/en-us/azure/architecture/cloud-adoption/appendix/azure-scaffold>

Question: 59

CertyIQ

You plan to provision Infrastructure as a Service (IaaS) resources in Azure.
Which resource is an example of IaaS?

- A. an Azure web app
- B. an Azure virtual machine
- C. an Azure logic app
- D. an Azure SQL database

Answer: B

Explanation:

An Azure virtual machine is an example of Infrastructure as a Service (IaaS).

Azure web app, Azure logic app and Azure SQL database are all examples of Platform as a Service (PaaS).

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-iaas/>

<https://azure.microsoft.com/en-gb/overview/what-is-paas/>

CertyIQ**Question: 60**

To which cloud models can you deploy physical servers?

- A. private cloud and hybrid cloud only
- B. private cloud only
- C. private cloud, hybrid cloud and public cloud
- D. hybrid cloud only

Answer: A**Explanation:**

A private cloud is on-premises so you can deploy physical servers.

A hybrid cloud is a mix of on-premise and public cloud resources. You can deploy physical servers on-premises.

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-hybrid-cloud-computing/>

CertyIQ**Question: 61**

DRAG DROP -

Match the cloud model to the correct advantage.

Instructions: To answer, drag the appropriate cloud model from the column on the left to its advantage on the right. Each cloud model may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point

Select and Place:

Cloud model	Work Area
Hybrid Cloud	No required capital expenditure.
Private Cloud	Provides complete control over security.
Public Cloud	Provides a choice to use on-premises or cloud-based resources.

Answer:

Cloud model	Work Area
Hybrid Cloud	No required capital expenditure.
Private Cloud	Provides complete control over security.
Public Cloud	Provides a choice to use on-premises or cloud-based resources.

Explanation:

Box 1: Public Cloud -

With a public cloud, there is no capital expenditure on server hardware etc. You only pay for cloud resources that you use as you use them.

Box 2: Private Cloud -

A private cloud exists on premises, so you have complete control over security.

Box 3: Hybrid Cloud -

A hybrid cloud is a mix of public cloud resources and on-premises resources. Therefore, you have a choice to use either.

Question: 62**CertyIQ****HOTSPOT -**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A company can extend a private cloud by adding its own physical servers to the public cloud.	<input type="radio"/>	<input type="radio"/>
To build a hybrid cloud, you must deploy resources to the public cloud.	<input type="radio"/>	<input type="radio"/>
A private cloud must be disconnected from the internet.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

Statements	Yes	No
A company can extend a private cloud by adding its own physical servers to the public cloud.	<input type="radio"/>	<input checked="" type="radio"/>
To build a hybrid cloud, you must deploy resources to the public cloud.	<input type="radio"/>	<input checked="" type="radio"/>
A private cloud must be disconnected from the internet.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No.

You cannot add physical servers to the public cloud. You can only deploy virtual servers in the public cloud.
You can extend a private cloud by deploying virtual servers in a public cloud. This would create a hybrid cloud.

Box 2: No.

Box 3: No.

It is not true that a private cloud must be disconnected from the Internet. Private clouds can be and most commonly are connected to the Internet. Private cloud means that the physical servers are managed by you. It does not mean that it is disconnected from the Internet.

CertyIQ**Question: 63**

You have 50 virtual machines hosted on-premises and 50 virtual machines hosted in Azure. The on-premises virtual machines and the Azure virtual machines connect to each other.

Which type of cloud model is this?

- A. hybrid
- B. private
- C. public

Answer: A**Explanation:**

Hybrid

References:

<https://azure.microsoft.com/en-gb/overview/what-is-hybrid-cloud-computing/>

CertyIQ**Question: 64**

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
------------	-----	----

A platform as a service (PaaS) solution that hosts web apps in Azure provides full control of the operating systems that host applications.

A Platform as a Service (PaaS) solution that hosts web apps in Azure can be provided with additional memory by changing the pricing tier.

A Platform as a Service (PaaS) solution that hosts web apps in Azure can be configured to automatically scale the number of instances based on demand.

Answer:

Answer Area

Statements

Yes

No

A platform as a service (PaaS) solution that hosts web apps in Azure provides full control of the operating systems that host applications.

A Platform as a Service (PaaS) solution that hosts web apps in Azure can be provided with additional memory by changing the pricing tier.

A Platform as a Service (PaaS) solution that hosts web apps in Azure can be configured to automatically scale the number of instances based on demand.

Explanation:

Box 1: No -

A PaaS solution does not provide access to the operating system. The Azure Web Apps service provides an environment for you to host your web applications.

Behind the scenes, the web apps are hosted on virtual machines running IIS. However, you have no direct access to the virtual machine, the operating system or IIS.

Box 2: Yes -

Box 3: Yes -

A PaaS solution that hosts web apps in Azure does provide the ability to scale the platform automatically. This is known as autoscaling. Behind the scenes, the web apps are hosted on virtual machines running IIS. Autoscaling means adding more load balanced virtual machines to host the web apps.

Reference:

<https://azure.microsoft.com/en-gb/overview/what-is-paas/>

Question: 65

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not

appear in the review screen.

Your company plans to migrate all its data and resources to Azure.

The company's migration plan states that only Platform as a Service (PaaS) solutions must be used in Azure.

You need to deploy an Azure environment that meets the company migration plan.

Solution: You create Azure virtual machines, Azure SQL databases, and Azure Storage accounts.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Platform as a service (PaaS) is a complete development and deployment environment in the cloud. PaaS includes infrastructure "servers, storage, and networking" but also middleware, development tools, business intelligence (BI) services, database management systems, and more. PaaS is designed to support the complete web application lifecycle: building, testing, deploying, managing, and updating.

However, virtual machines are examples of Infrastructure as a service (IaaS). IaaS is an instant computing infrastructure, provisioned and managed over the internet.

References:

<https://azure.microsoft.com/en-us/overview/what-is-paas/>

<https://azure.microsoft.com/en-us/overview/what-is-iaas/>

Question: 66

CertyIQ

Your company plans to deploy several custom applications to Azure. The applications will provide invoicing services to the customers of the company. Each application will have several prerequisite applications and services installed.

You need to recommend a cloud deployment solution for all the applications.

What should you recommend?

A. Software as a Service (SaaS)

B. Platform as a Service (PaaS)

C. Infrastructure as a Service (IaaS)

Answer: C

Explanation:

Infrastructure as a service (IaaS) is an instant computing infrastructure, provisioned and managed over the internet. The IaaS service provider manages the infrastructure, while you purchase, install, configure, and manage your own software.

Incorrect Answers:

A: Software as a service (SaaS) allows users to connect to and use cloud-based apps over the Internet.

Common examples are email, calendaring, and office tools. In this scenario, you need to run your own apps, and therefore require an infrastructure.

B:

Platform as a service (PaaS) is a complete development and deployment environment in the cloud. PaaS includes infrastructure "servers, storage, and networking" but also middleware, development tools, business intelligence (BI) services, database management systems, and more. PaaS is designed to support the complete web application lifecycle: building, testing, deploying, managing, and updating.

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
------------	-----	----

Building a data center infrastructure is an example of operational expenditure (OpEx) costs.

Monthly salaries for technical personnel are an example of operational expenditure (OpEx) costs.

Leasing software is an example of operational expenditure (OpEx) costs.

Answer:

Answer Area

Statements	Yes	No
------------	-----	----

Building a data center infrastructure is an example of operational expenditure (OpEx) costs.

Monthly salaries for technical personnel are an example of operational expenditure (OpEx) costs.

Leasing software is an example of operational expenditure (OpEx) costs.

Explanation:

Box 1: No -

Building a data center infrastructure is capital expenditure, not operation expenditure.

Box 2: Yes -

OpEx is ongoing costs (costs of operations) such as staff salaries.

Box 2: Yes -

OpEx is ongoing costs (costs of operations) such as leasing software. If you purchased software as a one-off purchase, that would be CapEx, but leasing software is ongoing so it's OpEx.

Question: 68

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Azure Cosmos DB is an example of a offering.

- platform as a service (PaaS)
- infrastructure as a service (IaaS)
- serverless
- software as a service (SaaS)

Answer:

Answer Area

Azure Cosmos DB is an example of a offering.

- platform as a service (PaaS)
- infrastructure as a service (IaaS)
- serverless
- software as a service (SaaS)

Explanation:

Azure Cosmos DB is an example of a platform as a service (PaaS) cloud database provider.

Reference:

<https://docs.microsoft.com/en-us/azure/cosmos-db/database-security>

Question: 69

CertyIQ

Hot Area:

Answer Area

A Microsoft SQL Server database that is hosted in the cloud and has software updates managed by Azure is an example of

- disaster recovery as a service (DRaaS).
- infrastructure as a service (IaaS).
- platform as a service (PaaS). (highlighted)
- software as a service (SaaS).

Answer:

Answer Area

A Microsoft SQL Server database that is hosted in the cloud and has software updates managed by Azure is an example of

- disaster recovery as a service (DRaaS).
- infrastructure as a service (IaaS).
- platform as a service (PaaS). (highlighted)
- software as a service (SaaS).

Explanation:

Managed by Azure is the key, so, is a PaaS

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/azure-sql-iaas-vs-paas-what-is-overview>

Question: 73

CertyIQ

Your company plans to migrate all its data and resources to Azure.

The company's migration plan states that only Platform as a Service (PaaS) solutions must be used in Azure.

You need to deploy an Azure environment that meets the company's migration plan.

What should you create?

- A. Azure virtual machines, Azure SQL databases, and Azure Storage accounts.
- B. an Azure App Service and Azure virtual machines that have Microsoft SQL Server installed.
- C. an Azure App Service and Azure SQL databases. (highlighted)
- D. Azure storage accounts and web server in Azure virtual machines.

Answer: C

Explanation:

Azure App Service and Azure SQL databases are examples of Azure PaaS solutions. Therefore, this solution does meet the goal.

Question: 74

What does a customer provide in a software as a service (SaaS) model?

- A. application data
- B. data storage
- C. compute resources
- D. application software

Answer: A**Explanation:**

SaaS provides a complete software solution which you purchase on a pay-as-you-go basis from a cloud service provider. You rent the use of an app for your organization and your users connect to it over the Internet, usually with a web browser. All of the underlying infrastructure, middleware, app software and app data are located in the service provider's data center. The service provider manages the hardware and software and with the appropriate service agreement, will ensure the availability and the security of the app and your data as well.

Reference:

<https://azure.microsoft.com/en-in/overview/what-is-saas/>

Question: 75

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Files is an example of infrastructure as a service (IaaS).	<input type="radio"/>	<input type="radio"/>
A DNS server that runs on an Azure virtual machine is an example of platform as a service (PaaS).	<input type="radio"/>	<input type="radio"/>
Microsoft Intune is an example of software as a service (SaaS).	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Files is an example of infrastructure as a service (IaaS).	<input type="radio"/>	<input checked="" type="radio"/>
A DNS server that runs on an Azure virtual machine is an example of platform as a service (PaaS).	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft Intune is an example of software as a service (SaaS).	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

1.) Azure Files is an example of infrastructure as a service (IaaS).

Answer: **No.** Azure Files is actually a managed file storage service, which is considered a part of Platform as a Service (PaaS).

2.) A DNS server that runs on an Azure virtual machine is an example of platform as a service (PaaS).

Answer: **No.** A DNS server running on an Azure virtual machine would be considered Infrastructure as a Service (IaaS) because it involves managing the underlying infrastructure.

3.) Microsoft Intune is an example of software as a service (SaaS).

Answer: **Yes.** Microsoft Intune is indeed a Software as a Service (SaaS) as it provides software over the internet without needing local installation.

Question: 76

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer Area

Statements	Yes	No
Cloud computing provides elastic scalability.	<input type="radio"/>	<input type="radio"/>
Customers can minimize capital expenditure (CapEx) by using a public cloud.	<input type="radio"/>	<input type="radio"/>
Cloud computing leverages virtualization to provide services to multiple customers simultaneously.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements

Yes No

Cloud computing provides elastic scalability.

Customers can minimize capital expenditure (CapEx) by using a public cloud.

Cloud computing leverages virtualization to provide services to multiple customers simultaneously.

Question: 77

CertyIQ

What is the first stage in the Microsoft Cloud Adoption Framework for Azure?

- A. Adopt the cloud.
- B. Make a plan.
- C. Ready your organization.
- D. Define your strategy.

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/overview>

Question: 78

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area**Statements****Yes****No**

A company can extend an internal network by adding its own physical servers to the public cloud.

A private cloud must be disconnected from the internet.

Part of a hybrid cloud is the public cloud.

Answer:**Answer Area****Statements****Yes****No**

A company can extend an internal network by adding its own physical servers to the public cloud.

A private cloud must be disconnected from the internet.

Part of a hybrid cloud is the public cloud.

Explanation:

Box 1: No -

You cannot add physical servers to the public cloud. You can only deploy virtual servers in the public cloud.

You can extend a private cloud by deploying virtual servers in a public cloud. This would create a hybrid cloud.

Box 2: No -

A private cloud exists in cyberspace and is accessed via the internet.

Box 3: Yes.

Reference:

<https://azure.microsoft.com/en-gb/overview/what-are-private-public-hybrid-clouds/>

Question: 79**CertyIQ****HOTSPOT -**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You must have physical servers to use cloud computing.	<input type="radio"/>	<input type="radio"/>
You must have internet connectivity to use cloud computing.	<input type="radio"/>	<input type="radio"/>
The costs to increase cloud computing capacity are less than the costs to increase the computing capacity of an on-premises datacenter.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You must have physical servers to use cloud computing.	<input type="radio"/>	<input checked="" type="radio"/>
You must have internet connectivity to use cloud computing.	<input checked="" type="radio"/>	<input type="radio"/>
The costs to increase cloud computing capacity are less than the costs to increase the computing capacity of an on-premises datacenter.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

Virtual Machines works.

Box 2: Yes -

Simply put, cloud computing is the delivery of computing services "including servers, storage, databases, networking, software, analytics, and intelligence" over the Internet (the cloud) to offer faster innovation, flexible resources, and economies of scale.

Box 3: Yes -

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-cloud-computing/>

Question: 80

CertyIQ

DRAG DROP -

Match the cloud computing benefits to the correct descriptions.

To answer, drag the appropriate benefit from the column on the left to its description on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Area

Benefits

Agility

Resources can be provisioned dynamically to meet changing demands.

Geo-distribution

Applications and data can be deployed to multiple regions.

Scalability

Applications can be developed, tested, and launched rapidly.

Answer:

Answer Area

Benefits

Agility

Scalability

Resources can be provisioned dynamically to meet changing demands.

Geo-distribution

Geo-distribution

Answer:

Answer Area

Azure Site Recovery provides

fault tolerance
disaster recovery
elasticity
high availability

for virtual machines

Explanation:

You set up disaster recovery for Azure VMs using Azure Site Recovery.

Reference:

<https://docs.microsoft.com/en-us/azure/site-recovery/azure-to-azure-tutorial-enable-replication>

Question: 82

CertyIQ

HOTSPOT -

You plan to use Azure to host two apps named App1 and App2. The apps must meet the following requirements:

- ⇒ You must be able to modify the code of App1.
- ⇒ Administrative effort to manage the operating system of App1 must be minimized.
- ⇒ App2 must run interactively with the operating system of the server.

Which type of cloud service should you use for each app? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

App1:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

App2:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Answer:

Answer Area

App1:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

App2:

Infrastructure as a service (IaaS)
Platform as a service (PaaS)
Software as a service (SaaS)

Explanation:

Box 1: Azure Platform as a service (PaaS)

Organizations typically use PaaS for these scenarios:

Development framework. PaaS provides a framework that developers can build upon to develop or customize cloud-based applications. Similar to the way you create an Excel macro, PaaS lets developers create applications using built-in software components. Cloud features such as scalability, high-availability, and multi-tenant capability are included, reducing the amount of coding that developers must do.

Box 2:

Software as a service (SaaS) allows users to connect to and use cloud-based apps over the Internet. Common examples are email, calendaring, and office tools (such as Microsoft Office 365).

SaaS provides a complete software solution that you purchase on a pay-as-you-go basis from a cloud service provider. You rent the use of an app for your organization, and your users connect to it over the Internet, usually with a web browser. All of the underlying infrastructure, middleware, app software, and app data are located in the service provider's data center. The service provider manages the hardware and software, and with the appropriate service agreement, will ensure the availability and the security of the app and your data as well. SaaS allows your organization to get quickly up and running with an app at minimal upfront cost.

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-paas/>

Question: 83

You have an accounting application named App1 that uses a legacy database.

You plan to move App1 to the cloud.

Which service model should you use?

- A. platform as a service (PaaS)
- B. infrastructure as a service (IaaS)
- C. software as a service (SaaS)

Answer: B

Explanation:

IaaS as you need to install the legacy software.

Cloud Infrastructure-based Applications " It moves your existing on-premises apps to the Infrastructure as a Service (IaaS) platform or re-hosts them. Lift & Shift is a common term for this type of relocation. The programs will be nearly identical to what they were before, but they will now be able to run on cloud VMs.

Reference:

<https://techtaalk.com/microsoft-azure-for-legacy-application-modernization/>

Question: 84

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

When you are implementing a Software as a Service (SaaS) solution,
you are responsible for

configuring high availability
defining scalability rules
installing the SaaS solution
configuring the SaaS solution

Answer:

Answer Area

When you are implementing a Software as a Service (SaaS) solution,
you are responsible for

configuring high availability
defining scalability rules
installing the SaaS solution
configuring the SaaS solution

Explanation:

Box: configuring the SaaS Solution

Software as a service (or SaaS) is a way of delivering applications over the Internet "as a service. Instead of installing and maintaining software, you simply access it via the Internet, freeing yourself from complex software and hardware management.

SaaS applications are sometimes called Web-based software, on-demand software, or hosted software. Whatever the name, SaaS applications run on a SaaS provider's servers. The provider manages access to the application, including security, availability, and performance.

Reference:

<https://www.salesforce.com/in/saas/>

CertyIQ

Question: 85

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

An Azure web app that queries an on-premises Microsoft SQL server is an example of a

	▼
hybrid	
multi-vendor	
private	
public	

cloud.

Answer:

Answer Area

An Azure web app that queries an on-premises Microsoft SQL server is an example of a

	▼
hybrid	
multi-vendor	
private	
public	

cloud.

Explanation:

Box: hybrid -

You can deploy hybrid app with on-premises data that scales cross-cloud.

Reference:

<https://docs.microsoft.com/en-us/azure/architecture/hybrid/deployments/solution-deployment-guide-cross-cloud-scaling-onprem-data>

CertyIQ

Question: 86

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

A Microsoft SQL Server database that is hosted in the cloud and has software updates managed by Azure is an example of

disaster recovery as a service (DRaaS).
infrastructure as a service (IaaS).
platform as a service (PaaS).
software as a service (SaaS).

Answer:

Answer Area

A Microsoft SQL Server database that is hosted in the cloud and has software updates managed by Azure is an example of

disaster recovery as a service (DRaaS).
infrastructure as a service (IaaS).
platform as a service (PaaS).
software as a service (SaaS).

Explanation:

Box: Platform as a service (PaaS)

Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications. You purchase the resources you need from a cloud service provider on a pay-as-you-go basis and access them over a secure Internet connection.

Like IaaS, PaaS includes infrastructure "servers, storage, and networking" but also middleware, development tools, business intelligence (BI) services, database management systems, and more.

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-paas/>

Question: 87

CertyIQ

Which cloud computing model includes on-premises and cloud-based resources?

- A. hybrid
- B. public
- C. private

Answer: A

Explanation:

A hybrid cloud " sometimes called a cloud hybrid " is a computing environment that combines an on-premises datacenter (also called a private cloud) with a public cloud, allowing data and applications to be shared between them. Some people define hybrid cloud to include multicloud configurations where an organization uses more than one public cloud in addition to their on-premises datacenter.

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-hybrid-cloud-computing/>

Question: 88

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Autoscaling is an example of

Answer:

Answer Area

Autoscaling is an example of

**Explanation:**

An Azure virtual machine scale set can automatically increase or decrease the number of VM instances that run your application. This automated and elastic behavior reduces the management overhead to monitor and optimize the performance of your application.

Also: Azure elasticity as a service is referred to a cloud service that enables in automatically scaling Azure hosted resources in par with the demand and configured parameters. It provides Azure Administrators with the ability to auto scale Azure infrastructure and resources as and when needed.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/virtual-machine-scale-sets-autoscale-overview> <https://www.netreo.com/cloud-automation/what-is-azure-elasticity-as-a-service/>

Question: 89

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
Azure virtual networks deployed to the same Azure region are connected by default.	<input type="radio"/>	<input type="radio"/>
Each Azure virtual network in a single resource group must have a unique name.	<input type="radio"/>	<input type="radio"/>
The Azure virtual network's address space must be unique within a subscription.	<input type="radio"/>	<input type="radio"/>

Answer:

Statements	Yes	No
Azure virtual networks deployed to the same Azure region are connected by default.	<input type="radio"/>	<input checked="" type="radio"/>
Each Azure virtual network in a single resource group must have a unique name.	<input checked="" type="radio"/>	<input type="radio"/>
The Azure virtual network's address space must be unique within a subscription.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

You would need to setup the VNET connections, for example with peering.

Note: You can connect virtual networks to each other with virtual network peering. These virtual networks can be in the same region or different regions (also known as Global VNet peering). Once virtual networks are peered, resources in both virtual networks can communicate with each other.

Box 2: Yes -

All Azure resource types have a scope that defines the level that resource names must be unique. A resource must have a unique name within its scope.

For example, a virtual network has a resource group scope, which means that there can be only one network named vnet-prod-westus-001 in a given resource group.

Box 3: Yes -

As you build your network in Azure, it is important to keep in mind the following universal design principles: Ensure non-overlapping address spaces. Make sure your VNet address space (CIDR block) does not overlap with your organization's other network ranges.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/tutorial-connect-virtual-networks-portal> <https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/ready/azure-best-practices/resource-naming>

Question: 90

CertyIQ

Which term represents the ability to increase the computing capacity of a virtual machine by adding memory or CPUs?

- A. agility
- B. vertical scaling
- C. horizontal scaling
- D. elasticity

Answer: B

Explanation:

Vertical scaling, also known as scale up and scale down, means increasing or decreasing virtual machine (VM) sizes in response to a workload. Compare this behavior with horizontal scaling, also referred to as scale out and scale in, where the number of VMs is altered depending on the workload.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/virtual-machine-scale-sets-vertical-scale-reprovision>

CertyIQ

Question: 91

What are two benefits of cloud computing? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. enables the rapid provisioning of resources
- B. has increased administrative complexity
- C. has the same configuration options as on-premises
- D. shifts capital expenditures (CAPEX) to operating expenditures (OPEX)

Answer: AD

Explanation:

Azure allows you to build, deploy, and manage apps more quickly and easily without having to buy and/or maintain the underlying infrastructure.

Azure provides flexibility between CapEx and OpEx

Capital expenditures generate benefits over a long period. These expenditures are generally nonrecurring and result in the acquisition of permanent assets.

Building an application could qualify as a capital expenditure. Example, Azure Reserved Instances (Azure RI) help Azure's most active customers save on long-term VM usage reserving VMs in advance at a discounted price by committing to a one or three-year benefits.

Operating expenditures are ongoing costs of doing business. Consuming cloud services in a pay-as-you-go model could qualify as an operating expenditure.

Example, you pay for a service or product as you use it i.e. pay-as-you-go pricing.

Reference:

<https://www.protechtraining.com/blog/post/top-5-benefits-of-microsoft-azure-for-business-934> <https://www.azureguru.org/capex-vs-opex/#>

CertyIQ

Question: 92

What is a feature of an Azure virtual network?

- A. resource cost analysis
- B. packet inspection
- C. geo-redundancy
- D. isolation and segmentation

Answer: D

Explanation:

isolated networking components. Segmented into one or more subnets.

Implement network segmentation patterns on Azure.

A unified enterprise segmentation strategy guides technical teams to consistently segment access using networking, applications, identity, and any other access controls. Create segmentation in your network footprint by defining perimeters.

The main reasons for segmentation are:

The ability to group related assets that are a part of (or support) workload operations.

Isolation of resources.

Governance policies set by the organization.

Reference:

<https://docs.microsoft.com/en-us/azure/architecture/framework/security/design-network-segmentation>

Question: 93

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Elasticity
Geo-distribution
High availability
Scalability

enables Azure resources to be deployed close to users.

Answer:

Answer Area

Elasticity
Geo-distribution
High availability
Scalability

enables Azure resources to be deployed close to users.

Explanation:

Because of geo-distribution you can deploy apps and data to regional datacenters around the globe, thereby ensuring that your customers always have the best performance in their region.

Reference:

<https://docs.microsoft.com/learn/modules/fundamental-azure-concepts/benefits-of-cloud-computing>

Question: 94

CertyIQ

DRAG DROP -

Match the cloud computing benefits to the appropriate descriptions.

To answer, drag the appropriate benefit from the column on the left to its description on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Benefits
Disaster recovery
Geo-distribution
High availability
Scalability

Answer Area

Benefit

Increase the compute capacity of apps in the cloud.

Benefit

Provide a continuous user experience with no apparent downtime.

Benefit

Ensure that users always have the best experience by deploying apps to all the regions where there are users.

Answer:

Benefits	Answer Area
Disaster recovery	Scalability Increase the compute capacity of apps in the cloud.
Geo-distribution	High availability Provide a continuous user experience with no apparent downtime.
High availability	Scalability Ensure that users always have the best experience by deploying apps to all the regions where there are users.
Scalability	

Explanation:

Scalability - Increase the compute capacity of apps in the cloud

High Availability: - Provide a continuous user experience with no apparent downtime

Geo-Distribution - Ensures that users always have the best experience by deploying apps to all the regions where there are users

Reference:

<https://docs.microsoft.com/learn/modules/fundamental-azure-concepts/benefits-of-cloud-computing>

CertyIQ

Question: 95

Which cloud computing benefit provides continuous user access to a cloud-based application with minimal downtime?

- A. agility
- B. scalability
- C. elasticity
- D. high availability

Answer: D

Explanation:

high availability is the only answer that has to do with keeping the applications available to the users.

CertyIQ

Question: 96

You need to identify the type of failure for which an Azure Availability Zone can be used to protect access to Azure services.

What should you identify?

- A. a physical server failure
- B. an Azure region failure
- C. a storage failure
- D. an Azure data center failure

Answer: D**Explanation:**

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. An Availability Zone is a physically separate zone, within an Azure region. There are three Availability Zones per supported Azure region.

Each Availability Zone has a distinct power source, network, and cooling. By architecting your solutions to use replicated VMs in zones, you can protect your apps and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/availability>

CertyIQ**Question: 97****HOTSPOT -**

You plan to extend your company's network to Azure.

The network contains a VPN appliance that uses an IP address of 131.107.200.1.

You need to create an Azure resource that defines the VPN appliance in Azure.

Which Azure resource should you create? To answer, select the appropriate resource in the answer area.

Hot Area:

Answer Area**Services**

	NAT gateways	
	Application gateways	
	Local network gateways	
	Virtual network gateways	
	On-premises Data Gateways	
	Azure Data Box Gateway	
	Azure Stack Edge / Data Box Gateway	
	Web Application Firewall policies	

Answer:

Answer Area

Services

	NAT gateways	
	Application gateways	
	Local network gateways	
	Virtual network gateways	
	On-premises Data Gateways	
	Azure Data Box Gateway	
	Azure Stack Edge / Data Box Gateway	
	Web Application Firewall policies	

Explanation:

A Local Network Gateway is an object in Azure that represents your on-premise VPN device. A Virtual Network Gateway is the VPN object at the Azure end of the VPN. A 'connection' is what connects the Local Network Gateway and the Virtual Network Gateway to bring up the VPN.

The local network gateway typically refers to your on-premises location. You give the site a name by which Azure can refer to it, then specify the IP address of the on-premises VPN device to which you will create a connection. You also specify the IP address prefixes that will be routed through the VPN gateway to the VPN device. The address prefixes you specify are the prefixes located on your on-premises network. If your on-premises network changes or you need to change the public IP address for the VPN device, you can easily update the values later.

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-howto-site-to-site-resource-manager-portal>

CertyIQ

Question: 98

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to two or more resource groups.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

This question is repeated 3 times with different solutions. Don't get confused here; I am providing clear-cut explanations:

Solution-1: You deploy VM to two or more resource groups (NO)

Solution-2: You deploy VM to two or more availability zones (YES)

Solution-3: You deploy VM to two or more regions (N)

A resource group is a logical container for Azure resources. When you create a resource group, you specify which location to create the resource group in.

However, when you create a virtual machine and place it in the resource group, the virtual machine can still be in a different location (different datacenter).

Therefore, creating multiple resource groups, even if they are in separate datacenters, does not ensure that the services running on the virtual machines are available if a single data center fails.

References:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/overview#resource-groups>

Question: 99

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to a scale set.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

This answer does not specify that the scale set will be configured across multiple data centers so this solution does not meet the goal.

Azure virtual machine scale sets let you create and manage a group of load balanced VMs. The number of VM instances can automatically increase or decrease in response to demand or a defined schedule. Scale sets provide high availability to your applications, and allow you to centrally manage, configure, and update many VMs.

Virtual machines in a scale set can be deployed across multiple update domains and fault domains to maximize availability and resilience to outages due to data center outages, and planned or unplanned maintenance events.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability>

Question: 100

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
An Azure subscription can be associated to multiple Azure Active Directory (Azure AD) tenants.	<input type="radio"/>	<input type="radio"/>
You can change the Azure Active Directory (Azure AD) tenant to which an Azure subscription is associated.	<input type="radio"/>	<input type="radio"/>
When an Azure subscription expires, the associated Azure Active Directory (Azure AD) tenant is deleted automatically.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
An Azure subscription can be associated to multiple Azure Active Directory (Azure AD) tenants.	<input type="radio"/>	<input checked="" type="radio"/>
You can change the Azure Active Directory (Azure AD) tenant to which an Azure subscription is associated.	<input checked="" type="radio"/>	<input type="radio"/>
When an Azure subscription expires, the associated Azure Active Directory (Azure AD) tenant is deleted automatically.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

An Azure AD tenant can have multiple subscriptions but an Azure subscription can only be associated with one Azure AD tenant.

Box 2: Yes -

Box 3: No -

If your subscription expires, you lose access to all the other resources associated with the subscription. However, the Azure AD directory remains in Azure. You can associate and manage the directory using a different Azure subscription.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-how-subscriptions-associated-directory>

Question: 101

CertyIQ

This question requires that you evaluate the underlined text to determine if it is correct.

Resource groups provide organizations with the ability to manage the compliance of Azure resources across multiple subscriptions.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Management groups
- C. Azure policies
- D. Azure App Service plans

Answer: B**Explanation:**

"Azure management groups are containers for managing compliances across multiple subscriptions."

Question: 102

CertyIQ

Your company plans to migrate to Azure.

The company has several departments. All the Azure resources used by each department will be managed by a department administrator.

What are two possible techniques to segment Azure for the departments? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. multiple subscriptions
- B. multiple Azure Active Directory (Azure AD) directories
- C. multiple regions
- D. multiple resource groups

Answer: AD**Explanation:**

An Azure subscription is a container for Azure resources. It is also a boundary for permissions to resources and for billing. You are charged monthly for all resources in a subscription. A single Azure tenant (Azure Active Directory) can contain multiple Azure subscriptions.

A resource group is a container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group.

To enable each department administrator to manage the Azure resources used by that department, you will need to create a separate subscription per department. You can then assign each department administrator as an administrator for the subscription to enable them to manage all resources in that subscription.

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/create-subscription> <https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/add-change-subscription-administrator>

Question: 103

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A single Microsoft account can be used to manage multiple Azure subscriptions.	<input type="radio"/>	<input type="radio"/>
Two Azure subscriptions can be merged into a single subscription.	<input type="radio"/>	<input type="radio"/>
A company can use resources from multiple subscriptions.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A single Microsoft account can be used to manage multiple Azure subscriptions.	<input checked="" type="radio"/>	<input type="radio"/>
Two Azure subscriptions can be merged into a single subscription.	<input type="radio"/>	<input checked="" type="radio"/>
A company can use resources from multiple subscriptions.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

You can use the same account to manage multiple subscriptions. You can create an additional subscription for your account in the Azure portal. You may want an additional subscription to avoid hitting subscription limits, to create separate environments for security, or to isolate data for compliance reasons.

Box 2: No -

You cannot merge two subscriptions into a single subscription. However, you can move some Azure resources from one subscription to another. You can also transfer ownership of a subscription and change the billing type for a subscription.

Box 3: Yes -

A company can have multiple subscriptions and store resources in the different subscriptions. However, a resource instance can exist in only one subscription.

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/create-subscription>

Question: 104**CertyIQ**

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You have several virtual machines in an Azure subscription.
You create a new subscription.

- The virtual machines cannot be moved to the new subscription.
- The virtual machines can be moved to the new subscription.**
- The virtual machines can be moved to the new subscription only if they are all in the same resource group.
- The virtual machines can be moved to the new subscription only if they run Windows Server 2016.

Answer:

Answer Area

You have several virtual machines in an Azure subscription.
You create a new subscription.

- The virtual machines cannot be moved to the new subscription.
- The virtual machines can be moved to the new subscription.**
- The virtual machines can be moved to the new subscription only if they are all in the same resource group.
- The virtual machines can be moved to the new subscription only if they run Windows Server 2016.

Explanation:

You can move a VM and its associated resources to a different subscription by using the Azure portal.

Moving between subscriptions can be handy if you originally created a VM in a personal subscription and now want to move it to your company's subscription to continue your work. You do not need to start the VM in order to move it and it should continue to run during the move.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/move-vm>

CertyIQ**Question: 105**

You have an Azure environment that contains multiple Azure virtual machines.

You plan to implement a solution that enables the client computers on your on-premises network to communicate to the Azure virtual machines.

You need to recommend which Azure resources must be created for the planned solution.

Which two Azure resources should you include in the recommendation? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a virtual network gateway
- B. a load balancer
- C. an application gateway
- D. a virtual network
- E. a gateway subnet

Answer: AE**Explanation:**

If you already have Azure VMs, this implies you have a VNet already. Thus the answer should be Gateway Subnet and VNet Gateway

To implement a solution that enables the client computers on your on-premises network to communicate to the Azure virtual machines, you need to configure a

VPN (Virtual Private Network) to connect the on-premises network to the Azure virtual network.

The Azure VPN device is known as a Virtual Network Gateway. The virtual network gateway needs to be located in a dedicated subnet in the Azure virtual network. This dedicated subnet is known as a gateway subnet and must be named 'GatewaySubnet'.

Note: a virtual network (answer D) is also required. However, as we already have virtual machines deployed in a Azure, we can assume that the virtual network is already in place.

References:

<https://docs.microsoft.com/en-us/office365/enterprise/connect-an-on-premises-network-to-a-microsoft-azure-virtual-network>

CertyIQ**Question: 106**

You attempt to create several managed Microsoft SQL Server instances in an Azure environment and receive a message that you must increase your Azure subscription limits.

What should you do to increase the limits?

- A. Create a service health alert
- B. Upgrade your support plan
- C. Modify an Azure policy
- D. Create a new support request

Answer: D

Explanation:

Many Azure resources have quota limits. The purpose of the quota limits is to help you control your Azure costs. However, it is common to require an increase to the default quota.

You can request a quota limit increase by opening a support request. In the support request, select 'Service and subscription limits (quotas)' for the Issue type, select your subscription and the service you want to increase the quota for. For this question, you would select 'SQL Database Managed Instance' as the quota type.

Reference:

<https://docs.microsoft.com/en-us/azure/sql-database/sql-database-managed-instance-resource-limits#obtaining-a-larger-quota-for-sql-managed-instance>

Question: 107

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes **No**

Each Azure subscription can contain multiple account administrators.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

Each Azure subscription can be managed by using a Microsoft account only.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

An Azure resource group contains multiple Azure subscriptions.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

Answer:

Answer Area

Statements

Yes **No**

Each Azure subscription can contain multiple account administrators.

<input checked="" type="radio"/>	<input type="radio"/>
----------------------------------	-----------------------

Each Azure subscription can be managed by using a Microsoft account only.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

An Azure resource group contains multiple Azure subscriptions.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

Explanation:

Box 1: No -

You can assign service administrators and co-administrators in the Azure Portal but there can only be one

account administrator.

Box 2: No -

You need an Azure Active Directory account to manage a subscription, not a Microsoft account.

An account is created in the Azure Active Directory when you create the subscription. Further accounts can be created in the Azure Active Directory to manage the subscription.

Box 3: No -

Resource groups are logical containers for Azure resources. However, resource groups do not contain subscriptions. Subscriptions contain resource groups.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/subscriptions-licenses-accounts-and-tenants-for-microsoft-cloud-offerings>

Question: 108

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
------------	-----	----

Availability zones can be implemented in all Azure regions.

Only virtual machines that run Windows Server can be created in availability zones.

Availability zones are used to replicate data and applications to multiple regions.

Answer:

Answer Area

Statements	Yes	No
------------	-----	----

Availability zones can be implemented in all Azure regions.

Only virtual machines that run Windows Server can be created in availability zones.

Availability zones are used to replicate data and applications to multiple regions.

Explanation:

Box 1: No -

Not all Azure regions support availability zones.

Box 2: No -

Availability zones can be used with many Azure services, not just VMs.

Box 3: No -

Availability Zones are unique physical locations within a single Azure region.

Reference:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-region#azure-regions-with-availability-zones>

CertyIQ

Question: 109

HOTSPOT -

You plan to create an Azure virtual machine.

You need to identify which storage service must be used to store the unmanaged data disks of the virtual machine.

What should you identify? To answer, select the appropriate service in the answer area.

Hot Area:

Answer Area

Containers

Scalable, cost-effective storage for unstructured data

Effectively scale apps according to traffic

[Learn more](#)

Answer:

Answer Area

Containers

Scalable, cost-effective storage for unstructured data

[Learn more](#)

File shares

Serverless SMB file shares

[Learn more](#)

Tables

Tabular data storage

[Learn more](#)

Queues

Effectively scale apps according to traffic

[Learn more](#)

Explanation:

Azure containers are the backbone of the virtual disks platform for Azure IaaS. Both Azure OS and data disks are implemented as virtual disks where data is durably persisted in the Azure Storage platform and then delivered to the virtual machines for maximum performance. Azure Disks are persisted in Hyper-V VHD format and stored as a page blob in Azure Storage.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-pageblob-overview>

Question: 110**CertyIQ**

Your company plans to move several servers to Azure.

The company's compliance policy states that a server named FinServer must be on a separate network segment.

You are evaluating which Azure services can be used to meet the compliance policy requirements.

Which Azure solution should you recommend?

- A. a resource group for FinServer and another resource group for all the other servers
- B. a virtual network for FinServer and another virtual network for all the other servers
- C. a VPN for FinServer and a virtual network gateway for each other server
- D. one resource group for all the servers and a resource lock for FinServer

Answer: B**Explanation:**

Networks in Azure are known as virtual networks. A virtual network can have multiple IP address spaces and multiple subnets. Azure automatically routes traffic between different subnets within a virtual network.

The question states that FinServer must be on a separate network segment. The only way to separate FinServer from the other servers in networking terms is to place the server in a different virtual network to the other servers.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-vnet-plan-design-arm>

Question: 111**CertyIQ**

You plan to map a network drive from several computers that run Windows 10 to Azure Storage.

You need to create a storage solution in Azure for the planned mapped drive.

What should you create?

- A. an Azure SQL database
- B. a virtual machine data disk
- C. a File service in a storage account
- D. a Blob service in a storage account

Answer: C**Explanation:**

Azure Files is Microsoft's easy-to-use cloud file system. Azure file shares can be seamlessly used in Windows and Windows Server.

To use an Azure file share with Windows, you must either mount it, which means assigning it a drive letter or mount point path, or access it via its UNC path.

Unlike other SMB shares you may have interacted with, such as those hosted on a Windows Server, Linux

Samba server, or NAS device, Azure file shares do not currently support Kerberos authentication with your Active Directory (AD) or Azure Active Directory (AAD) identity, although this is a feature we are working on. Instead, you must access your Azure file share with the storage account key for the storage account containing your Azure file share. A storage account key is an administrator key for a storage account, including administrator permissions to all files and folders within the file share you're accessing, and for all file shares and other storage resources (blobs, queues, tables, etc) contained within your storage account.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/files/storage-how-to-use-files-windows>

Question: 112

CertyIQ

HOTSPOT -

You plan to implement an Azure database solution.

You need to implement a database solution that meets the following requirements:

- ⇒ Can add data concurrently from multiple regions
- ⇒ Can store JSON documents

Which database service should you deploy? To answer, select the appropriate service in the answer area.

Hot Area:

DATABASES (16)

 Azure Cosmos DB	★	 SQL databases	★
 Azure Database for MySQL servers	★	 Azure Database for PostgreSQL servers	★
 Azure Database for MariaDB servers	★	 SQL servers	★
 SQL Data warehouses	★	 Azure Database Migration Services	★
 Azure Cache for Redis	★	 SQL Server stretch databases	★
 Data factories	★	 SQL elastic pools	★
 Virtual Clusters	★	 Managed databases	★
 Elastic Job agents	PREVIEW ★	 SQL managed instances	★

Answer:

DATABASES (16)

 Azure Cosmos DB	★	 SQL databases	★
 Azure Database for MySQL servers	★	 Azure Database for PostgreSQL servers	★
 Azure Database for MariaDB servers	★	 SQL servers	★
 SQL Data warehouses	★	 Azure Database Migration Services	★
 Azure Cache for Redis	★	 SQL Server stretch databases	★
 Data factories	★	 SQL elastic pools	★
 Virtual Clusters	★	 Managed databases	★
 Elastic Job agents	PREVIEW ★	 SQL managed instances	★

Explanation:

Azure Cosmos DB is Microsoft's globally distributed, multi-model database service. With a click of a button, Cosmos DB enables you to elastically and independently scale throughput and storage across any number of

Azure regions worldwide.

Azure Cosmos DB is a great way to store unstructured and JSON data. Combined with Azure Functions, Cosmos DB makes storing data quick and easy with much less code than required for storing data in a relational database.

Reference:

<https://docs.microsoft.com/en-us/azure/cosmos-db/introduction> <https://docs.microsoft.com/en-us/azure/azure-functions/functions-integrate-store-unstructured-data-cosmosdb?tabs=csharp>

Question: 113

CertyIQ

Your company plans to start using Azure and will migrate all its network resources to Azure.

You need to start the planning process by exploring Azure.

What should you create first?

- A. a subscription
- B. a resource group
- C. a virtual network
- D. a management group

Answer: A

Explanation:

The first thing you create in Azure is a subscription. You can think of an Azure subscription as an 'Azure account'. You get billed per subscription.

A subscription is an agreement with Microsoft to use one or more Microsoft cloud platforms or services, for which charges accrue based on either a per-user license fee or on cloud-based resource consumption.

- ⇒ Microsoft's Software as a Service (SaaS)-based cloud offerings (Office 365, Intune/EMS, and Dynamics 365) charge per-user license fees.
- ⇒ Microsoft's Platform as a Service (PaaS) and Infrastructure as a Service (IaaS) cloud offerings (Azure) charge based on cloud resource consumption.

You can also use a trial subscription, but the subscription expires after a specific amount of time or consumption charges. You can convert a trial subscription to a paid subscription.

Organizations can have multiple subscriptions for Microsoft's cloud offerings.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/subscriptions-licenses-accounts-and-tenants-for-microsoft-cloud-offerings>

Question: 114

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
All the Azure resources deployed to a resource group must use the same Azure region.	<input type="radio"/>	<input checked="" type="radio"/>
If you assign a tag to a resource group, all the Azure resources in that resource group are assigned to the same tag.	<input checked="" type="radio"/>	<input type="radio"/>
If you assign permissions for a user to manage a resource group, the user can manage all the Azure resources in that resource group.	<input type="radio"/>	<input checked="" type="radio"/>

Answer:

Answer Area

Statements	Yes	No
All the Azure resources deployed to a resource group must use the same Azure region.	<input type="radio"/>	<input checked="" type="radio"/>
If you assign a tag to a resource group, all the Azure resources in that resource group are assigned to the same tag.	<input type="radio"/>	<input checked="" type="radio"/>
If you assign permissions for a user to manage a resource group, the user can manage all the Azure resources in that resource group.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

Azure resources deployed to a single resource group can be located in different regions. The resource group only contains metadata about the resources it contains.

When creating a resource group, you need to provide a location for that resource group. You may be wondering, "Why does a resource group need a location?

And, if the resources can have different locations than the resource group, why does the resource group location matter at all?" The resource group stores metadata about the resources. When you specify a location for the resource group, you're specifying where that metadata is stored. For compliance reasons, you may need to ensure that your data is stored in a particular region.

Box 2: No -

Tags for Resources are not inherited by default from their Resource Group

Box 3: Yes -

A resource group can be used to scope access control for administrative actions. By default, permissions set at the resource level are inherited by the resources in the resource group.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-overview>

Question: 115

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

CertyIQ

Answer Area

Data that is stored in the Archive access tier of an Azure Storage account

- can be accessed at any time by using azcopy.exe.
- can only be read by using Azure Backup.
- must be restored before the data can be accessed.
- must be rehydrated before the data can be accessed.

Answer:

Answer Area

Data that is stored in the Archive access tier of an Azure Storage account

- can be accessed at any time by using azcopy.exe.
- can only be read by using Azure Backup.
- must be restored before the data can be accessed.
- must be rehydrated before the data can be accessed.

Explanation:

Azure storage offers different access tiers: hot, cool and archive.

The archive access tier has the lowest storage cost. But it has higher data retrieval costs compared to the hot and cool tiers. Data in the archive tier can take several hours to retrieve.

While a blob is in archive storage, the blob data is offline and can't be read, overwritten, or modified. To read or download a blob in archive, you must first rehydrate it to an online tier.

Example usage scenarios for the archive access tier include:

- ⇒ Long-term backup, secondary backup, and archival datasets
- ⇒ Original (raw) data that must be preserved, even after it has been processed into final usable form.
- ⇒ Compliance and archival data that needs to be stored for a long time and is hardly ever accessed.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-storage-tiers?tabs=azure-portal#archive-access-tier>

Question: 116

CertyIQ

HOTSPOT -

You plan to deploy a critical line-of-business application to Azure.

The application will run on an Azure virtual machine.

You need to recommend a deployment solution for the application. The solution must provide a guaranteed availability of 99.99 percent.

What is the minimum number of virtual machines and the minimum number of availability zones you should recommend for the deployment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Minimum number of virtual machines:

1	✓
2	
3	

Minimum number of availability zones:

1	✓
2	
3	

Answer:

Answer Area

Minimum number of virtual machines:

1	✓
2	
3	

Minimum number of availability zones:

1	✓
2	
3	

Explanation:

You need a minimum of two virtual machines with each one located in a different availability zone. Availability Zones is a high-availability offering that protects your applications and data from datacenter failures. Availability Zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. To ensure resiliency, there's a minimum of three separate zones in all enabled regions. The physical separation of Availability Zones within a region protects applications and data from datacenter failures. Zone-redundant services replicate your applications and data across Availability Zones to protect from single-points-of-failure. With Availability Zones, Azure offers industry best 99.99% VM uptime SLA.

Reference:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

Question: 117

CertyIQ

Which Azure service should you use to collect events from multiple resources into a centralized repository?

- A. Azure Event Hubs
- B. Azure Analysis Services
- C. Azure Monitor
- D. Azure Stream Analytics

Answer: A

Explanation:

keyword is "event" and not just any telemetry data.

"Azure Event Hubs — A big data streaming platform and event ingestion service"

<https://docs.microsoft.com/en-us/azure/event-hubs/event-hubs-about>

CertyIQ

Question: 118

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An Availability Zone in Azure has physically separate locations

- across two continents.
- within a single Azure region.
- within multiple Azure regions.
- within a single Azure datacenter.

Answer:

Answer Area

An Availability Zone in Azure has physically separate locations

- across two continents.
- within a single Azure region.
- within multiple Azure regions.
- within a single Azure datacenter.

Explanation:

Availability Zones is a high-availability offering that protects your applications and data from datacenter failures. Availability Zones are unique physical locations within an Azure region.

CertyIQ

Question: 119

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Data that is stored in an Azure Storage account automatically has at least three copies.	<input type="radio"/>	<input type="radio"/>
All data that is copied to an Azure Storage account is backed up automatically to another Azure data center.	<input type="radio"/>	<input type="radio"/>
An Azure Storage account can contain up to 2 TB of data and up to one million files.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Data that is stored in an Azure Storage account automatically has at least three copies.	<input checked="" type="radio"/>	<input type="radio"/>
All data that is copied to an Azure Storage account is backed up automatically to another Azure data center.	<input type="radio"/>	<input checked="" type="radio"/>
An Azure Storage account can contain up to 2 TB of data and up to one million files.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes -

There are different replication options available with a storage account. The 'minimum' replication option is Locally Redundant Storage (LRS). With LRS, data is replicated synchronously three times within the primary region.

Box 2: No -

Data is not backed up automatically to another Azure Data Center although it can be depending on the replication option configured for the account. Locally

Redundant Storage (LRS) is the default which maintains three copies of the data in the data center.

Geo-redundant storage (GRS) has cross-regional replication to protect against regional outages. Data is replicated synchronously three times in the primary region, then replicated asynchronously to the secondary region.

Box 3: No -

The limits are much higher than that. The current storage limit is 2 PB for US and Europe, and 500 TB for all other regions (including the UK) with no limit on the number of files.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview>

Question: 120

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
If you have Azure resources deployed to every region, you can implement availability zones in all the regions.	<input type="radio"/>	<input type="radio"/>
Only virtual machines that run Windows Server can be created in availability zones.	<input type="radio"/>	<input type="radio"/>
Availability zones are used to replicate data and applications to multiple regions.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
If you have Azure resources deployed to every region, you can implement availability zones in all the regions.	<input type="radio"/>	<input checked="" type="radio"/>
Only virtual machines that run Windows Server can be created in availability zones.	<input type="radio"/>	<input checked="" type="radio"/>
Availability zones are used to replicate data and applications to multiple regions.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

Not all Azure regions support availability zones.

Box 2: No -

Regions that support availability zones support Linux virtual machines.

Box 3: No

Availability zones are used to replicate data and applications in the same region.

Question: 121

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
North America is represented by a single Azure region.	<input type="radio"/>	<input type="radio"/>
Every Azure region has multiple datacenters.	<input type="radio"/>	<input type="radio"/>
Data transfers between Azure services located in different Azure regions are always free.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
North America is represented by a single Azure region.	<input type="radio"/>	<input checked="" type="radio"/>
Every Azure region has multiple datacenters.	<input type="radio"/>	<input checked="" type="radio"/>
Data transfers between Azure services located in different Azure regions are always free.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

North America has several Azure regions, including West US, Central US, South Central US, East US, and Canada East.

Box 2: No

A region is a geographical area on the planet that contains at least one, but potentially multiple datacenters that are nearby and networked together with a low-latency network. Azure intelligently assigns and controls the resources within each region to ensure workloads are appropriately balanced.

Box 3: No -

Outbound data transfer is charged at the normal rate and inbound data transfer is free.

Reference:

<https://www.pragimtech.com/blog/azure/azure-regions-and-paired-regions/>

Question: 122

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct

solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to two or more scale sets.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

An availability set is a logical grouping of VMs within a datacenter. You will have to use availability zones.

Hence B answer.

This answer does not specify that the scale set will be configured across multiple data centers so this solution does not meet the goal.

Azure virtual machine scale sets let you create and manage a group of load balanced VMs. The number of VM instances can automatically increase or decrease in response to demand or a defined schedule. Scale sets provide high availability to your applications, and allow you to centrally manage, configure, and update many VMs.

Virtual machines in a scale set can be deployed across multiple update domains and fault domains to maximize availability and resilience to outages due to data center outages, and planned or unplanned maintenance events.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability>

CertyIQ

Question: 123

You need to be notified when Microsoft plans to perform maintenance that can affect the resources deployed to an Azure subscription.

What should you use?

- A. Azure Monitor
- B. Azure Service Health
- C. Azure Advisor
- D. Microsoft Trust Center

Answer: B

Explanation:

Azure Service Health provides a personalized view of the health of the Azure services and regions you're using. This is the best place to look for service impacting communications about outages, planned maintenance activities, and other health advisories because the authenticated Service Health experience knows which services and resources you currently use.

Reference:

<https://docs.microsoft.com/en-us/azure/service-health/overview>

Question: 124**CertyIQ**

DRAG DROP -

Match the Azure Services service to the correct description.

Instructions: To answer, drag the appropriate service from the column on the left to its description on the right.

Each service may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

Select and Place:

Services	Answer Area	
Azure Sphere	<input type="text"/>	A managed service that provides bidirectional communication between IoT devices and Azure
IoT Central	<input type="text"/>	A fully managed software as a service (SaaS) solution to connect, monitor, and manage IoT devices at scale
IoT Hub	<input type="text"/>	A software and hardware solution that provides communication and security features for IoT devices

Answer:

Services	Answer Area	
	<input type="text"/> IoT Hub	A managed service that provides bidirectional communication between IoT devices and Azure
	<input type="text"/> IoT Central	A fully managed software as a service (SaaS) solution to connect, monitor, and manage IoT devices at scale

<https://blog.abouttmc.com/azure-cloud-total-cost-of-ownership>

Question: 127

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes

No

You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.

You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.

You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.

Answer:

Answer Area

Statements

Yes

No

You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.

You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.

You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.

Explanation:

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. Availability Zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. To ensure resiliency, there are a minimum of three separate zones in all enabled regions. The physical separation of Availability Zones within a region protects applications and data from datacenter failures.

With Availability Zones, Azure offers industry best 99.99% VM uptime SLA. By architecting your solutions to use replicated VMs in zones, you can protect your applications and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/manage-availability>

Question: 128

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
An Azure subscription can have multiple account administrators	<input type="radio"/>	<input type="radio"/>
An Azure subscription can be managed by using a Microsoft account only	<input type="radio"/>	<input type="radio"/>
An Azure resource group can contain multiple Azure subscriptions	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
An Azure subscription can have multiple account administrators	<input type="radio"/>	<input checked="" type="radio"/>
An Azure subscription can be managed by using a Microsoft account only	<input type="radio"/>	<input checked="" type="radio"/>
An Azure resource group can contain multiple Azure subscriptions	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1 : No

You can assign service administrators and co-administrators in the Azure Portal but there can only be one account administrator.

Box2:No

Azure subscriptions can be managed using both:

Microsoft accounts (e.g., personal accounts like Outlook/Hotmail).

Azure Active Directory (AAD) accounts, which are organizational accounts.

Limiting management to only Microsoft accounts is incorrect.

Box 3 : No

A resource group in Azure is a logical container that organizes resources within a single subscription.

You cannot have resources from multiple subscriptions within the same resource group.

Question: 129

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An Azure region

contains one or more data centers that are connected by using a low-latency network.

is found in each country where Microsoft has a subsidiary office.

can be found in every country in Europe and the Americas only.

contains one or more data centers that are connected by using a high-latency network.

Answer:

Answer Area

An Azure region

contains one or more data centers that are connected by using a low-latency network.

is found in each country where Microsoft has a subsidiary office.

can be found in every country in Europe and the Americas only.

contains one or more data centers that are connected by using a high-latency network.

Explanation:

A region is a set of data centres deployed within a latency-defined perimeter and connected through a dedicated regional low-latency network.

Microsoft Azure currently has 55 regions worldwide.

Regions are divided into Availability Zones. Availability Zones are physically separate locations within an Azure region. Each Availability Zone is made up of one or more datacenters equipped with independent power, cooling, and networking.

<https://docs.microsoft.com/en-us/azure/active-directory/enterprise-users/groups-dynamic-membership> <https://petri.com/understanding-hybrid-azure-active-directory-join>

Question: 131

CertyIQ

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines remain available if a single data center fails.

What are two possible solutions? Each correct answer presents a complete solution.

- A. Deploy the virtual machines to two or more availability zones.
- B. Deploy the virtual machines to two or more resource groups.
- C. Deploy the virtual machines to a scale set.
- D. Deploy the virtual machines to two or more regions.

Answer: AD**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/overview> <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/regions>

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must

- be deployed to a separate virtual network.
- run a different operating system than the other virtual machines.
- be deployed to a separate resource group.
- have two network interfaces.

Answer:**Answer Area**

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must

- be deployed to a separate virtual network.
- run a different operating system than the other virtual machines.
- be deployed to a separate resource group.
- have two network interfaces.

Explanation:

Azure automatically routes traffic between subnets in a virtual network. Therefore, all virtual machines in a virtual network can connect to the other virtual machines in the same virtual network. Even if the virtual machines are on separate subnets within the virtual network, they can still communicate with each other. To ensure that a virtual machine cannot connect to the other virtual machines, the virtual machine must be deployed to a separate virtual network.

Reference:<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-networks-udr-overview>**DRAG DROP -**

Match the Azure service to the appropriate description.

To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Services

Azure Cosmos DB

Azure HDInsight

Azure Synapse Analytics

Answer Area

A fully managed data warehouse that has integral security at every level of scale at no extra cost.

A globally distributed database that supports NoSQL.

Managed Apache Hadoop clusters in the cloud that enable you to process massive amounts of data.

Answer:**Services****Answer Area**

Azure Synapse Analytics

A fully managed data warehouse that has integral security at every level of scale at no extra cost.

Azure Cosmos DB

A globally distributed database that supports NoSQL.

Azure HDInsight

Managed Apache Hadoop clusters in the cloud that enable you to process massive amounts of data.

Explanation:

azure synapse analytics = Warehouse

Azure cosmos = even larger than the globe (global) : cosmos

Azure HDInsight = HaDoop

Azure synapse analytics used to be called Azure SQL Data Warehouse

<https://azure.microsoft.com/en-us/blog/azure-sql-data-warehouse-is-now-azure-synapse-analytics/>

Azure cosmos is the only database that supports NoSQL.

<https://www.sqlshack.com/learn-nosql-in-azure-an-overview-of-azure-cosmos-db/>

Azure HDInsight :

<https://docs.microsoft.com/en-us/azure/hdinsight/hdinsight-hadoop-provision-linux-clusters>

Question: 134**CertyIQ**

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area**Statements****Yes No**

The Archive access tier is set at the storage account level.

The Hot access tier is recommended for data that is accessed and modified frequently.

The Cool access tier is recommended for long term backups.

Answer:

Answer Area

Statements	Yes	No
The Archive access tier is set at the storage account level.	<input type="radio"/>	<input checked="" type="radio"/>
The Hot access tier is recommended for data that is accessed and modified frequently.	<input checked="" type="radio"/>	<input type="radio"/>
The Cool access tier is recommended for long term backups.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: NO.

from Azure document: "Only the hot and cool access tiers can be set at the account level. The archive access tier can only be set at the blob level."

Please see: <https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-storage-tiers>

Box 2: Yes -

Usage scenarios for the hot access tier include:

- ⇒ Data that is in active use or is expected to be read from and written to frequently
- ⇒ Data that is staged for processing and eventual migration to the cool access tier

Box 3: No -

Usage scenarios for the cool access tier include:

- ⇒ Short-term backup and disaster recovery
- ⇒ Older data not used frequently but expected to be available immediately when accessed

Large data sets that need to be stored cost effectively, while more data is being gathered for future processing

▪

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-storage-tiers>

Question: 135

CertyIQ

What is the most severe failure from which an Azure Availability Zone can be used to protect access to Azure service?

- A. a physical server failure
- B. an Azure region failure
- C. a storage failure
- D. an Azure data center failure

Answer: D

Explanation:

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. An Availability Zone is a physically separate zone, within an Azure region. There are three Availability Zones per supported Azure region.

Each Availability Zone has a distinct power source, network, and cooling. By architecting your solutions to use replicated VMs in zones, you can protect your apps and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

<https://docs.microsoft.com/en-us/azure/virtual-machines/availability>

CertyIQ

Question: 136

You need to purchase a third-party virtual security appliance that you will deploy to an Azure subscription. What should you use?

- A. Azure subscriptions
- B. Azure Security Center
- C. Azure Marketplace
- D. Microsoft Store

Answer: C

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/ea-azure-marketplace>

CertyIQ

Question: 137

DRAG DROP -

Match the serverless solution to the correct characteristic.

To answer, drag the appropriate serverless solution from the column on the left to its characteristic on the right. Each serverless solution may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Serverless Solutions

Azure Functions

Azure Logic Apps

Answer Area

Executes code:

Is always stateful:

Runs only in the cloud:

Answer:

Serverless Solutions

Azure Functions

Azure Logic Apps

Executes code:

Azure Functions

Is always stateful:

Azure Logic Apps

Runs only in the cloud:

Azure Logic Apps

Explanation:

Box 1: Azure Functions .

Azure Functions allows you to implement your system's logic into readily available blocks of code called "functions". Different functions can run anytime you need to respond to critical events.

Box 2: Azure Logic Apps.

Box 3: Azure Logic Apps -

Azure Logic Apps is a cloud-based platform for creating and running automated workflows that integrate your apps, data, services, and systems.

Question: 138

CertyIQ

DRAG DROP -

Match the Azure governance feature to the correct description.

Instructions: To answer, drag the appropriate feature from the column on the left to its description on the right. Each feature may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Features

Answer Area

Azure Blueprints

Restrict which virtual machine types can be created in a subscription.

Azure Policy

Identify Azure resources that are associated with specific cost centers.

Azure resource locks

Deploy a complete Azure application environment including resources configuration and role assignments.

Answer:

Features	Answer Area
Azure Blueprints	Azure Policy Restrict which virtual machine types can be created in a subscription.
Azure Policy	Azure tags Identify Azure resources that are associated with specific cost centers.
Azure resource locks	Azure Blueprints Deploy a complete Azure application environment including resources configuration and role assignments.
Azure tags	

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/governance/blueprints/overview> <https://docs.microsoft.com/en-us/azure/governance/policy/overview> <https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-resources?tabs=json> <https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/lock-resources?tabs=json>

Question: 139

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

An Availability Zone in Azure has physically separate locations

across two continents
within a single Azure region
within multiple Azure regions
within a single Azure datacenter

Answer:

Answer Area

An Availability Zone in Azure has physically separate locations

across two continents
within a single Azure region
within multiple Azure regions
within a single Azure datacenter

Explanation:

Box: within a single Azure region

Azure availability zones are physically separate locations within each Azure region that are tolerant to local failures.

Reference:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

Question: 140

CertyIQ

DRAG DROP -

Match the Azure services to the correct descriptions.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Services	Answer Area	
Azure Functions		Provide operating system virtualization.
Azure App Service		Provide portable environment for virtualized applications.
Azure virtual machines		Used to build, deploy, and scale web apps.
Azure Container Instances		Provide a platform for serverless code.

Answer:

Services	Answer Area
Azure Functions	Azure virtual machines
Azure App Service	Azure Container Instances
Azure virtual machines	Azure App Service
Azure Container Instances	Azure Functions

Explanation:

Box 1: Azure virtual machines -

Box 2: Azure Container instances

Azure Container Instances (ACI) is a managed service that allows you to run containers directly on the Microsoft Azure public cloud, without requiring the use of virtual machines (VMs).

Develop apps fast without managing virtual machines or having to learn new tools "it's just your application, in a container, running in the cloud.

Box 3: Azure App Service -

Azure App Service is a fully managed platform for building web applications.

Applications run and scale with ease on both Windows and Linux-based environments.

Box 4: Azure Functions -

Azure Functions (from Microsoft Azure) is a cloud-based serverless service that allows running event-triggered code in a scalable way without providing or managing infrastructure.

Reference:

<https://docs.microsoft.com/en-us/azure/container-instances>

<https://azure.microsoft.com/en-us/services/app-service/>

<https://revdebug.com/blog/what-are-azure-functions>

Question: 141

CertyIQ

HOTSPOT -

To answer, select the appropriate option in the answer area.

Hot Area:

Answer Area

You have several virtual machines in an Azure subscription. You create a new subscription.

The virtual machines cannot be moved to the new subscription.

The virtual machines can be moved to the new subscription.

The virtual machines can be moved to the new subscription only if they are all in the same resource group.

The virtual machines can be moved to the new subscription only if they run Windows Server 2019.

Answer:

Answer Area

You have several virtual machines in an Azure subscription. You create a new subscription.

The virtual machines cannot be moved to the new subscription.
The virtual machines can be moved to the new subscription.
The virtual machines can be moved to the new subscription only if they are all in the same resource group.
The virtual machines can be moved to the new subscription only if they run Windows Server 2019.

Explanation:

Box: The virtual machines can be moved to the new subscription.

You can move a VM and its associated resources to a different subscription by using the Azure portal.

Note: Repeat the process below for each Resource Group containing the VMs.

1. Go to the Azure portal to manage the resource group containing the VM to move. Search for and select Resource groups.
2. Choose the resource group containing the VM that you would like to move.
3. At the top of the page for the resource group, select Move and then select Move to another subscription. The Move resources page opens.
4. Select each of the resources to move. In most cases, you should move all of the related resources that are listed.
5. Select the Subscription where you want the VM to be moved.
6. Select an existing Resource group, or enter a name to have a new resource group created.
7. When you are done, select that you understand that new resource IDs will be created and that the new IDs will need to be used with the VM after it is moved, and then select OK.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/move-vm>

Question: 142

CertyIQ

You need to purchase a third-party virtual security appliance that you will deploy to an Azure subscription. What should you use?

- A. Azure subscriptions
- B. Microsoft Defender for Cloud
- C. Azure Marketplace
- D. Microsoft Store

Answer: C

Explanation:

You can access these enhanced network security features by using an Azure partner solution. You can find the most current Azure partner network security solutions by visiting the Azure Marketplace, and searching for "security" and "network security."

Some third-party reseller services available on Azure Marketplace now consume your Enterprise Agreement (EA) Azure Prepayment balance.

Reference:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/network-overview> <https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/ea-azure-marketplace>

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

	▼
Azure Arc	
Azure IoT Central	
Azure IoT Hub	
Azure Sphere	

is a highly secure IoT solution that includes a microcontroller unit (MCU) and a customized Linux operating system.

Answer:

Answer Area

	▼
Azure Arc	
Azure IoT Central	
Azure IoT Hub	
Azure Sphere	

is a highly secure IoT solution that includes a microcontroller unit (MCU) and a customized Linux operating system.

Explanation:

Microsoft's Azure Sphere hardware and service designed to better secure Internet of Things (IoT) devices.

Azure Sphere consists of Microsoft-certified microcontrollers " single-chip computers with processors, storage, memory and IoT capabilities " plus the Azure Sphere Linux-based OS and the Azure Sphere cloud security service.

Reference:

<https://www.zdnet.com/article/microsofts-azure-sphere-its-linux-based-microcontroller-plus-cloud-service-hits-general-availability/>

You plan to deploy a service to Azure virtual machines.

You need to ensure that the service will be available if a datacenter fails.

What should you use as part of the virtual machine deployment?

- A. availability sets
- B. proximity placement groups
- C. host groups
- D. availability zones

Answer: D

Explanation:

Azure availability zones are physically separate locations within each Azure region that are tolerant to local failures. Failures can range from software and hardware failures to events such as earthquakes, floods, and fires. Tolerance to failures is achieved because of redundancy and logical isolation of Azure services. To ensure resiliency, a minimum of three separate availability zones are present in all availability zone-enabled regions.

Reference:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

CertyIQ**Question: 145**

Your company has an Azure subscription that contains resources in several regions.

You need to ensure that administrators can only create resources in those regions.

What should you use?

- A. a read-only lock
- B. an Azure policy
- C. a management group
- D. a reservation

Answer: B**Explanation:**

Policy is correct.

reference:

<https://learn.microsoft.com/en-us/azure/governance/management-groups/overview>

"For example, you can apply policies to a management group that limits the regions available for virtual machine (VM) creation. This policy would be applied to all nested management groups, subscriptions, and resources, and allow VM creation only in authorized regions.

CertyIQ**Question: 146**

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

An Azure region

contains one or more data centers that are connected by using a low-latency network.
is found in each country where Microsoft has a subsidiary office.
can be found in every country in Europe and the Americas only.
contains one or more data centers that are connected by using a high-latency network.

Answer:

Answer Area

An Azure region

contains one or more data centers that are connected by using a low-latency network.
is found in each country where Microsoft has a subsidiary office.
can be found in every country in Europe and the Americas only.
contains one or more data centers that are connected by using a high-latency network.

Explanation:

Box: contains one or more data centers that are connected by using a low-latency network.

Each Azure region features datacenters deployed within a latency-defined perimeter. They're connected through a dedicated regional low-latency network. This design ensures that Azure services within any region offer the best possible performance and security.

Reference:

<https://docs.microsoft.com/en-us/azure/availability-zones/az-overview>

CertyIQ

Question: 147

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

You can use the Azure File Sync agent to sync on-premises data to an Azure

blob container.
Data Lake Storage container.
file share.
queue.

Answer:

Answer Area

You can use the Azure File Sync agent to sync on-premises data to an Azure

blob container.
Data Lake Storage container.
file share.
queue.

Explanation:

The Azure File Sync agent enables data on a Windows Server to be synchronized with an Azure File share.

Reference:

<https://www.microsoft.com/en-us/download/details.aspx?id=57159>

CertyIQ

Question: 148

What is the function of a Site-to-Site VPN?

- A. provides a secure connection between a computer on a public network and the corporate network
- B. provides a dedicated private connection to Azure that does NOT travel over the internet

C. provides a connection from an on-premises VPN device to an Azure VPN gateway

Answer: C

Explanation:

A Site-to-Site VPN gateway connection is used to connect your on-premises network to an Azure virtual network over an IPsec/IKE (IKEv1 or IKEv2) VPN tunnel.

This type of connection requires a VPN device located on-premises that has an externally facing public IP address assigned to it.

Example:

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-howto-site-to-site-classic-portal>

Question: 149

CertyIQ

DRAG DROP -

Match the cloud service models to the appropriate offerings.

To answer, drag the appropriate model from the column on the left to its offering on the right. Each model may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Models

Infrastructure as a service (IaaS)

Platform as a service (PaaS)

Software as a service (SaaS)

Answer Area

Azure App Service

Azure virtual machines

Microsoft Dynamics 365

Answer:

Models

Infrastructure as a service (IaaS)

Platform as a service (PaaS)

Software as a service (SaaS)

Answer Area

Platform as a service (PaaS)

Azure App Service

Infrastructure as a service (IaaS)

Azure virtual machines

Software as a service (SaaS)

Microsoft Dynamics 365

Explanation:

Box 1: Platform as a service (PaaS)

Azure App Service is a fully managed platform for building web applications.

Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.

Box 2: Infrastructure as a service (IaaS)

Windows Azure Virtual Machines, an Infrastructure-as-a-Service (IaaS) offering in Windows Azure, was released back in 2012.

Box 3: Software as a service (SaaS)

Dynamics 365 is a set of interconnected, modular Software-as-a-Service (SaaS) applications and services designed to both transform and enable your core customers, employees, and business activities.

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-paas/>

<https://azure.microsoft.com/en-us/blog/infrastructure-as-a-service-series-virtual-machines-and-windows/> <http://pipol.com/what-is-microsoft-dynamics-365>

Question: 150

CertyIQ

DRAG DROP -

Match the cloud service models to the appropriate solutions.

To answer, drag the appropriate cloud service model from the column on the left to its solution on the right. Each cloud service model may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Area	
Infrastructure-as-a-Service (IaaS)	A cloud-based file server
Platform-as-a-Service (PaaS)	A cloud-based accounting system
Software-as-a-Service (SaaS)	A cloud-based service for custom apps

Answer:

Answer Area	
Infrastructure-as-a-Service (IaaS)	A cloud-based file server
Platform-as-a-Service (PaaS)	A cloud-based accounting system
Software-as-a-Service (SaaS)	A cloud-based service for custom apps

Explanation:

Box 1: Infrastructure as a service (IaaS)

Azure Files is a simple, secure, and serverless enterprise-grade cloud file shares.

Infrastructure as a service (IaaS) is a type of cloud computing service that offers essential compute, storage, and networking resources on demand, on a pay-as-you-go basis.

Box 2: Software as a service (SaaS)

Dynamics 365 is a set of interconnected, modular Software-as-a-Service (SaaS) applications and services designed to both transform and enable your core customers, employees, and business activities. It includes Dynamics 365 Finance: use the guided, rules-based chart of accounts and no-code configuration service to

simplify regulatory reporting, electronic invoicing, and global payments.

Box 3: Platform as a service (PaaS)

Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.

Reference:

<https://azure.microsoft.com/en-us/overview/what-is-iaas>

<https://azure.microsoft.com/en-us/overview/what-is-paas/>

CertyIQ

Question: 151

You need to manage containers.

Which two services can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Azure Virtual Desktop
- B. Azure virtual machines
- C. Azure Functions
- D. Azure Container Instances
- E. Azure Kubernetes Service (AKS)

Answer: DE

Explanation:

Run Docker containers on-demand in a managed, serverless Azure environment. Azure Container Instances is a solution for any scenario that can operate in isolated containers, without orchestration. Run event-driven applications, quickly deploy from your container development pipelines, and run data processing and build jobs.

You can manage containers at scale with a fully managed Kubernetes container management and orchestration service that integrates with Azure Active Directory.

Azure Kubernetes Service is a robust and cost-effective container orchestration service that helps you to deploy and manage containerized applications in seconds where additional resources are assigned automatically without the headache of managing additional servers.

Reference:

<https://docs.microsoft.com/en-us/azure/container-instances/>

<https://cloudacademy.com/blog/azure-kubernetes-service-aks-what-is-it-and-why-do-we-use-it>

CertyIQ

Question: 152

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

- to the same Azure region.
- by using the same Azure Resource Manager template.
- to the same resource group.
- to the same availability zone.

Answer:

Answer Area

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

- to the same Azure region.
- by using the same Azure Resource Manager template.
- to the same resource group.
- to the same availability zone.

Explanation:

A resource group is a logical container for Azure resources. Resource groups make the management of Azure resources easier.

With a resource group, you can allow a user to manage all resources in the resource group, such as virtual machines, websites, and subnets. The permissions you apply to the resource group apply to all resources contained in the resource group.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/overview#resource-groups> <https://docs.microsoft.com/en-us/azure/role-based-access-control/overview>

Question: 153

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to two or more availability zones.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. An Availability Zone is a physically separate zone, within an Azure region. There are three Availability Zones per supported Azure region.

Each Availability Zone has a distinct power source, network, and cooling. By architecting your solutions to use

replicated VMs in zones, you can protect your apps and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability>

Question: 154

CertyIQ

This question requires that you evaluate the underlined text to determine if it is correct.

One of the benefits of Azure SQL Data Warehouse is that high availability is built into the platform.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. automatic scaling
- C. data compression
- D. versioning

Answer: A

Explanation:

Azure Data Warehouse (now known as Azure Synapse Analytics) is a PaaS offering from Microsoft. As with all PaaS services from Microsoft, SQL Data

Warehouse offers an availability SLA of 99.9%. Microsoft can offer 99.9% availability because it has high availability features built into the platform.

Reference:

<https://docs.microsoft.com/en-us/azure/sql-data-warehouse/sql-data-warehouse-overview-faq>

Question: 155

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to two or more regions.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

By deploying the virtual machines to two or more regions, you are deploying the virtual machines to multiple datacenters. This will ensure that the services running on the virtual machines are available if a single data center fails.

Azure operates in multiple datacenters around the world. These datacenters are grouped in to geographic regions, giving you flexibility in choosing where to build your applications.

You create Azure resources in defined geographic regions like 'West US', 'North Europe', or 'Southeast Asia'.

You can review the list of regions and their locations.

Within each region, multiple datacenters exist to provide for redundancy and availability.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/regions>

Question: 156

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

An Azure container instance is an example of an Azure

Answer:

An Azure container instance is an example of an Azure

Explanation:

The term compute refers to the hosting model for the computing resources that your application runs on. For Azure this include:

Azure Container Instances. The fastest and simplest way to run a container in Azure, without having to provision any virtual machines and without having to adopt a higher-level service.

Note, and also the following:

Azure App Service. A managed service for hosting web apps, mobile app back ends, RESTful APIs, or automated business processes.

Azure Spring Cloud. A managed service designed and optimized for hosting Spring Boot apps.

Azure Kubernetes Service (AKS). A managed Kubernetes service for running containerized applications.

Azure Batch. A managed service for running large-scale parallel and high-performance computing (HPC) applications

Azure Functions. A managed FaaS service.

Azure Service Fabric. A distributed systems platform that can run in many environments, including Azure or on premises.

Azure Virtual machines. Deploy and manage VMs inside an Azure virtual network.

Azure Container Apps. Deploy and manage VMs inside an Azure virtual network.

<https://docs.microsoft.com/en-us/azure/architecture/guide/technology-choices/compute-decision-tree>

Question: 157

CertyIQ

At which OSI layer does ExpressRoute operate?

- A. Layer 2
- B. Layer 3
- C. Layer 5
- D. Layer 7

Answer: B**Explanation:**

Layer 3

<https://learn.microsoft.com/en-us/azure/expressroute/expressroute-introduction#key-benefits>

Layer 3 connectivity between your on-premises network and the Microsoft Cloud through a connectivity provider. Connectivity can be from an any-to-any (IPVPN) network, a point-to-point Ethernet connection, or through a virtual cross-connection via an Ethernet exchange.

Question: 158

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Application Insights is a feature of

**Answer:**

Application Insights is a feature of

**Explanation:**

Application Insights is a feature of Azure Monitor that provides extensible application performance management (APM) and monitoring for live web apps.

Reference:

Question: 159

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure resources can only access other resources in the same resource group.	<input type="radio"/>	<input type="radio"/>
If you delete a resource group, all the resources in the resource group will be deleted.	<input type="radio"/>	<input type="radio"/>
A resource group can contain resources from multiple Azure regions.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure resources can only access other resources in the same resource group.	<input type="radio"/>	<input checked="" type="radio"/>
If you delete a resource group, all the resources in the resource group will be deleted.	<input checked="" type="radio"/>	<input type="radio"/>
A resource group can contain resources from multiple Azure regions.	<input type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

A resource can interact with resources in other resource groups.

Box 2: Yes -

Deleting the resource group will remove the resource group as well as all the resources in that resource group. This can be useful for the management of resources. For example, a virtual machine has several components (the VM itself, virtual disks, network adapter etc.). By placing the VM in its own resource group, you can delete the VM along with all its associated components by deleting the resource group.

Another example is when creating a test environment. You could place the entire test environment (Network components, virtual machines etc.) in one resource group. You can then delete the entire test environment by deleting the resource group.

Box 3: Yes -

Resources from multiple different regions can be placed in a resource group. The resource group only contains metadata about the resources it contains.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-overview> <https://www.codecademy.com/effective-ways-to-delete-resources-in-a-resource-group-on-azure/>

Question: 160

CertyIQ

You plan to store 20 TB of data in Azure. The data will be accessed infrequently and visualized by using Microsoft Power BI.

You need to recommend a storage solution for the data.

Which two solutions should you recommend? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Azure Data Lake
- B. Azure Cosmos DB
- C. Azure SQL Data Warehouse
- D. Azure SQL Database
- E. Azure Database for PostgreSQL

Answer: AC**Explanation:**

Azure SQL Data Warehouse is now Azure Synapse Analytics

You can use Power BI to analyze and visualize data stored in Azure Data Lake and Azure SQL Data Warehouse.

Azure Data Lake includes all of the capabilities required to make it easy for developers, data scientists and analysts to store data of any size and shape and at any speed, and do all types of processing and analytics across platforms and languages. It removes the complexities of ingesting and storing all your data while making it faster to get up and running with batch, streaming and interactive analytics. It also integrates seamlessly with operational stores and data warehouses so that you can extend current data applications.

References:

<https://docs.microsoft.com/en-us/azure/data-lake-store/data-lake-store-power-bi>

<https://azure.microsoft.com/en-gb/solutions/data-lake/> <https://docs.microsoft.com/en-us/azure/data-lake-store/data-lake-store-power-bi>

Question: 161

CertyIQ

HOTSPOT -

You have an Azure environment that contains 10 web apps. To which URL should you connect to manage all the Azure resources? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

https://

admin.
portal.
www.

.com

azure.
azurewebsites.
microsoft.

Answer:

Answer Area

https://

admin.
portal.
www.

azure.
azurewebsites.
microsoft.

.com

Explanation:

The Azure portal is a web-based management interface where you can view and manage all your Azure resources in one unified hub, including web apps, databases, virtual machines, virtual networks, storage and Visual Studio team projects.

The URL of the Azure portal is <https://portal.azure.com>.

Reference:

<https://azure.microsoft.com/en-gb/features/azure-portal/>

CertyIQ

Question: 162

DRAG DROP -

Arrange the storage account redundancy options from the least redundant to the most redundant. To answer, move all options from the list of options to the answer area and arrange them in the correct order.

Select and Place:

Redundancy options

- Zone-redundant storage (ZRS)
- Geo-redundant storage (GRS)
- Locally-redundant storage (LRS)

Answer Area

Answer:

Redundancy options

Answer Area

- Locally-redundant storage (LRS)
- Zone-redundant storage (ZRS)
- Geo-redundant storage (GRS)

Explanation:

Locally-redundant storage (LRS)

Zone-redundant storage (ZRS)

Geo-redundant storage (GRS)

Question: 163

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Azure Blob Storage is a

- data store for queuing and reliably delivering messages between applications.
- file share that can be mapped as a network drive.
- key/attribute store for non-relational, structured data.
- storage service optimized for very large objects, such as video files and bitmaps.

Answer:

Answer Area

Azure Blob Storage is a

- data store for queuing and reliably delivering messages between applications.
- file share that can be mapped as a network drive.
- key/attribute store for non-relational, structured data.
- storage service optimized for very large objects, such as video files and bitmaps.

Explanation:

Azure Blob storage is mainly used for unstructured large files such as audio, video, images, backup files, etc

Question: 164

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Solution: Run the script from a computer that runs Linux and has the Azure CLI tools installed.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

A PowerShell script is a file that contains PowerShell cmdlets and code. A PowerShell script needs to be run in PowerShell.

PowerShell can now be installed on Linux. However, the question states that the computer has Azure CLI tools, not PowerShell installed. Therefore, this solution does not meet the goal.

Reference:

<https://docs.microsoft.com/en-us/powershell/scripting/components/ise/how-to-write-and-run-scripts-in-the-windows-powershell-ise?view=powershell-6>

Question: 165

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Solution: Run the script from a computer that runs Chrome OS and uses Azure Cloud Shell.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

A PowerShell script is a file that contains PowerShell cmdlets and code. A PowerShell script needs to be run in PowerShell.

With the Azure Cloud Shell, you can run PowerShell cmdlets and scripts in a Web browser. You log in to the Azure Portal and select the Azure Cloud Shell option.

This will open a PowerShell session in the Web browser. The Azure Cloud Shell has the necessary Azure PowerShell module installed.

Note: to run a PowerShell script in the Azure Cloud Shell, you need to change to the directory where the PowerShell script is stored.

Reference:

Question: 166

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
From Azure Service Health, an administrator can view the health of all the services in an Azure environment.	<input type="radio"/>	<input type="radio"/>
From Azure Service Health, an administrator can create a rule to be alerted if an Azure service fails.	<input type="radio"/>	<input type="radio"/>
From Azure Service Health, an administrator can prevent a service failure	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
From Azure Service Health, an administrator can view the health of all the services in an Azure environment.	<input checked="" type="radio"/>	<input type="radio"/>
From Azure Service Health, an administrator can create a rule to be alerted if an Azure service fails.	<input checked="" type="radio"/>	<input type="radio"/>
From Azure Service Health, an administrator can prevent a service failure	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes -

Azure Service Health consists of three components: Azure Status, Azure Service Health and Azure Resource Health.

Azure service health provides a personalized view of the health of the Azure services and regions you're using. This is the best place to look for service impacting communications about outages, planned maintenance activities, and other health advisories because the authenticated Azure Service Health experience knows which services and resources you currently use.

To view the health of all other services available in Azure, you would use the Azure Status component of Azure Service Health. Azure status informs you of service outages in Azure on the Azure Status page. The page is a global view of the health of all Azure services across all Azure regions.

Box 2: Yes -

The best way to use Service Health is to set up Service Health alerts to notify you via your preferred communication channels when service issues, planned maintenance, or other changes may affect the Azure services and regions you use.

Box 3: No -

You can use Resource Health to view the health of a virtual machine. However, you cannot use Resource Health to prevent a service failure affecting the virtual machine.

Azure resource health provides information about the health of your individual cloud resources such as a specific virtual machine instance.

Reference:

<https://docs.microsoft.com/en-us/azure/service-health/overview>

CertyIQ

Question: 167

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Solution: Run the script from a computer that runs macOS and has PowerShell Core 6.0 installed.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The computer has PowerShell Core 6.0, but it doesn't have the Azure CLI installed. There is no mention of that in the question. You need Azure PowerShell module in addition to PowerShell to run Azure commands, such as New-AzVM.

Therefore, the answer = B, No.

PowerShell Core 6.0 will not bring Azure Powershell module in default. Therefore you have to install azure PowerShell module after installing PowerShell Core 6.0 into Mac. This means you need PowerShell Core 6.0 on your Mac to run the cmdlets of Azure PowerShell module.

Mac has Bash and does not come with PowerShell which is for Windows Machines.

To install PowerShell for Mac

<https://www.google.com/search?client=safari&rls=en&q=Install+Powershell+for+Mac&ie=UTF-8&oe=UTF-8>

To install the Azure Az PowerShell module

<https://learn.microsoft.com/en-us/powershell/azure/install-az-ps?view=azps-9.1.0>

CertyIQ

Question: 168

HOTSPOT -

You need to view a list of planned maintenance events that can affect the availability of an Azure subscription.

Which blade should you use from the Azure portal? To answer, select the appropriate blade in the answer area.

Hot Area:

Microsoft Azure

New

All services

FAVORITES

Dashboard

All resources

Resource groups

App Services

Function Apps

SQL databases

Azure Cosmos DB

Virtual machines

Load balancers

Answer:

Microsoft Azure

New

All services

FAVORITES

Dashboard

All resources

Resource groups

App Services

Function Apps

SQL databases

Azure Cosmos DB

Virtual machines

Load balancers

Explanation:

On the Help and Support blade, there is a Service Health option. If you click Service Health, a new blade opens. The Service Health blade contains the Planned Maintenance link which opens a blade where you can view a list of planned maintenance events that can affect the availability of an Azure subscription.

Question: 169

CertyIQ

DRAG DROP -

Match the Azure service to the correct definition.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Options

Azure Advisor

Azure Cognitive Services

Azure Application Insights

Azure DevOps

Answer Area

An integrated solution for the deployment of code

A tool that provides guidance and recommendations to improve an Azure environment

A simplified tool to build intelligent Artificial Intelligence (AI) applications

Monitors web applications

Answer:**Answer Options**

Azure Advisor

Azure Cognitive Services

Azure Application Insights

Azure DevOps

Answer Area

Azure DevOps

Azure Advisor

Azure Cognitive Services

Azure Application Insights

An integrated solution for the deployment of code

A tool that provides guidance and recommendations to improve an Azure environment

A simplified tool to build intelligent Artificial Intelligence (AI) applications

Monitors web applications

Explanation:

Box 1: Azure DevOps.

Azure DevOps is Microsoft's primary software development and deployment platform.

DevOps influences the application lifecycle throughout its plan, develop, deliver and operate phases.

Box 2: Azure Advisor.

Advisor is a personalized cloud consultant that helps you follow best practices to optimize your Azure deployments. It analyzes your resource configuration and usage telemetry and then recommends solutions that can help you improve the cost effectiveness, performance, high availability, and security of your Azure resources.

Box 3: Azure Cognitive Services.

Azure Cognitive Services are APIs, SDKs, and services available to help developers build intelligent applications without having direct AI or data science skills or knowledge. Azure Cognitive Services enable developers to easily add cognitive features into their applications. The goal of Azure Cognitive Services is to help developers create applications that can see, hear, speak, understand, and even begin to reason. The catalog of services within Azure Cognitive Services can be categorized into five main pillars - Vision, Speech, Language, Web Search, and Decision.

Box 4. Azure Application Insights.

Azure Application Insights detects and diagnoses anomalies in web apps.

Application Insights, a feature of Azure Monitor, is an extensible Application Performance Management (APM) service for developers and DevOps professionals.

Use it to monitor your live applications. It will automatically detect performance anomalies, and includes

powerful analytics tools to help you diagnose issues and to understand what users actually do with your app.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/app/app-insights-overview> <https://azure.microsoft.com/en-gb/overview/what-is-devops/> <https://docs.microsoft.com/en-us/azure/advisor/advisor-overview> <https://docs.microsoft.com/en-us/azure/cognitive-services/welcome>

Question: 170

CertyIQ

DRAG DROP -

Match the Azure service to the correct description.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Options	Answer Area
Azure HDInsight	A managed relational cloud database service.
Azure Data Lake Analytics	A cloud-based service that leverages massively parallel processing (MPP) to quickly run complex queries across petabytes of data in a relational database.
Azure SQL Synapse Analytics	Can run massively parallel data transformation and processing programs across petabytes of data
Azure SQL Database	An open-source framework for the distributed processing and analysis of big data sets in clusters

Answer:

Answer Options	Answer Area
	Azure SQL Database
	Azure SQL Synapse Analytics
	Azure Data Lake Analytics
	Azure HDInsight

Explanation:

Clue:

Relational: Sql

Massive: Synapse

Massive PetaByte: Lake

Opensource: Insight

Box 1: Azure SQL Database -

SQL Server is a relational database service. Azure SQL Database is a managed SQL Server Database in Azure. The SQL Server is managed by Microsoft; you just have access to the database.

Box 2: Azure SQL Synapse Analytics

Azure SQL Synapse Analytics (previously called Data Warehouse) is a cloud-based Platform-as-a-Service (PaaS) offering from Microsoft. It is a large-scale, distributed, MPP (massively parallel processing) relational database technology in the same class of competitors as Amazon Redshift or Snowflake. Azure SQL

Synapse Analytics is an important component of the Modern Data Warehouse multi-platform architecture. Because Azure SQL Synapse Analytics is an MPP system with a shared-nothing architecture across distributions, it is meant for large-scale analytical workloads which can take advantage of parallelism.

Box 3: Azure Data Lake Analytics

You can process big data jobs in seconds with Azure Data Lake Analytics. You can process petabytes of data for diverse workload categories such as querying,

ETL, analytics, machine learning, machine translation, image processing and sentiment analysis by leveraging existing libraries written in .NET languages, R or

Python.

Box 4: Azure HDInsight.

Apache Hadoop was the original open-source framework for distributed processing and analysis of big data sets on clusters. The Hadoop ecosystem includes related software and utilities, including Apache Hive, Apache HBase, Spark, Kafka, and many others.

Azure HDInsight is a fully managed, full-spectrum, open-source analytics service in the cloud for enterprises. The Apache Hadoop cluster type in Azure HDInsight allows you to use HDFS, YARN resource management, and a simple MapReduce programming model to process and analyze batch data in parallel.

Reference:

<https://docs.microsoft.com/en-us/azure/sql-data-warehouse/sql-data-warehouse-overview-what-is>

<https://docs.microsoft.com/bs-latn-ba/azure/hdinsight/hadoop/apache-hadoop-introduction>

<https://www.blue-granite.com/blog/is-azure-sql-data-warehouse-a-good-fit-updated>

<https://azure.microsoft.com/en-gb/services/data-lake-analytics/>

Question: 171

CertyIQ

HOTSPOT -

You need to identify which blades in the Azure portal must be used to perform the following tasks:

- ⇒ View security recommendations.
- ⇒ Monitor the health of Azure services.
- ⇒ Browse available virtual machine images.

Which blade should you identify for each task? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Monitor the health of Azure services:

Monitor
Subscriptions
Marketplace
Advisor

Browse available virtual machine images:

Monitor
Subscriptions
Marketplace
Advisor

View security recommendations:

Monitor
Subscriptions
Marketplace
Advisor

Answer:

Answer Area

Monitor the health of Azure services:

Monitor
Subscriptions
Marketplace
Advisor

Browse available virtual machine images:

Monitor
Subscriptions
Marketplace
Advisor

View security recommendations:

Monitor
Subscriptions
Marketplace
Advisor

Explanation:

Box 1:

Azure Monitor is used to monitor the health of Azure services.

Azure Monitor maximizes the availability and performance of your applications and services by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments. It helps you understand how your applications are performing and proactively identifies issues affecting them and the resources they depend on.

Box 2:

You can browse available virtual machine images in the Azure Marketplace.

Azure Marketplace provides access and information on solutions and services available from Microsoft and their partners. Customers can discover, try, or buy cloud software solutions built on or for Azure. The catalog of 8,000+ listings provides Azure building blocks, such as Virtual Machines (VMs), APIs, Azure apps, Solution Templates and managed applications, SaaS apps, containers, and consulting services.

Box 3.

Azure Advisor displays security recommendations.

Azure Advisor provides you with a consistent, consolidated view of recommendations for all your Azure resources. It integrates with Azure Security Center to bring you security recommendations. You can get security recommendations from the Security tab on the Advisor dashboard.

Security Center helps you prevent, detect, and respond to threats with increased visibility into and control over the security of your Azure resources. It periodically analyzes the security state of your Azure resources. When Security Center identifies potential security vulnerabilities, it creates recommendations. The

recommendations guide you through the process of configuring the controls you need.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/overview> <https://docs.microsoft.com/en-us/azure/marketplace/marketplace-faq-publisher-guide> <https://docs.microsoft.com/en-us/azure/advisor/advisor-security-recommendations>

Question: 172

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.

Solution: You use Bash in Azure Cloud Shell.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

With Azure Cloud Shell, you can create virtual machines using Bash or PowerShell.

Azure Cloud Shell is an interactive, authenticated, browser-accessible shell for managing Azure resources. It provides the flexibility of choosing the shell experience that best suits the way you work, either Bash or PowerShell.

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-shell/quickstart> <https://docs.microsoft.com/en-us/azure/cloud-shell/overview>

Question: 173

CertyIQ

You have an on-premises application that sends email notifications automatically based on a rule.

You plan to migrate the application to Azure.

You need to recommend a serverless computing solution for the application.

What should you include in the recommendation?

- A. a web app
- B. a server image in Azure Marketplace
- C. a logic app
- D. an API app

Answer: C

Explanation:

Azure Logic Apps is a cloud service that helps you schedule, automate, and orchestrate tasks, business processes, and workflows when you need to integrate apps, data, systems, and services across enterprises or organizations. Logic Apps simplifies how you design and build scalable solutions for app integration, data integration, system integration, enterprise application integration (EAI), and business-to-business (B2B) communication, whether in the cloud, on premises, or both.

For example, here are just a few workloads you can automate with logic apps:

- ⇒ Process and route orders across on-premises systems and cloud services.
- ⇒ Send email notifications with Office 365 when events happen in various systems, apps, and services.
- ⇒ Move uploaded files from an SFTP or FTP server to Azure Storage.
- ⇒ Monitor tweets for a specific subject, analyze the sentiment, and create alerts or tasks for items that need review.

Reference:

<https://docs.microsoft.com/en-us/azure/logic-apps/logic-apps-overview>

CertyIQ

Question: 174

You plan to deploy a website to Azure. The website will be accessed by users worldwide and will host large video files.

You need to recommend which Azure feature must be used to provide the best video playback experience. What should you recommend?

- A. an application gateway
- B. an Azure ExpressRoute circuit
- C. a content delivery network (CDN)
- D. an Azure Traffic Manager profile

Answer: C

Explanation:

The question states that users are located worldwide and will be downloading large video files. The video playback experience would be improved if they can download the video from servers in the same region as the users. We can achieve this by using a content deliver network.

A content delivery network (CDN) is a distributed network of servers that can efficiently deliver web content to users. CDNs store cached content on edge servers in point-of-presence (POP) locations that are close to end users, to minimize latency.

Azure Content Delivery Network (CDN) offers developers a global solution for rapidly delivering high-bandwidth content to users by caching their content at strategically placed physical nodes across the world. Azure CDN can also accelerate dynamic content, which cannot be cached, by leveraging various network optimizations using CDN POPs. For example, route optimization to bypass Border Gateway Protocol (BGP).

The benefits of using Azure CDN to deliver web site assets include:

- ⇒ Better performance and improved user experience for end users, especially when using applications in which multiple round-trips are required to load content.
- ⇒ Large scaling to better handle instantaneous high loads, such as the start of a product launch event.
- ⇒ Distribution of user requests and serving of content directly from edge servers so that less traffic is sent to the origin server.

Reference:

<https://docs.microsoft.com/en-us/azure/cdn/cdn-overview>

CertyIQ

Question: 175

Your company plans to deploy several million sensors that will upload data to Azure.

You need to identify which Azure resources must be created to support the planned solution.

Which two Azure resources should you identify? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Azure Data Lake

- B. Azure Queue storage
- C. Azure File Storage
- D. Azure IoT Hub
- E. Azure Notification Hubs

Answer: AD**Explanation:**

IoT Hub (Internet of things Hub) provides data from millions of sensors. IoT Hub is a managed service, hosted in the cloud, that acts as a central message hub for bi-directional communication between your IoT application and the devices it manages. You can use Azure IoT Hub to build IoT solutions with reliable and secure communications between millions of IoT devices and a cloud-hosted solution backend. You can connect virtually any device to IoT Hub.

There are two storage services IoT Hub can route messages to -- Azure Blob Storage and Azure Data Lake Storage Gen2 (ADLS Gen2) accounts. Azure Data Lake Storage accounts are hierarchical namespace-enabled storage accounts built on top of blob storage. Both of these use blobs for their storage.

Reference:

<https://docs.microsoft.com/en-us/azure/iot-hub/about-iot-hub>

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-devguide-messages-d2c>

CertyIQ**Question: 176**

You have an Azure web app.

You need to manage the settings of the web app from an iPhone.

What are two Azure management tools that you can use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Azure CLI
- B. the Azure portal
- C. Azure Cloud Shell
- D. Windows PowerShell
- E. Azure Storage Explorer

Answer: BC**Explanation:**

The Azure portal is the web-based portal for managing Azure. Being web-based, you can use the Azure portal on an iPhone.

Azure Cloud Shell is a web-based command line for managing Azure. You access the Azure Cloud Shell from the Azure portal. Being web-based, you can use the Azure Cloud Shell on an iPhone.

Incorrect Answers:

A: Azure CLI can be installed on MacOS but it cannot be installed on an iPhone.

D: Windows PowerShell can be installed on MacOS but it cannot be installed on an iPhone.

E: Azure Storage Explorer is not used to manage Azure web apps.

Reference:

<http://www.deployazure.com/management/managing-azure-from-ipad/>

Question: 177

CertyIQ

Your company plans to deploy an Artificial Intelligence (AI) solution in Azure. What should the company use to build, test, and deploy predictive analytics solutions?

- A. Azure Logic Apps
- B. Azure Machine Learning Designer
- C. Azure Batch
- D. Azure Cosmos DB

Answer: B**Explanation:**

Azure Machine Learning designer lets you visually connect datasets and modules on an interactive canvas to create machine learning models.

Reference:

<https://docs.microsoft.com/en-us/azure/machine-learning/concept-designer>

Question: 178

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
------------	-----	----

Azure Advisor can generate a list of Azure virtual machines that are protected by Azure Backup.

If you implement the security recommendations provided by Azure Advisor, your company's secure score will decrease.

To maintain Microsoft support, you must implement the security recommendations provided by Azure Advisor within a period of 30 days.

 Answer:

Answer Area

Statements	Yes	No
Azure Advisor can generate a list of Azure virtual machines that are protected by Azure Backup.	<input type="radio"/>	<input checked="" type="radio"/>
If you implement the security recommendations provided by Azure Advisor, your company's secure score will decrease.	<input type="radio"/>	<input checked="" type="radio"/>
To maintain Microsoft support, you must implement the security recommendations provided by Azure Advisor within a period of 30 days.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

Azure Advisor does not generate a list of virtual machines that ARE protected by Azure Backup. Azure Advisor does however, generate a list of virtual that ARE

NOT protected by Azure Backup. You can view a list of virtual machines that are protected by Azure Backup by viewing the Protected Items in the Azure Recovery Services Vault.

Box 2: No -

If you implement the security recommendations, your company's score will increase, not decrease.

Box 3: No -

There is no requirement to implement the security recommendations provided by Azure Advisor. The recommendations are just that, 'recommendations'. They are not 'requirements'.

Reference:

<https://azure.microsoft.com/en-gb/blog/advisor-backup-recommendations/> <https://docs.microsoft.com/en-us/azure/advisor/advisor-overview> <https://microsoft.github.io/AzureTipsAndTricks/blog/tip173.html>

Question: 179

CertyIQ

What can you use to automatically send an alert if an administrator stops an Azure virtual machine?

- A. Azure Advisor
- B. Azure Service Health
- C. Azure Monitor
- D. Azure Network Watcher

Answer: C

Explanation:

Azure Monitor is correct answer.

Azure Service Health provides the health/status of Azure service.

Azure Monitor - Provides Health/Status of your application using insights and logs

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/insights/vminsights-alerts>

CertyIQ

Question: 180

DRAG DROP -

Match the Azure services to the correct descriptions.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point

Select and Place:

Azure Services

- Azure Machine Learning
- Azure Synapse Analytics
- Azure IoT Hub
- Azure Functions

Answer Area

- Provides a cloud-based Enterprise Data Warehouse (EDW).
- Uses past trainings to provide predictions that have high probability.
- Provides serverless computing functionalities.
- Processes data from millions of sensors.

Answer:

Azure Services

Answer Area

- Azure Synapse Analytics
- Azure Machine Learning
- Azure Functions
- Azure IoT Hub

- Provides a cloud-based Enterprise Data Warehouse (EDW).
- Uses past trainings to provide predictions that have high probability.
- Provides serverless computing functionalities.
- Processes data from millions of sensors.

Explanation:

Box 1: Azure SQL Synapse Analytics

Azure SQL Synapse Analytics (previously called Data Warehouse) is a cloud-based Platform-as-a-Service (PaaS) offering from Microsoft. It is a large-scale, distributed, MPP (massively parallel processing) relational database technology in the same class of competitors as Amazon Redshift or Snowflake. Azure SQL Synapse Analytics is an important component of the Modern Data Warehouse multi-platform architecture. Because Azure SQL Synapse Analytics is an MPP system with a shared-nothing architecture across distributions, it is meant for large-scale analytical workloads which can take advantage of parallelism.

Box 2:

Azure Machine Learning uses past trainings to provide predictions that have high probability.

Machine learning is a data science technique that allows computers to use existing data to forecast future behaviors, outcomes, and trends. By using machine learning, computers learn without being explicitly programmed.

Forecasts or predictions from machine learning can make apps and devices smarter. For example, when you shop online, machine learning helps recommend other products you might want based on what you've bought.

Box 3:

Azure Functions provides serverless computing functionalities.

Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.

Box 4:

IoT Hub (Internet of things Hub) provides data from millions of sensors.

IoT Hub is a managed service, hosted in the cloud, that acts as a central message hub for bi-directional communication between your IoT application and the devices it manages. You can use Azure IoT Hub to build IoT solutions with reliable and secure communications between millions of IoT devices and a cloud-hosted solution backend. You can connect virtually any device to IoT Hub.

Reference:

<https://azure.microsoft.com/en-gb/services/synapse-analytics/> <https://docs.microsoft.com/en-us/azure/machine-learning/overview-what-is-azure-ml> <https://docs.microsoft.com/en-us/azure/iot-hub/about-iot-hub> <https://docs.microsoft.com/en-us/azure/azure-functions/functions-overview>

CertyIQ**Question: 181**

You have an Azure environment.

You need to create a new Azure virtual machine from a tablet that runs the Android operating system.

What are three possible solutions? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Use Bash in Azure Cloud Shell.
- B. Use PowerShell in Azure Cloud Shell.
- C. Use the PowerApps portal.
- D. Use the Security & Compliance admin center.
- E. Use the Azure portal.

Answer: ABE**Explanation:**

The Android tablet device will have a web browser (Chrome). That's enough to connect to the Azure portal.

The Azure portal offers three ways to create a VM:

- ⇒ Using the graphical portal.
- ⇒ Using the Azure Cloud Shell using Bash.
- ⇒ Using the Azure Cloud Shell using PowerShell.

CertyIQ**Question: 182**

A team of developers at your company plans to deploy, and then remove, 50 virtual machines each week. All the virtual machines are configured by using Azure Resource Manager templates.

You need to recommend which Azure service will minimize the administrative effort required to deploy and remove the virtual machines.

What should you recommend?

- A. Azure Reserved Virtual Machine (VM) Instances
- B. Azure DevTest Labs
- C. Azure virtual machine scale sets
- D. Azure Virtual Desktop

Answer: B

Explanation:

DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates. By using DevTest Labs, you can test the latest versions of your applications by doing the following tasks:

- ⇒ Quickly provision Windows and Linux environments by using reusable templates and artifacts.
- ⇒ Easily integrate your deployment pipeline with DevTest Labs to provision on-demand environments.
- ⇒ Scale up your load testing by provisioning multiple test agents and create pre-provisioned environments for training and demos.

Reference:

<https://docs.microsoft.com/en-us/azure/lab-services/devtest-lab-overview>

Question: 183

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes

No

Azure Advisor provides recommendations on how to improve the security of an Azure Active Directory (Azure AD) environment.

Azure Advisor provides recommendations on how to reduce the cost of running Azure virtual machines.

Azure Advisor provides recommendations on how to configure the network settings on Azure virtual machines.

Answer:

Answer Area

Statements	Yes	No
Azure Advisor provides recommendations on how to improve the security of an Azure Active Directory (Azure AD) environment.	<input type="radio"/>	<input checked="" type="radio"/>
Azure Advisor provides recommendations on how to reduce the cost of running Azure virtual machines.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Advisor provides recommendations on how to configure the network settings on Azure virtual machines.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

Azure Advisor provides you with a consistent, consolidated view of recommendations for all your Azure resources. It integrates with Azure Security Center to bring you security recommendations. You can get security recommendations from the Security tab on the Advisor dashboard. Examples of recommendations include restricting access to virtual machines by configuring Network Security Groups, enabling storage encryption, installing vulnerability assessment solutions.

However, Azure Advisor does not provide recommendations on how to improve the security of an Azure AD environment.

Box 2: Yes -

Advisor helps you optimize and reduce your overall Azure spend by identifying idle and underutilized resources. You can get cost recommendations from the Cost tab on the Advisor dashboard.

Box 3: No.

Azure Advisor does not provide recommendations on how to configure network settings on Azure virtual machines.

Reference:

<https://docs.microsoft.com/en-us/azure/advisor/advisor-security-recommendations> <https://docs.microsoft.com/en-us/azure/advisor/advisor-cost-recommendations>

Question: 184

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS --generate-ssh-keys
You need to create VM1 in Subscription1 by using the command.
Solution: From the Azure portal, launch Azure Cloud Shell and select PowerShell. Run the command in Cloud Shell.
Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The command can be run in the Azure Cloud Shell. Although this question says you select PowerShell rather than Bash, the Az commands will work in

PowerShell.

The Azure Cloud Shell is a free interactive shell. It has common Azure tools preinstalled and configured to use with your account.

To open the Cloud Shell, just select Try it from the upper right corner of a code block. You can also launch Cloud Shell in a separate browser tab by going to <https://shell.azure.com/bash>.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/quick-create-cli>

CertyIQ

Question: 185

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS --generate-ssh-keys

You need to create VM1 in Subscription1 by using the command.

Solution: From a computer that runs Windows 10, install Azure CLI. From PowerShell, sign in to Azure and then run the command.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The command can be run from PowerShell or the command prompt if you have the Azure CLI installed.

Reference:

<https://docs.microsoft.com/en-us/cli/azure/install-azure-cli-windows?view=azure-cli-latest>

Question: 186

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS

--generate-ssh-keys

You need to create VM1 in Subscription1 by using the command.

Solution: From a computer that runs Windows 10, install Azure CLI. From a command prompt, sign in to Azure and then run the command.

Does this meet the goal?

A. Yes

B. No

Answer: A**Explanation:**

The command can be run from PowerShell or the command prompt if you have the Azure CLI installed.

Reference:

<https://docs.microsoft.com/en-us/cli/azure/install-azure-cli-windows?view=azure-cli-latest>

Question: 187

CertyIQ

HOTSPOT -

Several support engineers plan to manage Azure by using the computers shown in the following table:

Name	Operating system
Computer1	Windows 10
Computer2	Ubuntu
Computer3	MacOS Mojave

You need to identify which Azure management tools can be used from each computer.

What should you identify for each computer? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Computer1:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Computer2:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Computer3:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Answer:

Answer Area

Computer1:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Computer2:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Computer3:

- The Azure CLI and the Azure portal
- The Azure portal and Azure PowerShell
- The Azure CLI and Azure PowerShell
- The Azure CLI, the Azure portal, and Azure PowerShell**

Explanation:

Previously, the Azure CLI (or x-plat CLI) was the only option for managing Azure subscriptions and resources from the command-line on Linux and macOS. Now with the open source and cross-platform release of

PowerShell, you'll be able to manage all your Azure resources from Windows, Linux and macOS using your tool of choice, either the Azure CLI or Azure PowerShell cmdlets.

The Azure portal runs in a web browser so can be used in either operating system.

Reference:

<https://buildazure.com/2016/08/18/powershell-now-open-source-and-cross-platform-linux-macos-windows/>

Question: 188

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You can access Compliance Manager
from the

- Azure Active Directory admin center
- Azure portal
- Microsoft 365 admin center
- Microsoft Service Trust Portal

Answer:

Answer Area

You can access Compliance Manager
from the

- Azure Active Directory admin center
- Azure portal
- Microsoft 365 admin center
- Microsoft Service Trust Portal

Explanation:

Microsoft 365 Admin Center.

"Compliance Manager has moved from the Service Trust Portal to its new location in the Microsoft 365 compliance center. All customer data has been moved over to the new location, so you can continue using Compliance Manager without interruption. Refer to the Compliance Manager documentation for setup information and to learn about new features. Although the classic version of Compliance Manager remains in the Service Trust Portal, all users are encouraged to use Compliance Manager in the Microsoft 365

compliance center."

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal?view=o365-worldwide>

Question: 189

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

- Azure policies provide
- Resource groups provide
- Azure Resource Manager templates provide
- Management groups provide

a common platform for deploying objects to a cloud infrastructure and for implementing consistency across the Azure environment.

Answer:

Answer Area

- Azure policies provide
- Resource groups provide
- Azure Resource Manager templates provide
- Management groups provide

a common platform for deploying objects to a cloud infrastructure and for implementing consistency across the Azure environment.

Explanation:

Azure Resource Manager templates provides a common platform for deploying objects to a cloud infrastructure and for implementing consistency across the Azure environment.

Azure policies are used to define rules for what can be deployed and how it should be deployed. Whilst this can help in ensuring consistency, Azure policies do not provide the common platform for deploying objects to a cloud infrastructure.

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

Question: 190

CertyIQ

DRAG DROP -

Match the Azure service to the correct description.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Options	Answer Area
Azure Machine Learning	
Azure IoT Hub	
Azure Bot Services	
Azure Functions	

Provides a digital online assistant that provides speech support

Uses past trainings to provide predictions that have high probability

Provides serverless computing functionalities

Processes data from millions of sensors

Answer:

Answer Options	Answer Area
Azure Machine Learning	Azure Bot Services
Azure IoT Hub	Azure Machine Learning
Azure Bot Services	Azure Functions
Azure Functions	Azure IoT Hub

Provides a digital online assistant that provides speech support

Uses past trainings to provide predictions that have high probability

Provides serverless computing functionalities

Processes data from millions of sensors

Explanation:

Box 1:

Azure Bot Services provides a digital online assistant that provides speech support.

Bots provide an experience that feels less like using a computer and more like dealing with a person - or at least an intelligent robot. They can be used to shift simple, repetitive tasks, such as taking a dinner reservation or gathering profile information, on to automated systems that may no longer require direct human intervention. Users converse with a bot using text, interactive cards, and speech. A bot interaction can be a quick question and answer, or it can be a sophisticated conversation that intelligently provides access to services.

Box 2:

Azure Machine Learning uses past trainings to provide predictions that have high probability.

Machine learning is a data science technique that allows computers to use existing data to forecast future behaviors, outcomes, and trends. By using machine learning, computers learn without being explicitly programmed.

Forecasts or predictions from machine learning can make apps and devices smarter. For example, when you shop online, machine learning helps recommend other products you might want based on what you've bought.

Box 3:

Azure Functions provides serverless computing functionalities.

Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.

Box 4:

IoT Hub (Internet of things Hub) provides data from millions of sensors.

IoT Hub is a managed service, hosted in the cloud, that acts as a central message hub for bi-directional communication between your IoT application and the devices it manages. You can use Azure IoT Hub to build IoT solutions with reliable and secure communications between millions of IoT devices and a cloud-hosted solution backend. You can connect virtually any device to IoT Hub.

Question: 191

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Solution: Run the script from a computer that runs Windows 10 and has the Azure PowerShell module installed.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

A PowerShell script is a file that contains PowerShell cmdlets and code. A PowerShell script needs to be run in PowerShell.

In this question, the computer has the Azure PowerShell module installed. Therefore, this solution does meet the goal.

Reference:

<https://docs.microsoft.com/en-us/powershell/scripting/components/ise/how-to-write-and-run-scripts-in-the-windows-powershell-ise?view=powershell-6>

Question: 192

CertyIQ

DRAG DROP -

Match the Azure services to the correct description.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

Select and Place:

Services	Answer Area	
Azure Functions		Provide operating system virtualization
Azure App Service		Provide portable environment for virtualized applications
Azure virtual machines		Used to build, deploy, and scale web apps
Azure Container Instances		Provide a platform for serverless code

Answer:

Services	Answer Area
	Azure virtual machines
	Azure Container Instances
	Azure App Service
	Azure Functions

Explanation:

Box 1:

Azure virtual machines provide operation system virtualization.

Azure Virtual Machines (VM) is one of several types of on-demand, scalable computing resources that Azure offers. Typically, you choose a VM when you need more control over the computing environment than the other choices offer.

Box 2:

Azure Container Instances provide portable environments for virtualized applications.

Containers are becoming the preferred way to package, deploy, and manage cloud applications. Azure Container Instances offers the fastest and simplest way to run a container in Azure, without having to manage any virtual machines and without having to adopt a higher-level service.

Containers offer significant startup benefits over virtual machines (VMs). Azure Container Instances can start containers in Azure in seconds, without the need to provision and manage VMs.

Box 3:

Azure App Service is used to build, deploy and scale web apps.

Azure App Service is a platform-as-a-service (PaaS) offering that lets you create web and mobile apps for any platform or device and connect to data anywhere, in the cloud or on-premises. App Service includes the web and mobile capabilities that were previously delivered separately as Azure Websites and Azure Mobile Services.

Box 4:

Azure Functions provide a platform for serverless code.

Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/overview> <https://docs.microsoft.com/en-us/azure/security/fundamentals/paas-applications-using-app-services> <https://docs.microsoft.com/en-us/azure/azure-functions/> <https://docs.microsoft.com/en-us/azure/container-instances/container-instances-overview>

Question: 193

CertyIQ

Which service provides serverless computing in Azure?

- A. Azure Virtual Machines
- B. Azure Functions
- C. Azure storage account
- D. Azure dedicated hosts

Answer: B

Explanation:

Azure Functions provide a platform for serverless code.

Azure Functions is a serverless compute service that lets you run event-triggered code without having to

explicitly provision or manage infrastructure.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-functions/>

CertyIQ

Question: 194

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Which three computers can run the script? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. a computer that runs macOS and has PowerShell Core 6.0 installed.
- B. a computer that runs Windows 10 and has the Azure PowerShell module installed.
- C. a computer that runs Linux and has the Azure PowerShell module installed.
- D. a computer that runs Linux and has the Azure CLI tools installed.
- E. a computer that runs Chrome OS and uses Azure Cloud Shell.

Answer: BCE

Explanation:

A: wrong, you need Azure Powershell Module, Powershell only isn't enough

B: correct, you have Powershell and the module to create Azure resources

C: correct, you have Powershell and the module to create Azure resources

D: wrong, with Azure CLI you don't execute Powershell script

E: correct, from a browser you can connect to Azure Portal and execute Azure Powershell cmdlet

CertyIQ

Question: 195

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS --generate-ssh-keys

You need to create VM1 in Subscription1 by using the command.

Solution: From the Azure portal, launch Azure Cloud Shell and select Bash. Run the command in Cloud Shell.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The command can be run in the Azure Cloud Shell.

The Azure Cloud Shell is a free interactive shell. It has common Azure tools preinstalled and configured to use with your account.

To open the Cloud Shell, just select Try it from the upper right corner of a code block. You can also launch Cloud Shell in a separate browser tab by going to <https://shell.azure.com/bash>.

While using the command subscription is not mentioned and some of us would look why subscription command was not used however all details mentioned in question was mentioned. For creating a virtual machine though power shall or bas, there is no requirement to put the subscription details. Name of VM and resource group are sufficient to create a vm.

References:

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/quick-create-cli>

Question: 196

CertyIQ

Your company has several business units.

Each business unit requires 20 different Azure resources for daily operation. All the business units require the same type of Azure resources.

You need to recommend a solution to automate the creation of the Azure resources.

What should you include in the recommendations?

- A. Azure Resource Manager templates
- B. virtual machine scale sets
- C. the Azure API Management service
- D. management groups

Answer: A

Explanation:

You can use Azure Resource Manager templates to automate the creation of the Azure resources. Deploying resource through templates is known as 'Infrastructure as code'.

To implement infrastructure as code for your Azure solutions, use Azure Resource Manager templates. The template is a JavaScript Object Notation (JSON) file that defines the infrastructure and configuration for your project. The template uses declarative syntax, which lets you state what you intend to deploy without having to write the sequence of programming commands to create it. In the template, you specify the resources to deploy and the properties for those resources.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/templates/overview>

Question: 197

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can use Azure Cost Management to view costs associated to management groups.	<input type="radio"/>	<input type="radio"/>
You can use Azure Cost Management to view costs associated to resource groups.	<input type="radio"/>	<input type="radio"/>
You can use Azure Cost Management to view the usage of virtual machines during the last three months.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can use Azure Cost Management to view costs associated to management groups.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
You can use Azure Cost Management to view costs associated to resource groups.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
You can use Azure Cost Management to view the usage of virtual machines during the last three months.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Explanation:

Yes : Azure Cost Management allows you to view costs associated with management groups.

Yes : Azure Cost Management allows you to view costs associated with resource groups.

Yes : Azure Cost Management allows you to view the usage of VMs over a specified period, including the last three months.

Question: 198

CertyIQ

What can you use to identify underutilized or unused Azure virtual machines?

- A. Azure Advisor
- B. Azure Cost Management + Billing
- C. Azure reservations
- D. Azure Policy

Answer: A

Explanation:

Azure Advisor helps you optimize and reduce your overall Azure spend by identifying idle and underutilized resources. You can get cost recommendations from the Cost tab on the Advisor dashboard.

Reference:

<https://docs.microsoft.com/en-us/azure/advisor/advisor-overview>

Question: 199

Answer:

Answer Area

 Overview

 Activity log

 Access control (IAM)

 Tags

 Resource visualizer

 Events

Settings

 Resource costs

 Deployments

 Security

 Policies

 Properties

Explanation:

In Exam, you will get only one option to be selected, Please choose IAM in that case:

Correct Answer: Identity Acces amnagement is the answer (IAM)

Box 1: Overview -

When you assign roles, you must specify a scope. Scope is the set of resources the access applies to. In Azure, you can specify a scope at four levels from broad to narrow: management group, subscription, resource group, and resource.

1. Sign in to the Azure portal.
2. In the Search box at the top, search for the scope you want to grant access to. For example, search for Management groups, Subscriptions, Resource groups, or a specific resource.
3. Click the specific resource for that scope.
4. The following shows an example resource group.

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes a search bar, a user profile icon, and various navigation icons. Below the header, the breadcrumb navigation shows 'Home > Resource groups > example-group'. The left sidebar has a tree view with 'example-group' selected, and a list of options: Overview, Activity log, Access control (IAM), Tags, Events, Settings (Deployments, Security, Policies, Properties, Locks), and Cost Management (Cost analysis, Cost alerts (preview), Budgets). The main content area is titled 'Overview' for the 'example-group' resource group. It displays 'Subscription (change)' information: Pay-As-You-Go, Subscription ID, Deployments (1 Succeeded), Location (East US). Below this is a 'Tags (change)' section with a link to 'Click here to add tags'. A filter bar allows filtering by 'Type' (all) and 'Location' (all). A table lists one record: 'storage001122' (Storage account, Type: Storage account, Location: East US). At the bottom, there are page navigation controls (Page 1 of 1).

Box 2: Access control (IAM)

Access control (IAM) is the page that you typically use to assign roles to grant access to Azure resources. It's also known as identity and access management

(IAM) and appears in several locations in the Azure portal.

1. Click Access control (IAM).

The following shows an example of the Access control (IAM) page for a resource group.

example-group | Access control (IAM)

Answer Area

Statements	Yes	No
You must have internet connectivity to manage cloud services.	<input type="radio"/>	<input type="radio"/>
You must install a management app to manage cloud services.	<input type="radio"/>	<input type="radio"/>
You can manage cloud services from any modern web browser.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You must have internet connectivity to manage cloud services.	<input checked="" type="radio"/>	<input type="radio"/>
You must install a management app to manage cloud services.	<input type="radio"/>	<input checked="" type="radio"/>
You can manage cloud services from any modern web browser.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

Box 2: No -

Cloud services can be managed through <https://portal.azure.com/>

In the Cloud Services area of the Azure portal, you can:

Update a service role or a deployment.

Promote a staged deployment to production.

Link resources to your cloud service so that you can see the resource dependencies and scale the resources together.

Delete a cloud service or a deployment.

Box 3: Yes -

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-services/cloud-services-how-to-manage-portal>

CertyIQ

Question: 202

DRAG DROP -

Match the Azure service to the correct definition.

Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Options

Azure Databricks

Azure Functions

Azure App Service

Azure Application Insights

Answer Area

Provides the platform for serverless code

A big data analysis service for machine learning

Detects and diagnoses anomalies in web apps

Hosts web apps

Answer:

Answer Options

Azure Databricks

Azure Functions

Azure App Service

Azure Application Insights

Answer Area

Azure Functions

Azure Databricks

Azure Application Insights

Azure App Service

Provides the platform for serverless code

A big data analysis service for machine learning

Detects and diagnoses anomalies in web apps

Hosts web apps

Explanation:

Serverless ---> Functions

big data analysis ---> Databricks

anomalies ---> Insights

Host ---> App Service

Box 1:

Azure Functions provides the platform for serverless code.

Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.

Box 2:

Azure Databricks is a big analysis service for machine learning.

Azure Databricks is an Apache Spark-based analytics platform. The platform consists of several components including 'MLib'. Mlib is a Machine Learning library consisting of common learning algorithms and utilities, including classification, regression, clustering, collaborative filtering, dimensionality reduction, as well as underlying optimization primitives.

Box 3:

Azure Application Insights detects and diagnoses anomalies in web apps.

Application Insights, a feature of Azure Monitor, is an extensible Application Performance Management (APM) service for developers and DevOps professionals.

Use it to monitor your live applications. It will automatically detect performance anomalies, and includes powerful analytics tools to help you diagnose issues and to understand what users actually do with your app.

Box 4:

Azure App Service hosts web apps.

Azure App Service is an HTTP-based service for hosting web applications, REST APIs, and mobile back ends. You can develop in your favorite language, be it

.NET, .NET Core, Java, Ruby, Node.js, PHP, or Python. Applications run and scale with ease on both Windows and Linux-based environments.

References:

<https://docs.microsoft.com/en-us/azure/azure-functions/>

<https://docs.microsoft.com/en-us/azure/app-service/overview>

Question: 203

CertyIQ

A team of developers at your company plans to deploy, and then remove, 50 customized virtual machines each week. Thirty of the virtual machines run Windows Server 2016 and 20 of the virtual machines run Ubuntu Linux. You need to recommend which Azure service will minimize the administrative effort required to deploy and remove the virtual machines. What should you recommend?

- A. Azure Reserved Virtual Machines (VM) Instances
- B. Azure virtual machine scale sets
- C. Azure DevTest Labs
- D. Microsoft Managed Desktop

Answer: C

Explanation:

DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates.

By using DevTest Labs, you can test the latest versions of your applications by doing the following tasks:

- ⇒ Quickly provision Windows and Linux environments by using reusable templates and artifacts.
- ⇒ Easily integrate your deployment pipeline with DevTest Labs to provision on-demand environments.
- ⇒ Scale up your load testing by provisioning multiple test agents and create pre-provisioned environments for training and demos.

Reference:

<https://docs.microsoft.com/en-us/azure/lab-services/devtest-lab-overview>

Question: 204

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure PowerShell modules can be installed on macOS.	<input type="radio"/>	<input type="radio"/>
Azure Cloud Shell can be accessed from a web browser on a Linux computer.	<input type="radio"/>	<input type="radio"/>
The Azure portal can only be accessed from a Windows device.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure PowerShell modules can be installed on macOS.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Cloud Shell can be accessed from a web browser on a Linux computer.	<input checked="" type="radio"/>	<input type="radio"/>
The Azure portal can only be accessed from a Windows device.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

You can install the Az PowerShell module locally on Windows, macOS, and Linux. It can also be used from a browser through Azure Cloud Shell or inside a Docker container.

Reference:

<https://docs.microsoft.com/en-us/powershell/azure/what-is-azure-powershell?view=azps-6.6.0> <https://serverfault.com/questions/323973/how-do-i-access-the-windows-azure-management-portal-from-ubuntu>

Question: 205

CertyIQ

A support engineer plans to perform several Azure management tasks by using the Azure CLI.

You install the CLI on a computer.

You need to tell the support engineer which tools to use to run the CLI.

Which two tools should you instruct the support engineer to use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Command Prompt
- B. Azure Resource Explorer
- C. Windows PowerShell
- D. Windows Defender Firewall
- E. Network and Sharing Center

Answer: AC

Explanation:

For Windows the Azure CLI is installed via an MSI, which gives you access to the CLI through the Windows Command Prompt (CMD) or PowerShell.

Reference:

<https://docs.microsoft.com/en-us/cli/azure/install-azure-cli-windows?view=azure-cli-latest>

Question: 206

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct

solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.

Solution: You use PowerShell in Azure Cloud Shell.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Azure Cloud Shell is a browser-based shell experience to manage and develop Azure resources.

Cloud Shell offers a browser-accessible, pre-configured shell experience for managing Azure resources without the overhead of installing, versioning, and maintaining a machine yourself.

Being browser-based, Azure Cloud Shell can be run on a browser from a tablet that runs the Android operating system.

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-shell/features>

Question: 207

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.

Solution: You use the PowerApps portal.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

powerapp:website

azure portal:vm

PowerApps lets you quickly build business applications with little or no code. It is not used to create Azure virtual machines. Therefore, this solution does not meet the goal.

PowerApps Portals allow organizations to create websites which can be shared with users external to their organization either anonymously or through the login provider of their choice like LinkedIn, Microsoft Account, other commercial login providers.

References:

<https://powerapps.microsoft.com/en-us/blog/introducing-powerapps-portals-powerful-low-code-websites-for-external-users/>

Question: 208

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.

Solution: You use the Azure portal.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

The Azure portal is a web-based, unified console that provides an alternative to command-line tools. With the Azure portal, you can manage your Azure subscription using a graphical user interface. You can build, manage, and monitor everything from simple web apps to complex cloud deployments. Create custom dashboards for an organized view of resources. Configure accessibility options for an optimal experience. Being web-based, the Azure portal can be run on a browser from a tablet that runs the Android operating system.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-portal/azure-portal-overview>

Question: 209

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

▼
The Microsoft 365 Compliance admin center
The Microsoft 365 Defender portal
Microsoft Defender for Cloud in the Azure portal
Microsoft Trust Center

provides in-depth information about security, privacy, compliance offerings, policies, and features across Microsoft cloud products.

Answer:

▼
The Microsoft 365 Compliance admin center
The Microsoft 365 Defender portal
Microsoft Defender for Cloud in the Azure portal
Microsoft Trust Center

provides in-depth information about security, privacy, compliance offerings, policies, and features across Microsoft cloud products.

Explanation:

Microsoft Trust Center"

The Microsoft feature that provides in-depth information about security, privacy, compliance offerings,

policies, and features across Microsoft cloud products is called the Microsoft Trust Center. The Trust Center is a centralized hub that offers comprehensive resources and documentation to help customers understand and evaluate the security and compliance capabilities of Microsoft Cloud services.

Question: 210

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

You can manage an on-premises Windows server as an Azure resource by using

Azure AD Connect.
Azure Arc.
an Azure Pipelines agent.
Azure VPN Gateway.

Answer:

You can manage an on-premises Windows server as an Azure resource by using

Azure AD Connect.
Azure Arc.
an Azure Pipelines agent.
Azure VPN Gateway.

Explanation:

Azure Arc simplifies governance and management by delivering a consistent multi-cloud and on-premises management platform.

Azure Arc provides a centralized, unified way to:

Manage your entire environment together by projecting your existing non-Azure and/or on-premises resources into Azure Resource Manager.

Manage virtual machines, Kubernetes clusters, and databases as if they are running in Azure.

Etc.

Incorrect:

* Why use Azure AD Connect?

Integrating your on-premises directories with Azure AD makes your users more productive by providing a common identity for accessing both cloud and on-premises resources. Users and organizations can take advantage of:

Users can use a single identity to access on-premises applications and cloud services such as Microsoft 365. Single tool to provide an easy deployment experience for synchronization and sign-in.

Provides the newest capabilities for your scenarios. Azure AD Connect replaces older versions of identity integration tools such as DirSync and Azure AD Sync.

* VPN Gateway sends encrypted traffic between an Azure virtual network and an on-premises location over the public Internet. You can also use VPN Gateway to send encrypted traffic between Azure virtual networks over the Microsoft network. A VPN gateway is a specific type of virtual network gateway.

* Pipeline agent is machine where your build is performed. An agent is installable software that runs one job at a time. Agent job is a set of steps which is recognized as execution boundary. Each job runs on an agent. All of the steps run together on the same agent.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-arc/overview>

Question: 211

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements

You can only manage cloud services from Windows devices.

Yes**No**

You can manage cloud services from the command line.

You can manage cloud services by using a web browser.

Answer:**Statements**

You can only manage cloud services from Windows devices.

Yes**No**

You can manage cloud services from the command line.

You can manage cloud services by using a web browser.

Explanation:

Box 1: No -

Easily manage your Azure storage accounts in the cloud, from Windows, macOS, or Linux, using Azure Storage Explorer.

Box 2: Yes -

Azure cloud services can be managed in Azure Automation by using the PowerShell cmdlets that are available in the Azure PowerShell tools.

Box 3: Yes -

>>>>>>>>>>>>>

You can only manage cloud services from windows devices - No. You can connect to your Cloud PC on any platform that has either the Microsoft Remote Desktop app or an HTML5-capable browser to access the web client. Windows devices will provide the optimal experience

You can manage cloud services from the command line >> Yes

You can manage cloud services by using a web browser >> Yes . Microsoft Azure is an example of a public cloud. With a public cloud, all hardware, software and other supporting infrastructure is owned and managed by the cloud provider. You access these services and manage your account using a web browser.

>>>>>>>>>>>>>>>

Reference:

<https://azure.microsoft.com/en-us/features/storage-explorer/>

<https://docs.microsoft.com/en-us/azure/cloud-services/automation-manage-cloud-services>

Question: 212**CertyIQ**

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

▼	is an Apache Spark-based analytics service.
Azure Databricks	
Azure Data Factory	
Azure DevOps	
Azure Synapse Analytics	

Answer:

Answer Area

▼	is an Apache Spark-based analytics service.
Azure Databricks	
Azure Data Factory	
Azure DevOps	
Azure Synapse Analytics	

Explanation:

Azure Databricks is an Apache Spark-based analytics platform. The platform consists of several components including 'MLib'. Mlib is a Machine Learning library consisting of common learning algorithms and utilities, including classification, regression, clustering, collaborative filtering, dimensionality reduction, as well as underlying optimization primitives.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-databricks/what-is-azure-databricks#apache-spark-based-analytics-platform>

Question: 213**CertyIQ**

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Monitor can monitor the performance of on-premises computers.	<input type="radio"/>	<input type="radio"/>
Azure Monitor can send alerts to Azure Active Directory security groups.	<input type="radio"/>	<input type="radio"/>
Azure Monitor can trigger alerts based on data in an Azure Log Analytics workspace.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Monitor can monitor the performance of on-premises computers.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Monitor can send alerts to Azure Active Directory security groups.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Monitor can trigger alerts based on data in an Azure Log Analytics workspace.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

Azure Monitor maximizes the availability and performance of your applications and services by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments.

Box 2: Yes -

Alerts in Azure Monitor proactively notify you of critical conditions and potentially attempt to take corrective action.

Box 3: Yes -

Azure Monitor uses Target Resource, which is the scope and signals available for alerting. A target can be any Azure resource. Example targets: a virtual machine, a storage account, a virtual machine scale set, a Log Analytics workspace, or an Application Insights resource.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/overview> <https://docs.microsoft.com/en-us/azure/azur-e-monitor/platform/alerts-overview>

Question: 214

Which Azure service provides a set of version control tools to manage code?

- A. Azure Repos
- B. Azure DevTest Labs
- C. Azure Storage
- D. Azure Cosmos DB

Answer: A**Explanation:**

A. Azure Repos.

Azure Repos is a service within Azure DevOps that provides a set of version control tools to manage code. It supports both Git repositories and Team Foundation Version Control (TFVC), allowing teams to collaborate on code development efficiently. The other options listed (Azure DevTest Labs, Azure Storage, and Azure Cosmos DB) are not primarily focused on version control or code management.

Azure Repos is a set of version control tools that you can use to manage your code.

Azure repo is a part of Azure DevOps

Incorrect Answers:

B: Azure DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates. These have all the necessary tools and software that you can use to create environments.

D: Azure Cosmos DB is Microsoft's globally distributed, multi-model database service.

References:

<https://docs.microsoft.com/en-us/azure/devops/repos/get-started/what-is-repos?view=azure-devops>

Question: 215

HOTSPOT -

You need to manage Azure by using Azure Cloud Shell.

Which Azure portal icon should you select? To answer, select the appropriate icon in the answer area.

Hot Area:

Answer Area**Answer:**

Answer Area

A screenshot of the Microsoft Azure portal. At the top, there's a navigation bar with icons for Home, RSS, Print, Page, Safety, Tools, Help, and Notifications. Below the bar, the 'Microsoft Azure' logo is on the left, followed by a search bar containing 'Search resources, services, and docs'. To the right of the search bar are several icons: a green square with a white arrow pointing right, a gear icon, a question mark icon, and a smiley face icon. A blue header bar below the search bar says 'Dashboard' with a dropdown arrow, and includes icons for Create a resource, a plus sign, up and down arrows, edit, refresh, and delete.

Explanation:

Select the button on top right side which is similar to ">-" signed.

You can access Azure Cloud Shell in the Azure portal by clicking the icon.

Azure Cloud Shell is an interactive, authenticated, browser-accessible shell for managing Azure resources. It provides the flexibility of choosing the shell experience that best suits the way you work, either Bash or PowerShell.

Cloud Shell enables access to a browser-based command-line experience built with Azure management tasks in mind.

References:

<https://docs.microsoft.com/en-us/azure/cloud-shell/overview?view=azure-cli-latest>

CertyIQ

Question: 216

You have a virtual machine named VM1 that runs Windows Server 2016. VM1 is in the East US Azure region. Which Azure service should you use from the Azure portal to view service failure notifications that can affect the availability of VM1?

- A. Azure Service Fabric
- B. Azure Monitor
- C. Azure virtual machines
- D. Azure Advisor

Answer: B

Explanation:

Azure Monitor maximizes the availability and performance of your applications by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments. It helps you understand how your applications are performing and proactively identifies issues affecting them and the resources they depend on.

Service health notifications are published by the Azure infrastructure into the Azure activity log. The notifications contain information about the resources under your subscription.

View your service health notifications in the Azure portal

In the Azure portal, select Monitor.

Azure Monitor brings together all your monitoring settings and data into one consolidated view. It first opens to the Activity log section.

Select Alerts.

Select +Add activity log alert, and set up an alert to ensure you are notified for future service notifications

Question: 217

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your Azure environment contains multiple Azure virtual machines.

You need to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

Solution: You modify an Azure Traffic Manager profile.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Azure Traffic Manager is a DNS-based load balancing solution. It is not used to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

To ensure that a virtual machine named VM1 is accessible from the Internet over HTTP, you need to modify a network security group or Azure Firewall.

In this question, we need to add a rule to a network security group or Azure Firewall to allow the connection to the virtual machine on port 80 (HTTP).

Reference:

<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-overview>

Question: 218

CertyIQ

Your company plans to deploy several web servers and several database servers to Azure.

You need to recommend an Azure solution to limit the types of connections from the web servers to the database servers.

What should you include in the recommendation?

- A. network security groups (NSGs)
- B. Azure Service Bus
- C. a local network gateway
- D. a route filter

Answer: A

Explanation:

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network.

You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

CertyIQ

Question: 219

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

From

- Azure Access Control IAM
- Azure Event Hubs
- Azure Activity Log
- Azure Service Health

you can view which user turned off a specific virtual machine during the last 14 days.

Answer:

Answer Area

From

- Azure Access Control IAM
- Azure Event Hubs
- Azure Activity Log
- Azure Service Health

you can view which user turned off a specific virtual machine during the last 14 days.

Explanation:

You would use the Azure Activity Log, not Access Control to view which user turned off a specific virtual machine during the last 14 days.

Activity logs are kept for 90 days. You can query for any range of dates, as long as the starting date isn't more than 90 days in the past.

In this question, we would create a filter to display shutdown operations on the virtual machine in the last 14 days.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-audit>

CertyIQ

Question: 220

Which service provides network traffic filtering across multiple Azure subscriptions and virtual networks?

- A. Azure Firewall
- B. an application security group
- C. Azure DDoS protection
- D. a network security group (NSG)

Answer: A**Explanation:**

You can restrict traffic to multiple virtual networks in multiple subscriptions with a single Azure firewall. Azure Firewall is a managed, cloud-based network security service that protects your Azure Virtual Network resources. It's a fully stateful firewall as a service with built-in high availability and unrestricted cloud scalability.

You can centrally create, enforce, and log application and network connectivity policies across subscriptions and virtual networks. Azure Firewall uses a static public IP address for your virtual network resources allowing outside firewalls to identify traffic originating from your virtual network.

Reference:

<https://docs.microsoft.com/en-us/azure/firewall/overview>

CertyIQ**Question: 221**

Which Azure service should you use to store certificates?

- A. Azure Security Center
- B. an Azure Storage account
- C. Azure Key Vault
- D. Azure Information Protection

Answer: C**Explanation:**

Certificate Management - Azure Key Vault is also a service that lets you easily provision, manage, and deploy public and private Secure Sockets Layer/Transport Layer Security (SSL/TLS) certificates for use with Azure and your internal connected resources

Azure Key Vault is a secure store for storage various types of sensitive information including passwords and certificates.

Azure Key Vault can be used to Securely store and tightly control access to tokens, passwords, certificates, API keys, and other secrets.

Secrets and keys are safeguarded by Azure, using industry-standard algorithms, key lengths, and hardware security modules (HSMs). The HSMs used are

Federal Information Processing Standards (FIPS) 140-2 Level 2 validated.

Access to a key vault requires proper authentication and authorization before a caller (user or application) can get access. Authentication establishes the identity of the caller, while authorization determines the operations that they are allowed to perform.

References:

<https://docs.microsoft.com/en-us/azure/key-vault/key-vault-overview>

CertyIQ**Question: 222**

Which Azure service can you use as a security information and event management (SIEM) solution?

- A. Azure Analysis Services
- B. Azure Sentinel
- C. Azure Information Protection
- D. Azure Cognitive Services

Answer: B

Explanation:

Microsoft Azure Sentinel is a scalable, cloud-native, security information event management (SIEM) and security orchestration automated response (SOAR) solution.

Reference:

<https://azure.microsoft.com/en-in/services/azure-sentinel/>

Question: 223

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Sentinel stores collected events in an Azure Storage account.	<input type="radio"/>	<input type="radio"/>
Azure Sentinel can remediate incidents automatically.	<input type="radio"/>	<input type="radio"/>
Azure Sentinel can collect Windows Defender Firewall logs from Azure virtual machines.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Sentinel stores collected events in an Azure Storage account.	<input type="radio"/>	<input checked="" type="radio"/>
Azure Sentinel can remediate incidents automatically.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Sentinel can collect Windows Defender Firewall logs from Azure virtual machines.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No. Azure Sentinel stores collected events in Azure Log Analytics workspaces, not in an Azure Storage account.

Yes. Azure Sentinel can remediate incidents automatically using Playbooks, which are collections of procedures that can be run from Azure Sentinel.

Yes. Azure Sentinel can collect Windows Defender firewall logs from Azure VMs.

Question: 224

CertyIQ

DRAG DROP -

Match the Azure Services service to the correct descriptions.

Instructions: To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Services

Answer Area

Azure Active Directory
(Azure AD)

Analyze security log files from Azure virtual machines

Azure Key Vault

Display the secure score for an Azure subscription

Azure Lighthouse

Store passwords for use by Azure Function applications.

Azure Security Center

Azure Sentinel

Answer:

1.Azure Sentinel, 2.Azure Security Center, 3.Azure Key Vault

Explanation:

Box 1: Azure Sentinel -

Box 2: Azure Security Center -

Box 3: Azure Key Vault -

⇒ Azure Active Directory (Azure AD)

Azure AD is an identity and access management service, which helps your employees sign in and access resources

⇒ Azure Lighthouse

Azure Lighthouse is used for cross- and multi-tenant management.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/overview>

<https://docs.microsoft.com/en-us/azure/security-center/secure-score-security-controls>

Question: 225

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes No

Azure Firewall will encrypt all the network traffic sent from Azure to the Internet.

A network security group (NSG) will encrypt all the network traffic sent from Azure to the Internet.

Azure virtual machines that run Windows Server 2016 can encrypt network traffic sent to the Internet.

Answer:

Answer Area

Statements

Yes No

Azure Firewall will encrypt all the network traffic sent from Azure to the Internet.

A network security group (NSG) will encrypt all the network traffic sent from Azure to the Internet.

Azure virtual machines that run Windows Server 2016 can encrypt network traffic sent to the Internet.

Explanation:

Box 1: No -

Azure firewall does not encrypt network traffic. It is used to block or allow traffic based on source/destination

IP address, source/destination ports and protocol.

Box 2: No -

A network security group does not encrypt network traffic. It works in a similar way to a firewall in that it is used to block or allow traffic based on source/ destination IP address, source/destination ports and protocol.

Box 3: No -

The question is rather vague as it would depend on the configuration of the host on the Internet. Windows Server does come with a VPN client and it also supports other encryption methods such IPSec encryption or SSL/TLS so it could encrypt the traffic if the Internet host was configured to require or accept the encryption. However, the VM could not encrypt the traffic to an Internet host that is not configured to require the encryption.

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-security-data-encryption-best-practices#protect-data-in-transit>

Question: 226

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Security Center can monitor Azure resources and on-premises resources.	<input type="radio"/>	<input type="radio"/>
All Azure Security Center features are free.	<input type="radio"/>	<input type="radio"/>
From Azure Security Center, you can download a Regulatory Compliance report.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Security Center can monitor Azure resources and on-premises resources.	<input checked="" type="radio"/>	<input type="radio"/>
All Azure Security Center features are free.	<input type="radio"/>	<input checked="" type="radio"/>
From Azure Security Center, you can download a Regulatory Compliance report.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

Azure Security Center is a unified infrastructure security management system that strengthens the security posture of your data centers, and provides advanced threat protection across your hybrid workloads in the cloud - whether they're in Azure or not - as well as on premises.

Box 2: No -

Only two features: Continuous assessment and security recommendations, and Azure secure score, are free.

Box 3: Yes -

The advanced monitoring capabilities in Security Center also let you track and manage compliance and governance over time. The overall compliance provides you with a measure of how much your subscriptions are compliant with policies associated with your workload.

Note:- Azure Security Center and Azure Defender are now called Microsoft Defender for Cloud.

References:

<https://docs.microsoft.com/en-us/azure/security-center/security-center-intro>

Question: 227

CertyIQ

DRAG DROP -

You need to complete the defense-in-depth strategy used in a datacenter.

What should you do? To answer, drag the appropriate layers to the correct positions in the model. Each layer may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Layers

Perimeter
Application
Physical Security

Answer Area

Answer:

Layers

Perimeter
Application
Physical Security

Answer Area

Explanation:

Physical Security (Top)

Identity & Access

Perimeter

Network

Compute

Application

Data (Bottom)

Defence in depth layers (from bottom to top):

⇒ Data

- In almost all cases attackers are after data.
- Data can be in database, stored on disk inside VMs, on a SaaS application such as Office 365 or in cloud storage.
- Those storing and controlling access to data to ensures that it's properly secured
- Often regulatory requirements dictates controls & processes
- to ensure confidentiality, integrity, and availability.

⇒ Application

- Ensure applications are secure and free of vulnerabilities.
- Store sensitive application secrets in a secure storage medium.
- Make security a design requirement for all application development.
- Integrate security into the application development life cycle.

⇒ Compute

- Secure access to virtual machines.
- Implement endpoint protection and keep systems patched and current.
- Malware, unpatched systems, and improperly secured systems open your environment to attacks.

⇒ Networking

- Limit communication between resources.
- Deny by default.
- Allow only what is required
- Restrict inbound internet access and limit outbound, where appropriate.
- Implement secure connectivity to on-premises networks.

⇒ Perimeter

- Use distributed denial of service (DDoS) protection to filter large-scale attacks before they can cause a denial of service for end users.
- Use perimeter firewalls to identify and alert on malicious attacks against your network.

⇒ Identity and access

- Control access to infrastructure and change control.
- Access granted is only what is needed
- Use single sign-on and multi-factor authentication.

- Audit events and changes.
- ⇒ Physical security
- Building security & controlling access to computing hardware.
- First line of defense.

Reference:

<https://github.com/undergroundwires/Azure-in-bullet-points/blob/master/AZ-900%20Microsoft%20Azure%20Fundamentals/4.2.%20Defence%20in%20Depth.md>

Question: 228

CertyIQ

You have an Azure virtual machine named VM1.
You plan to encrypt VM1 by using Azure Disk Encryption.
Which Azure resource must you create first?

- A. an Azure Storage account
- B. an Azure Key Vault
- C. an Azure Information Protection policy
- D. an Encryption key

Answer: B

Explanation:

Azure Disk Encryption requires an Azure Key Vault to control and manage disk encryption keys and secrets.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/disk-encryption-overview>

Question: 229

CertyIQ

Which resources can be used as a source for a Network security group inbound security rule?

- A. Service Tags only
- B. IP Addresses, Service tags and Application security groups
- C. Application security groups only
- D. IP Addresses only

Answer: B

Explanation:

Source or destination:

Any, or an individual IP address, classless inter-domain routing (CIDR) block (10.0.0.0/24, for example), service tag, or application security group.

Network security groups are processed after Azure translates a public IP address to a private IP address for inbound traffic, and before Azure translates a private IP address to a public IP address for outbound traffic. Specifying a range, a service tag, or application security group, enables you to create fewer security rules.

<https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview#security-rules>

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview>

Question: 230

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Azure Sentinel uses playbooks to

- ▼
- automatically respond to threats.
- collect data from Azure services.
- specify how long data is retained.
- store passwords and certificates.

Answer:

Answer Area

Azure Sentinel uses playbooks to

- ▼
- automatically respond to threats.
- collect data from Azure services.
- specify how long data is retained.
- store passwords and certificates.

Explanation:

Playbooks are collections of procedures that can be run from Azure Sentinel in response to an alert or incident. A playbook can help automate and orchestrate your response, and can be set to run automatically when specific alerts or incidents are generated, by being attached to an analytics rule or an automation rule, respectively. It can also be run manually on-demand.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-respond-threats-playbook>

Question: 231

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Application rules
Network Address Translation (NAT) rules
Network rules
Service tags

in Azure Firewall enables users on the internet to access a server on a virtual network.

Answer:

Answer Area

Application rules
Network Address Translation (NAT) rules
Network rules
Service tags

in Azure Firewall enables users on the internet to access a server on a virtual network.

Explanation:

If you configure network rules and application rules, then network rules are applied in priority order before application rules.

NAT rules are applied in priority before network rules.

<https://docs.microsoft.com/en-us/azure/firewall/rule-processing>

Reference:

<https://docs.microsoft.com/en-us/azure/firewall/tutorial-firewall-dnat-policy>

Question: 232

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Azure distributed denial of service (DDoS) protection is an example of protection that is implemented at the

application layer.
compute layer.
networking layer.
perimeter layer.

Answer:

Answer Area

Azure distributed denial of service (DDoS) protection is an example of protection that is implemented at the

- application layer.
- compute layer.
- networking layer.
- perimeter layer.

Explanation:

"The perimeter layer uses distributed denial of service (DDoS) protection to filter large-scale attacks before they can cause a denial of service for users."

<https://docs.microsoft.com/en-us/learn/modules/secure-network-connectivity-azure/2-what-is-defense-in-depth>

Question: 233

CertyIQ

You have an Azure Sentinel workspace.

You need to automate responses to threats detected by Azure Sentinel.

What should you use?

- A. adaptive network hardening in Azure Security Center
- B. Azure Service Health
- C. Azure Monitor workbooks
- D. adaptive application controls in Azure Security Center

Answer: C

Explanation:

Once you have connected your data sources to Microsoft Sentinel, you can visualize and monitor the data using the Microsoft Sentinel adoption of Azure Monitor Workbooks, which provides versatility in creating custom dashboards. While the Workbooks are displayed differently in Microsoft Sentinel, it may be useful for you to see how to create interactive reports with Azure Monitor Workbooks. Microsoft Sentinel allows you to create custom workbooks across your data, and also comes with built-in workbook templates to allow you to quickly gain insights across your data as soon as you connect a data source.

<https://docs.microsoft.com/en-us/azure/sentinel/monitor-your-data>

Question: 234

CertyIQ

DRAG DROP -

Match the Azure services benefits to the correct descriptions.

Instructions: To answer, drag the appropriate benefit from the column on the left to its description on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Services

Answer Area

Azure Active Directory
(Azure AD)

Azure Key Vault

Azure Lighthouse

Microsoft Defender for
Cloud

Microsoft Sentinel

Provide security information event management (SIEM) functionality

Display the secure score for an Azure subscription

Store passwords for use by Azure Function applications

Answer:

Services

Answer Area

Azure Active Directory
(Azure AD)

Azure Key Vault

Azure Lighthouse

Microsoft Defender for
Cloud

Microsoft Sentinel

Microsoft Sentinel

Provide security information event management (SIEM) functionality

Display the secure score for an Azure subscription

Store passwords for use by Azure Function applications

Explanation:

Box 1: Microsoft Sentinel -

Microsoft Sentinel is a scalable, cloud-native, security information and event management (SIEM) and security orchestration, automation, and response (SOAR) solution. Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for attack detection, threat visibility, proactive hunting, and threat response.

Box 2: Microsoft Defender for Cloud

You can find your overall secure score, as well as your score per subscription, through the Azure portal. Defender for Cloud displays your secure score prominently in the portal.

Box 3: Azure Key Vault -

A favored approach to store the credentials or keys in the Azure Key Vault as secrets and reference the secrets as environment variables in our Azure functions apps.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/overview>

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/secure-score-access-and-track> <https://levelup.gitconnected.com/a-secure-way-to-use-credentials-and-secrets-in-azure-functions-7ec91813c807>

Question: 235

CertyIQ

Which Azure service can you use as a security information and event management (SIEM) solution?

- A. Azure Analysis Services
- B. Microsoft Sentinel
- C. Azure Information Protection
- D. Azure Cognitive Services

Answer: B

Explanation:

Microsoft Sentinel is a scalable, cloud-native, security information and event management (SIEM) and security orchestration, automation, and response (SOAR) solution. Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for attack detection, threat visibility, proactive hunting, and threat response.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/overview>

Question: 236

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

An Azure Policy initiative definition is a

collection of policy definitions.
collection of Azure Policy definition assignments.
group of Azure Blueprints definitions.
group of role-based access control (RBAC) role assignments.

Answer:

Answer Area

An Azure Policy initiative definition is a

collection of policy definitions.
collection of Azure Policy definition assignments.
group of Azure Blueprints definitions.
group of role-based access control (RBAC) role assignments.

Explanation:

Box: collection of policy definitions

An Azure Policy initiative is a collection of Azure Policy definitions, or rules, that are grouped together towards a specific goal or purpose. Azure initiatives simplify management of your policies by grouping a set of policies together, logically, as a single item.

"collect of policy definitions" is the answer.

<https://learn.microsoft.com/en-us/azure/governance/policy/overview#initiative-definition>

An initiative definition is a collection of policy definitions that are tailored toward achieving a singular overarching goal. Initiative definitions simplify managing and assigning policy definitions. They simplify by grouping a set of policies as one single item. For example, you could create an initiative titled Enable Monitoring in Microsoft Defender for Cloud, with a goal to monitor all the available security recommendations in your Microsoft Defender for Cloud instance.

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/security-policy-concept>

CertyIQ

Question: 237

You have an Azure subscription.
You need to review your secure score.
What should you use?

- A. Azure Monitor
- B. Azure Advisor
- C. Help + support
- D. Microsoft Defender for Cloud

Answer: D

Explanation:

The central feature in Defender for Cloud that enables you to achieve those goals is secure score.

Microsoft Defender for Cloud has two main goals:

- to help you understand your current security situation
- to help you efficiently and effectively improve your security

The central feature in Defender for Cloud that enables you to achieve those goals is the secure score.

Defender for Cloud continually assesses your cross-cloud resources for security issues. It then aggregates all the findings into a single score so that you can tell, at a glance, your current security situation: the higher the score, the lower the identified risk level.

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/secure-score-security-controls>

Question: 238

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

You can enable just in time (JIT) VM access by using

Azure Bastion
Azure Firewall
Azure Front Door
Microsoft Defender for Cloud

Answer:

Answer Area

You can enable just in time (JIT) VM access by using

Azure Bastion
Azure Firewall
Azure Front Door
Microsoft Defender for Cloud

Explanation:

Box: Microsoft Defender for Cloud

Lock down inbound traffic to your Azure Virtual Machines with Microsoft Defender for Cloud's just-in-time (JIT) virtual machine (VM) access feature. This reduces exposure to attacks while providing easy access when you need to connect to a VM.

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage>

Question: 239

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

You can view your company's regulatory compliance report from

Azure Advisor
Azure Analysis Services
Azure Monitor
Microsoft Defender for Cloud

Answer:

Answer Area

You can view your company's regulatory compliance report from

Azure Advisor
Azure Analysis Services
Azure Monitor
Microsoft Defender for Cloud

Explanation:

Box: Microsoft Defender for Cloud

Microsoft Defender for Cloud helps streamline the process for meeting regulatory compliance requirements, using the regulatory compliance dashboard.

You can download PDF/CSV reports as well as certification reports of your compliance status.

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/regulatory-compliance-dashboard>

Question: 240

CertyIQ

You need to collect and automatically analyze security events from Azure Active Directory (Azure AD). What should you use?

- A. Microsoft Sentinel
- B. Azure Synapse Analytics
- C. Azure AD Connect
- D. Azure Key Vault

Answer: A

Explanation:

Microsoft Sentinel is a scalable, cloud-native, security information and event management (SIEM) and security orchestration, automation, and response (SOAR) solution.

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for attack detection, threat visibility, proactive hunting, and threat response.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/overview>

Question: 241

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

▼
Application security groups in Azure
Azure Active Directory (Azure AD)
Azure Key Vault
Microsoft Defender for Cloud

enables users to authenticate to multiple applications by using single sign-on (SSO).

Answer:

Answer Area

▼
Application security groups in Azure
Azure Active Directory (Azure AD)
Azure Key Vault
Microsoft Defender for Cloud

enables users to authenticate to multiple applications by using single sign-on (SSO).

Explanation:

Box: Azure Active Directory (Azure AD)

You can enable single sign-on for an enterprise application through Azure Active Directory (Azure AD).

Incorrect:

Application security groups enable you to configure network security as a natural extension of an application's structure, allowing you to group virtual machines and define network security policies based on those groups.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/add-application-portal-setup-sso>

Question: 242

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A network security group (NSG) will block all network traffic by default.	<input type="radio"/>	<input type="radio"/>
Application security groups can be specified as part of network security group (NSG) rules.	<input type="radio"/>	<input type="radio"/>
Network security groups (NSGs) always include inbound security rules and outbound security rules.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A network security group (NSG) will block all network traffic by default.	<input type="radio"/>	<input checked="" type="radio"/>
Application security groups can be specified as part of network security group (NSG) rules.	<input checked="" type="radio"/>	<input type="radio"/>
Network security groups (NSGs) always include inbound security rules and outbound security rules.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

Azure creates the default rules in each network security group that you create. These rules allow some traffic.

Box 2: Yes -

A network security group contains zero, or as many rules as desired. These rules can refer to application security groups.

Box 3: Yes -

Azure creates the Inbound and OutBound default rules in each network security group that you create.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview>

Question: 243

CertyIQ

DRAG DROP -

Match the term to the appropriate description.

To answer, drag the appropriate term from the column on the left to its description on the right. Each term may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Terms

Answer Area

authorization

The ability to use the same credentials to access multiple resources and applications from different providers.

multi-factor authentication (MFA)

The process of identifying the access level of a user or service.

single sign-on (SSO)

Requires several elements to identify a user or a service.

Answer:

Terms

Answer Area

authorization

single sign-on (SSO)

The ability to use the same credentials to access multiple resources and applications from different providers.

multi-factor authentication (MFA)

authorization

The process of identifying the access level of a user or service.

single sign-on (SSO)

multi-factor authentication (MFA)

Requires several elements to identify a user or a service.

Explanation:

Single sign-on (SSO) >> The ability to use the same credentials to access multiple resources and applications from different providers

Authentication >> The process of identifying the access level of a user or service

Multi-factor authentication(MFA) - Requires several elements to identify a user or a service

Question: 244

CertyIQ

Your company plans to automate the deployment of servers to Azure.

Your manager is concerned that you may expose administrative credentials during the deployment.

You need to recommend an Azure solution that encrypts the administrative credentials during the deployment.

What should you include in the recommendation?

- A. Azure Key Vault
- B. Azure Information Protection
- C. Microsoft Defender for Cloud
- D. Azure Multi-Factor Authentication (MFA)

Answer: A

Explanation:

Azure Key Vault protects cryptographic keys, certificates (and the private keys associated with the certificates), and secrets (such as connection strings and passwords) in the cloud.

Reference:

<https://docs.microsoft.com/en-us/azure/key-vault/general/security-features>

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

After you create a virtual machine, you need to modify the
to allow connections to TCP port 8080 on the virtual machine

▼
network security group (NSG)
virtual network gateway
virtual network
route table

Answer:

Answer Area

After you create a virtual machine, you need to modify the
to allow connections to TCP port 8080 on the virtual machine

▼
network security group (NSG)
virtual network gateway
virtual network
route table

Explanation:

Box: network Security group (NSG)

You can use an Azure network security group to filter network traffic to and from Azure resources in an Azure virtual network. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources. For each rule, you can specify source and destination, port, and protocol.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview>

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Azure distributed denial of service (DDoS) protection is an example of protection that is implemented at the

application layer
compute layer
networking layer
perimeter layer

Answer:

Answer Area

Azure distributed denial of service (DDoS) protection is an example of protection that is implemented at the

application layer
compute layer
networking layer
perimeter layer

Explanation:

Perimeter layer.

<https://learn.microsoft.com/en-us/training/modules/secure-network-connectivity-azure/2-what-is-defense-in-depth>

Question: 247

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Microsoft Sentinel uses playbooks to

- ▼ automatically respond to threats
- visualize data collected by connectors
- specify how long data is retained
- store passwords and certificates

Answer:

Answer Area

Microsoft Sentinel uses playbooks to

- ▼ automatically respond to threats
- visualize data collected by connectors
- specify how long data is retained
- store passwords and certificates

Explanation:

Box: automatically respond to threats

Playbooks are collections of procedures that can be run from Microsoft Sentinel in response to an alert or incident. A playbook can help automate and orchestrate your response, and can be set to run automatically when specific alerts or incidents are generated, by being attached to an analytics rule or an automation rule, respectively.

Note: Automation rules help you triage incidents in Microsoft Sentinel. You can use them to automatically assign incidents to the right personnel, close noisy incidents or known false positives, change their severity, and add tags. They are also the mechanism by which you can run playbooks in response to incidents.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-respond-threats-playbook>

Question: 248

CertyIQ

You need to configure an Azure solution that meets the following requirements:

- ⇒ Secures websites from attacks
 - ⇒ Generates reports that contain details of attempted attacks
- What should you include in the solution?

- A. Azure Firewall
- B. a network security group (NSG)
- C. Azure Information Protection
- D. DDoS protection

Answer: D

Explanation:

Attack is the Key word for DDOS.

Rules is keyword for Firewall.

Allow/Deny is the Keyword for NSG

DDoS is a type of attack that tries to exhaust application resources. The goal is to affect the application's availability and its ability to handle legitimate requests.

DDoS attacks can be targeted at any endpoint that is publicly reachable through the internet.

Azure has two DDoS service offerings that provide protection from network attacks: DDoS Protection Basic and DDoS Protection Standard.

DDoS Basic protection is integrated into the Azure platform by default and at no extra cost.

You have the option of paying for DDoS Standard. It has several advantages over the basic service, including logging, alerting, and telemetry. DDoS Standard can generate reports that contain details of attempted attacks as required in this question.

Reference:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/ddos-best-practices>

CertyIQ

Question: 249

HOTSPOT -

You plan to implement several security services for an Azure environment. You need to identify which Azure services must be used to meet the following security requirements:

- ⇒ Monitor threats by using sensors
- ⇒ Enforce Azure Multi-Factor Authentication (MFA) based on a condition

Which Azure service should you identify for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Monitor threats by using sensors:

Azure Monitor
Azure Security Center
Azure Active Directory (Azure AD) Identity Protection
Azure Advanced Threat Protection (ATP)

Enforce Azure MFA based on a condition:

Azure Monitor
Azure Security Center
Azure Active Directory (Azure AD) Identity Protection
Azure Advanced Threat Protection (ATP)

Answer:

Answer Area

Monitor threats by using sensors:

Azure Monitor
Azure Security Center
Azure Active Directory (Azure AD) Identity Protection
Azure Advanced Threat Protection (ATP)

Enforce Azure MFA based on a condition:

Azure Monitor
Azure Security Center
Azure Active Directory (Azure AD) Identity Protection
Azure Advanced Threat Protection (ATP)

Explanation:

Box 1:

To monitor threats by using sensors, you would use Azure Advanced Threat Protection (ATP).

Azure Advanced Threat Protection (ATP) is a cloud-based security solution that leverages your on-premises Active Directory signals to identify, detect, and investigate advanced threats, compromised identities, and malicious insider actions directed at your organization.

Sensors are software packages you install on your servers to upload information to Azure ATP.

Box 2:

To enforce MFA based on a condition, you would use Azure Active Directory Identity Protection.

Azure AD Identity Protection helps you manage the roll-out of Azure Multi-Factor Authentication (MFA) registration by configuring a Conditional Access policy to require MFA registration no matter what modern authentication app you are signing in to.

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/what-is-atp> <https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-identity-protection-configure-mfa-policy>

Question: 250

CertyIQ

Your Azure environment contains multiple Azure virtual machines.

You need to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

What are two possible solutions? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Modify an Azure Traffic Manager profile
- B. Modify a network security group (NSG)
- C. Modify a DDoS protection plan
- D. Modify an Azure firewall

Answer: BD

Explanation:

Question saying there should be 2 answer, not just one as given in the solution.

B (NSG) and D (Firewall)

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network.

You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as

virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

In this question, we need to add a rule to the network security group to allow the connection to the virtual machine on port 80 (HTTP).

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

Question: 251

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You can enable just in time (JIT) VM access by using

Azure Bastion
Azure Firewall
Azure Front Door
Azure Security Center

Answer:

Answer Area

You can enable just in time (JIT) VM access by using

Azure Bastion
Azure Firewall
Azure Front Door
Azure Security Center

Explanation:

"Azure Security Center" is the answer, and it has been renamed to **Microsoft Defender for Cloud**.

<https://learn.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage>

You can use Microsoft Defender for Cloud's just-in-time (JIT) access to protect your Azure virtual machines (VMs) from unauthorized network access. Many times firewalls contain allow rules that leave your VMs vulnerable to attack. JIT lets you allow access to your VMs only when the access is needed, on the ports needed, and for the period of time needed.

Reference:

<https://docs.microsoft.com/en-us/azure/security-center/security-center-just-in-time?tabs=jit-config-asc%2Cjit-request-asc>

Question: 252

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can associate a network security group (NSG) to a virtual network subnet.	<input type="radio"/>	<input type="radio"/>
You can associate a network security group (NSG) to a virtual network.	<input type="radio"/>	<input type="radio"/>
You can associate a network security group (NSG) to a network interface.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can associate a network security group (NSG) to a virtual network subnet.	<input checked="" type="radio"/>	<input type="radio"/>
You can associate a network security group (NSG) to a virtual network.	<input type="radio"/>	<input checked="" type="radio"/>
You can associate a network security group (NSG) to a network interface.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1 - Yes

Box 2 - No

"You can associate zero, or one, network security group to each virtual network subnet and network interface in a virtual machine. The same network security group can be associated to as many subnets and network interfaces as you choose."

References: <https://docs.microsoft.com/en-us/azure/virtual-network/network-security-group-how-it-works>

Note: It clearly says it must be either a subnet (not a virtual network) or a NIC.

Box 3 - Yes

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/network-security-group-how-it-works>

Question: 253

CertyIQ

You have an Azure environment that contains 10 virtual networks and 100 virtual machines.

You need to limit the amount of inbound traffic to all the Azure virtual networks.

What should you create?

- A. one application security group (ASG)
- B. 10 virtual network gateways
- C. 10 Azure ExpressRoute circuits
- D. one Azure firewall

Answer: D

Explanation:

You can restrict traffic to multiple virtual networks with a single Azure firewall.

Azure Firewall is a managed, cloud-based network security service that protects your Azure Virtual Network resources. It's a fully stateful firewall as a service with built-in high availability and unrestricted cloud scalability.

You can centrally create, enforce, and log application and network connectivity policies across subscriptions and virtual networks. Azure Firewall uses a static public IP address for your virtual network resources allowing outside firewalls to identify traffic originating from your virtual network.

Reference:

<https://docs.microsoft.com/en-us/azure/firewall/overview>

Question: 254

CertyIQ

This question requires that you evaluate the underlined text to determine if it is correct.

Azure Key Vault is used to store secrets for Azure Active Directory (Azure AD) user accounts.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Azure Active Directory (Azure AD) administrative accounts
- C. Personally Identifiable Information (PII)
- D. server applications

Answer: D

Explanation:

<https://learn.microsoft.com/en-us/azure/key-vault/general/overview#why-use-azure-key-vault>

Centralizing storage of application secrets in Azure Key Vault allows you to control their distribution. Key Vault greatly reduces the chances that secrets may be accidentally leaked. When application developers use Key Vault, they no longer need to store security information in their application. Not having to store security information in applications eliminates the need to make this information part of the code. For example, an application may need to connect to a database. Instead of storing the connection string in the app's code, you can store it securely in Key Vault.

Your applications can securely access the information they need by using URIs. These URIs allow the applications to retrieve specific versions of a secret. There's no need to write custom code to protect any of the secret information stored in Key Vault.

Reference:

<https://docs.microsoft.com/en-us/learn/modules/manage-secrets-with-azure-key-vault/2-what-is-key-vault>
[https://docs.microsoft.com/en-us/learn/modules/manage-secrets-with-azure-key-vault/](https://docs.microsoft.com/en-us/azure/key-vault/key-vault-overview)

Question: 255

CertyIQ

Your company plans to automate the deployment of servers to Azure.
Your manager is concerned that you may expose administrative credentials during the deployment.
You need to recommend an Azure solution that encrypts the administrative credentials during the deployment.
What should you include in the recommendation?

- A. Azure Key Vault
- B. Azure Information Protection
- C. Azure Security Center
- D. Azure Multi-Factor Authentication (MFA)

Answer: A

Explanation:

Azure Key Vault is a secure store for storage various types of sensitive information. In this question, we would store the administrative credentials in the Key Vault.

With this solution, there is no need to store the administrative credentials as plain text in the deployment scripts.

All information stored in the Key Vault is encrypted.

Azure Key Vault can be used to Securely store and tightly control access to tokens, passwords, certificates, API keys, and other secrets.

Secrets and keys are safeguarded by Azure, using industry-standard algorithms, key lengths, and hardware security modules (HSMs). The HSMs used are

Federal Information Processing Standards (FIPS) 140-2 Level 2 validated.

Access to a key vault requires proper authentication and authorization before a caller (user or application) can get access. Authentication establishes the identity of the caller, while authorization determines the operations that they are allowed to perform.

Reference:

<https://docs.microsoft.com/en-us/azure/key-vault/key-vault-overview>

Question: 256

CertyIQ

You plan to deploy several Azure virtual machines.

You need to control the ports that devices on the Internet can use to access the virtual machines. What should you use?

- A. a network security group (NSG)
- B. an Azure Active Directory (Azure AD) role
- C. an Azure Active Directory group
- D. an Azure key vault

Answer: A

Explanation:

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network.

You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

Question: 257

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

After you create a virtual machine, you need to modify the

network security group (NSG)
virtual network gateway
virtual network
route table

to allow connections to TCP port 8080 on the virtual machine.

Answer:

Answer Area

After you create a virtual machine, you need to modify the

network security group (NSG)
virtual network gateway
virtual network
route table

to allow connections to TCP port 8080 on the virtual machine.

Explanation:

When you create a virtual machine, the default setting is to create a Network Security Group attached to the

network interface assigned to a virtual machine.

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network.

You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

In this question, we need to add a rule to the network security group to allow the connection to the virtual machine on port 8080.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

Question: 258

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can create custom Azure roles to control access to resources.	<input type="radio"/>	<input type="radio"/>
A user account can be assigned to multiple Azure roles.	<input type="radio"/>	<input type="radio"/>
A resource group can have the Owner role assigned to multiple users.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can create custom Azure roles to control access to resources.	<input checked="" type="checkbox"/>	<input type="radio"/>
A user account can be assigned to multiple Azure roles.	<input checked="" type="checkbox"/>	<input type="radio"/>
A resource group can have the Owner role assigned to multiple users.	<input checked="" type="checkbox"/>	<input type="radio"/>

Explanation:

Yes

Yes

Yes

Yes, in Azure, a resource group can have the Owner role assigned to multiple users. The Owner role is a built-in role in Azure that provides full access to all resources in a resource group, including the ability to create, modify, and delete resources.

When you assign the Owner role to a user or group, it grants them full access to all resources within the resource group. Multiple users or groups can be assigned the Owner role for a resource group, which allows for collaboration and delegation of responsibilities among different teams or individuals.

It's important to note that assigning the Owner role to multiple users or groups can increase the risk of accidental or intentional changes to resources within the resource group. Therefore, it's recommended to carefully consider the access needs of each user or group and assign roles accordingly to minimize the risk of unauthorized access or accidental changes.

Question: 259

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your Azure environment contains multiple Azure virtual machines.

You need to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

Solution: You modify a network security group (NSG).

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network.

You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

In this question, we need to add a rule to the network security group to allow the connection to the virtual machine on port 80 (HTTP).

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

Question: 260

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your Azure environment contains multiple Azure virtual machines.

You need to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

Solution: You modify a DDoS protection plan.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

DDoS is a form of attack on a network resource. A DDoS protection plan is used to protect against DDoS attacks; it does not provide connectivity to a virtual machine.

To ensure that a virtual machine named VM1 is accessible from the Internet over HTTP, you need to modify a network security group or Azure Firewall.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/ddos-protection-overview>

CertyIQ

Question: 261

You need to collect and automatically analyze security events from Azure Active Directory (Azure AD). What should you use?

- A. Azure Sentinel
- B. Azure Synapse Analytics
- C. Azure AD Connect
- D. Azure Key Vault

Answer: A

Explanation:

Microsoft Azure Sentinel is a scalable, cloud-native, security information event management (SIEM) and security orchestration automated response (SOAR) solution. Azure Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Azure Sentinel comes with a number of connectors for Microsoft solutions, available out of the box and providing real-time integration, including Microsoft 365 Defender (formerly Microsoft Threat Protection) solutions, and Microsoft 365 sources, including Office 365, Azure AD, Microsoft Defender for Identity (formerly Azure ATP), and Microsoft Cloud App Security, and more.

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/overview>

CertyIQ

Question: 262

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your Azure environment contains multiple Azure virtual machines.

You need to ensure that a virtual machine named VM1 is accessible from the Internet over HTTP.

Solution: You modify an Azure firewall.
Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Azure Firewall is a managed, cloud-based network security service that protects your Azure Virtual Network resources. It's a fully stateful firewall as a service with built-in high availability and unrestricted cloud scalability.

In this question, we need to add a rule to Azure Firewall to allow the connection to the virtual machine on port 80 (HTTP).

CertyIQ

Question: 263

This question requires that you evaluate the underlined text to determine if it is correct.
Azure Germany can be used by legal residents of Germany only.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. no change is needed
- B. only enterprises that are registered in Germany
- C. only enterprises that purchase their azure licenses from a partner based in Germany
- D. any user or enterprise that requires its data to reside in Germany

Answer: D

Explanation:

Azure Germany is available to eligible customers and partners globally who intend to do business in the EU/EFTA, including the United Kingdom.

Azure Germany offers a separate instance of Microsoft Azure services from within German datacenters. The datacenters are in two locations, Frankfurt/Main and

Magdeburg. This placement ensures that customer data remains in Germany and that the datacenters connect to each other through a private network. All customer data is exclusively stored in those datacenters. A designated German company--the German data trustee--controls access to customer data and the systems and infrastructure that hold customer data.

Reference:

<https://docs.microsoft.com/en-us/azure/germany/germany>Welcome?toc=%2fazure%2fgermany%2ftoc.json>
<https://docs.microsoft.com/en-us/azure/germany/germany-overview-data-trustee>

CertyIQ

Question: 264

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Identities stored in an on-premises Active Directory can be synchronized to Azure Active Directory (Azure AD).	<input type="radio"/>	<input type="radio"/>
Identities stored in Azure Active Directory (Azure AD), third-party cloud services, and on-premises Active Directory can be used to access Azure resources.	<input type="radio"/>	<input type="radio"/>
Azure has built-in authentication and authorization services that provide secure access to Azure resources.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Identities stored in an on-premises Active Directory can be synchronized to Azure Active Directory (Azure AD).	<input checked="" type="radio"/>	<input type="radio"/>
Identities stored in Azure Active Directory (Azure AD), third-party cloud services, and on-premises Active Directory can be used to access Azure resources.	<input checked="" type="radio"/>	<input type="radio"/>
Azure has built-in authentication and authorization services that provide secure access to Azure resources.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

The tool you would use to sync the accounts is Azure AD Connect. The Azure Active Directory Connect synchronization services (Azure AD Connect sync) is a main component of Azure AD Connect. It takes care of all the operations that are related to synchronize identity data between your on-premises environment and Azure AD.

Box 2: Yes -

As described above, third-party cloud services and on-premises Active Directory can be used to access Azure resources. This is known as 'federation'.

Federation is a collection of domains that have established trust. The level of trust may vary, but typically includes authentication and almost always includes authorization. A typical federation might include a number of organizations that have established trust for shared access to a set of resources.

Box 3: Yes -

Azure Active Directory (Azure AD) is a centralized identity provider in the cloud. This is the primary built-in authentication and authorization service to provide secure access to Azure resources.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-whatis> [https://docs.microsoft.com/en-us/azure/active-directory/develop/authentication-scenarios](https://docs.microsoft.com/en-us/azure/active-directory/hybrid/whatis-fed)

Question: 265

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

. You can view your company's regulatory compliance report from

Azure Advisor
Azure Analysis Services
Azure Monitor
Azure Security Center

Answer:

Answer Area

. You can view your company's regulatory compliance report from

Azure Advisor
Azure Analysis Services
Azure Monitor
Azure Security Center

Explanation:

The advanced monitoring capabilities in Security Center lets you track and manage compliance and governance over time. The overall compliance provides you with a measure of how much your subscriptions are compliant with policies associated with your workload.

Reference:

<https://docs.microsoft.com/en-us/azure/security-center/security-center-intro>

Question: 266

CertyIQ

What should you use to evaluate whether your company's Azure environment meets regulatory requirements?

- A. Azure Service Health
- B. Azure Knowledge Center
- C. Azure Security Center
- D. Azure Advisor

Answer: C

Explanation:

The advanced monitoring capabilities in Security Center lets you track and manage compliance and governance over time. The overall compliance provides you with a measure of how much your subscriptions are compliant with policies associated with your workload.

<https://docs.microsoft.com/en-us/azure/security-center/security-center-intro>

Question: 267

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Your company implements

to

Azure policies
DDoS protection
Azure Information Protection
Azure Active Directory (Azure AD) Identity Protection

automatically add a watermark to Microsoft Word documents that contain credit card information.

Answer:

Answer Area

Your company implements

to

Azure policies
DDoS protection
Azure Information Protection
Azure Active Directory (Azure AD) Identity Protection

automatically add a watermark to Microsoft Word documents that contain credit card information.

Explanation:

Azure Information Protection is used to automatically add a watermark to Microsoft Word documents that contain credit card information.

You use Azure Information Protection labels to apply classification to documents and emails. When you do this, the classification is identifiable regardless of where the data is stored or with whom it's shared. The labels can include visual markings such as a header, footer, or watermark.

Labels can be applied automatically by administrators who define rules and conditions, manually by users, or a combination where users are given recommendations. In this question, we would configure a label to be automatically applied to Microsoft Word documents that contain credit card information. The label would then add the watermark to the documents.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/what-is-information-protection> <https://docs.microsoft.com/en-us/azure/information-protection/infoprotect-quick-start-tutorial>

Question: 268

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Azure Active Directory (Azure AD) requires the implementation of domain controllers on Azure virtual machines.

Azure Active Directory (Azure AD) provides authentication services for resources hosted in Azure and Microsoft 365.

Each user account in Azure Active Directory (Azure AD) can be assigned only one license.

Answer:

Answer Area

Statements

Yes No

Azure Active Directory (Azure AD) requires the implementation of domain controllers on Azure virtual machines.

Azure Active Directory (Azure AD) provides authentication services for resources hosted in Azure and Microsoft 365.

Each user account in Azure Active Directory (Azure AD) can be assigned only one license.

Explanation:

Box 1: No -

Azure Active Directory (Azure AD) is a cloud-based service. It does not require domain controllers on virtual

machines.

Box 2: Yes -

Azure Active Directory (Azure AD) is a centralized identity provider in the cloud. This is the primary built-in authentication and authorization service to provide secure access to Azure resources and Microsoft 365.

Box 3: No -

User accounts in Azure Active Directory can be assigned multiple licenses for different Azure or Microsoft 365 services.

Question: 269

CertyIQ

Which two types of customers are eligible to use Azure Government to develop a cloud solution? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. a Canadian government contractor
- B. a European government contractor
- C. a United States government entity
- D. a United States government contractor
- E. a European government entity

Answer: CD

Explanation:

Azure Government is a cloud environment specifically built to meet compliance and security requirements for US government. This mission-critical cloud delivers breakthrough innovation to U.S. government customers and their partners. Azure Government applies to government at any level " from state and local governments to federal agencies including Department of Defense agencies.

The key difference between Microsoft Azure and Microsoft Azure Government is that Azure Government is a sovereign cloud. It's a physically separated instance of Azure, dedicated to U.S. government workloads only. It's built exclusively for government agencies and their solution providers.

Reference:

<https://docs.microsoft.com/en-us/learn/modules/intro-to-azure-government/2-what-is-azure-government>

Question: 270

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
To implement an Azure Multi-Factor Authentication (MFA) solution, you must sync on-premises identities to the cloud.	<input type="radio"/>	<input type="radio"/>
Two valid methods for Azure Multi-Factor Authentication (MFA) are picture identification and a passport number.	<input type="radio"/>	<input type="radio"/>
Azure Multi-Factor Authentication (MFA) can be required for administrative and non-administrative user accounts.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
To implement an Azure Multi-Factor Authentication (MFA) solution, you must sync on-premises identities to the cloud.	<input type="radio"/>	<input checked="" type="radio"/>
Two valid methods for Azure Multi-Factor Authentication (MFA) are picture identification and a passport number.	<input type="radio"/>	<input checked="" type="radio"/>
Azure Multi-Factor Authentication (MFA) can be required for administrative and non-administrative user accounts.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

It is not true that you must deploy a federation solution or sync on-premises identities to the cloud. You can have a cloud-only environment and use MFA.

Box 2: No -

Picture identification and passport numbers are not valid MFA authentication methods. Valid methods include: Password, Microsoft Authenticator App, SMS and Voice call.

Box 3:

You can configure MFA to be required for administrator accounts only or you can configure MFA for any user account.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-getstarted> <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods>

Question: 271

CertyIQ

You need to ensure that when Azure Active Directory (Azure AD) users connect to Azure AD from the Internet by using an anonymous IP address, the users are prompted automatically to change their password. Which Azure service should you use?

- A. Azure AD Connect Health
- B. Azure AD Privileged Identity Management
- C. Azure Advanced Threat Protection (ATP)
- D. Azure AD Identity Protection

Answer: D

Explanation:

Azure AD Identity Protection includes two risk policies: sign-in risk policy and user risk policy. A sign-in risk represents the probability that a given authentication request isn't authorized by the identity owner.

There are several types of risk detection. One of them is Anonymous IP Address. This risk detection type indicates sign-ins from an anonymous IP address (for example, Tor browser or anonymous VPN). These IP addresses are typically used by actors who want to hide their login telemetry (IP address, location, device, etc.) for potentially malicious intent.

You can configure the sign-in risk policy to require that users change their password.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-sign-in-risk-policy> <https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/concept-identity-protection-risks>

Question: 272

CertyIQ

DRAG DROP -

Match the term to the correct definition.

Instructions: To answer, drag the appropriate term from the column on the left to its description on the right. Each term may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Options

Answer Area

Azure Government

An organization that defines international standards across all industries.

GDPR

An organization that defines standards used by the United States government.

ISO

A European policy that regulates data privacy and data protection.

NIST

A dedicated public cloud for federal and state agencies in the United States.

Answer:

Answer Options	Answer Area	
Azure Government	ISO	An organization that defines international standards across all industries.
GDPR	NIST	An organization that defines standards used by the United States government.
ISO	GDPR	A European policy that regulates data privacy and data protection.
NIST	Azure Government	A dedicated public cloud for federal and state agencies in the United States.

Explanation:

Box 1: ISO -

ISO is the International Organization for Standardization. Companies can be certified to ISO standards, for example ISO 9001 or 27001 are commonly used in IT companies.

Box 2: NIST -

The National Institute of Standards and Technology (NIST) is a physical sciences laboratory, and a non-regulatory agency of the United States Department of Commerce.

Box 3: GDPR -

GDPR is the General Data Protection Regulations. This standard was adopted across Europe in May 2018 and replaces the now deprecated Data Protection Directive.

The General Data Protection Regulation (EU) (GDPR) is a regulation in EU law on data protection and privacy in the European Union (EU) and the European Economic Area (EEA). It also addresses the transfer of personal data outside the EU and EEA areas. The GDPR aims primarily to give control to individuals over their personal data and to simplify the regulatory environment for international business by unifying the regulation within the EU.

Box 4: Azure Government -

US government agencies or their partners interested in cloud services that meet government security and compliance requirements, can be confident that

Microsoft Azure Government provides world-class security, protection, and compliance services. Azure Government delivers a dedicated cloud enabling government agencies and their partners to transform mission-critical workloads to the cloud. Azure Government services handle data that is subject to certain government regulations and requirements, such as FedRAMP, NIST 800.171 (DIB), ITAR, IRS 1075, DoD L4, and CJIS. In order to provide you with the highest level of security and compliance, Azure Government uses physically isolated datacenters and networks (located in U.S. only).

Reference:

https://en.wikipedia.org/wiki/National_Institute_of_Standards_and_Technology https://en.wikipedia.org/wiki/General_Data_Protection_Regulation <https://docs.microsoft.com/en-us/azure/azure-government/documents-on-government-welcome>

Question: 273

CertyIQ

To what should an application connect to retrieve security tokens?

- A. an Azure Storage account

- B. Azure Active Directory (Azure AD)
- C. a certificate store
- D. an Azure key vault

Answer: D

Explanation:

Key Vault is designed to store configuration secrets for server apps.

Incorrect Answers:

A: An Azure Storage account is used to store data. It is not used to store secrets for applications.

B: Azure Active Directory (Azure AD) is a centralized identity provider in the cloud that authenticates users and provides access tokens to them. It is not used for applications.

Reference:

<https://docs.microsoft.com/en-us/learn/modules/manage-secrets-with-azure-key-vault/2-what-is-key-vault>

<https://docs.microsoft.com/en-us/azure/key-vault/key-vault-overview>

Question: 274

CertyIQ

Your network contains an Active Directory forest. The forest contains 5,000 user accounts.

Your company plans to migrate all network resources to Azure and to decommission the on-premises data center.

You need to recommend a solution to minimize the impact on users after the planned migration.

What should you recommend?

- A. Implement Azure Multi-Factor Authentication (MFA)
- B. Sync all the Active Directory user accounts to Azure Active Directory (Azure AD)
- C. Instruct all users to change their password
- D. Create a guest user account in Azure Active Directory (Azure AD) for each user

Answer: B

Explanation:

To migrate to Azure and decommission the on-premises data center, you would need to create the 5,000 user accounts in Azure Active Directory. The easy way to do this is to sync all the Active Directory user accounts to Azure Active Directory (Azure AD). You can even sync their passwords to further minimize the impact on users.

The tool you would use to sync the accounts is Azure AD Connect. The Azure Active Directory Connect synchronization services (Azure AD Connect sync) is a main component of Azure AD Connect. It takes care of all the operations that are related to synchronize identity data between your on-premises environment and Azure AD.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-whatis>

Question: 275

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can configure the Azure Active Directory (Azure AD) activity logs to appear in Azure Monitor.	<input type="radio"/>	<input type="radio"/>
From Azure Monitor, you can monitor resources across multiple Azure subscriptions.	<input type="radio"/>	<input type="radio"/>
From Azure Monitor, you can create alerts.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can configure the Azure Active Directory (Azure AD) activity logs to appear in Azure Monitor.	<input checked="" type="radio"/>	<input type="radio"/>
From Azure Monitor, you can monitor resources across multiple Azure subscriptions.	<input checked="" type="radio"/>	<input type="radio"/>
From Azure Monitor, you can create alerts.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

You can send Azure AD activity logs to Azure Monitor logs to enable rich visualizations, monitoring and alerting on the connected data.

All data collected by Azure Monitor fits into one of two fundamental types, metrics and logs (including Azure AD activity logs). Activity logs record when resources are created or modified. Metrics tell you how the resource is performing and the resources that it's consuming.

Box 2: Yes -

Azure Monitor can consolidate log entries from multiple Azure resources, subscriptions, and tenants into one location for analysis together.

Box 3: Yes -

You can create alerts in Azure Monitor.

Alerts in Azure Monitor proactively notify you of critical conditions and potentially attempt to take corrective action. Alert rules based on metrics provide near real time alerting based on numeric values, while rules based on logs allow for complex logic across data from multiple sources.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-activity-logs-azure-monitor>
<https://docs.microsoft.com/en-us/azure/azure-monitor/overview>

HOTSPOT -

You create a resource group named RG1 in Azure Resource Manager.

You need to prevent the accidental deletion of the resources in RG1.

Which setting should you use? To answer, select the appropriate setting in the answer area.

Hot Area:

Settings

Quickstart

Resource costs

Deployments

Policies

Properties

Locks

Export template

Answer:

Settings

Quickstart

Resource costs

Deployments

Policies

Properties

Locks

Export template

Explanation:

You can configure a lock on a resource group to prevent the accidental deletion.

As an administrator, you may need to lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. You can set the lock level to CanNotDelete or ReadOnly. In the portal, the locks are called Delete and Read-only respectively.

⇒ CanNotDelete means authorized users can still read and modify a resource, but they can't delete the resource.

⇒ ReadOnly means authorized users can read a resource, but they can't delete or update the resource.

Applying this lock is similar to restricting all authorized users to the permissions granted by the Reader role.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-lock-resources>

Question: 277

CertyIQ

You have a resource group named RG1.

You need to prevent the creation of virtual machines in RG1. The solution must ensure that other objects can be created in RG1.

What should you use?

- A. a lock
- B. an Azure role
- C. a tag
- D. an Azure policy

Answer: D**Explanation:**

Azure policies can be used to define requirements for resource properties during deployment and for already existing resources. Azure Policy controls properties such as the types or locations of resources.

Azure Policy is a service in Azure that you use to create, assign, and manage policies. These policies enforce different rules and effects over your resources, so those resources stay compliant with your corporate standards and service level agreements.

In this question, we would create an Azure policy assigned to the resource group that denies the creation of virtual machines in the resource group.

You could place a read-only lock on the resource group. However, that would prevent the creation of any resources in the resource group, not virtual machines only. Therefore, an Azure Policy is a better solution.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

CertyIQ**Question: 278**

You have an Azure subscription and 100 Windows 10 devices.

You need to ensure that only users whose devices have the latest security patches installed can access Azure Active Directory (Azure AD)-integrated applications.

What should you implement?

- A. a conditional access policy
- B. Azure Bastion
- C. Azure Firewall
- D. Azure Policy

Answer: A**Explanation:**

A conditional access policy is a feature of Azure Active Directory (Azure AD) that enables you to control access to cloud applications based on a set of conditions. You can use a conditional access policy to restrict access to Azure AD-integrated applications to only those devices that meet certain security requirements, such as having the latest security patches installed.

By implementing a conditional access policy, you can ensure that only users whose devices have the latest security patches can access Azure AD-integrated applications, while blocking access for users with devices that do not meet the security requirements.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/concept-conditional-access-policies>

CertyIQ**Question: 279**

What can Azure Information Protection encrypt?

- A. network traffic
- B. documents and email messages

- C. an Azure Storage account
- D. an Azure SQL database

Answer: B

Explanation:

Azure Information Protection can encrypt documents and emails.
Azure Information Protection is a cloud-based solution that helps an organization to classify and optionally, protect its documents and emails by applying labels.
Labels can be applied automatically by administrators who define rules and conditions, manually by users, or a combination where users are given recommendations.
The protection technology uses Azure Rights Management (often abbreviated to Azure RMS). This technology is integrated with other Microsoft cloud services and applications, such as Office 365 and Azure Active Directory.
This protection technology uses encryption, identity, and authorization policies. Similarly to the labels that are applied, protection that is applied by using Rights Management stays with the documents and emails, independently of the location "inside or outside your organization, networks, file servers, and applications.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/what-is-information-protection> <https://docs.microsoft.com/en-us/azure/information-protection/quickstart-label-dnf-protectedemail>

Question: 280

CertyIQ

What should you use to evaluate whether your company's Azure environment meets regulatory requirements?

- A. the Knowledge Center website
- B. the Advisor blade from the Azure portal
- C. Compliance Manager from the Service Trust Portal
- D. the Solutions blade from the Azure portal

Answer: C

Explanation:

Compliance Manager in the Service Trust Portal is a workflow-based risk assessment tool that helps you track, assign, and verify your organization's regulatory compliance activities related to Microsoft Cloud services, such as Microsoft 365, Dynamics 365, and Azure.

Compliance Manager has moved from the Service Trust Portal to its new location in the Microsoft 365 compliance center

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal?view=o365-worldwide>

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal?view=o365-worldwide>

Question: 281

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Application security groups in Azure
Azure Active Directory (Azure AD)
Azure Key Vault
Azure Security Center

enables users to authenticate to multiple applications by using single sign-on (SSO).

Answer:**Answer Area**

Application security groups in Azure
Azure Active Directory (Azure AD)
Azure Key Vault
Azure Security Center

enables users to authenticate to multiple applications by using single sign-on (SSO).

Explanation:**Azure AD provides services such as:**

- Single sign-on: Single sign-on (SSO) enables you to remember only one username and one password to access multiple applications. A single identity is tied to a user, which simplifies the security model. As users change roles or leave an organization, access modifications are tied to that identity, which greatly reduces the effort needed to change or disable accounts.

<https://learn.microsoft.com/en-us/training/modules/describe-azure-identity-access-security/3-authentication-methods>

Question: 282

CertyIQ

You have an Azure subscription.

Where will you find details on the personal data collected by Microsoft, how Microsoft uses the data, and what the data is used for?

- A. the Data Protection Addendum
- B. the Microsoft Online Services Terms
- C. the Microsoft Privacy Statement
- D. Azure Security Center

Answer: C**Explanation:**

The Microsoft Privacy Statement explains the personal data Microsoft processes, how Microsoft processes it,

and for what purposes. Your applicable Services Agreement or the Preview Supplemental Terms may specify lesser or different privacy measures for some Preview services.

Reference:

<https://azure.microsoft.com/en-us/support/legal/>

Question: 283

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Active Directory (Azure AD) can be used to manage access to on-premises applications.	<input type="radio"/>	<input type="radio"/>
Azure Active Directory (Azure AD) provides single sign-on (SSO).	<input type="radio"/>	<input type="radio"/>
iOS devices can be registered in Azure Active Directory (Azure AD).	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Active Directory (Azure AD) can be used to manage access to on-premises applications.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Active Directory (Azure AD) provides single sign-on (SSO).	<input checked="" type="radio"/>	<input type="radio"/>
iOS devices can be registered in Azure Active Directory (Azure AD).	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-whatis> <https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/what-is-single-sign-on> <https://docs.microsoft.com/en-us/azure/active-directory/devices/concept-azure-ad-register>

Question: 284

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You have an Azure virtual network named VNET1 in a resource group named RG1.

You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1

- is deleted automatically.
- is moved automatically to another resource group.
- continues to function normally.
- is now a read-only object.

Answer:

Answer Area

You have an Azure virtual network named VNET1 in a resource group named RG1.

You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1

- is deleted automatically.
- is moved automatically to another resource group.
- continues to function normally.
- is now a read-only object.

Explanation:

The VNet will be marked as 'Non-compliant' when the policy is assigned. However, it will not be deleted and will continue to function normally.

Azure Policy is a service in Azure that you use to create, assign, and manage policies. These policies enforce different rules and effects over your resources, so those resources stay compliant with your corporate standards and service level agreements.

If there are any existing resources that aren't compliant with a new policy assignment, they appear under Non-compliant resources.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/overview> <https://docs.microsoft.com/en-us/azure/governance/policy/assign-policy-portal>

Question: 285

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Trust Center is part of the Azure Security Center	<input type="radio"/>	<input type="radio"/>
Trust Center can only be accessed by users that have an Azure subscription	<input type="radio"/>	<input type="radio"/>
Trust Center provides information about the Azure compliance offerings	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Trust Center is part of the Azure Security Center	<input type="radio"/>	<input checked="" type="radio"/>
Trust Center can only be accessed by users that have an Azure subscription	<input type="radio"/>	<input checked="" type="radio"/>
Trust Center provides information about the Azure compliance offerings	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Reference:

<https://www.microsoft.com/en-us/trust-center>

Question: 286

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can use Azure Policy to apply tags to resources	<input type="radio"/>	<input type="radio"/>
You can add multiple tags to the same Azure resource	<input type="radio"/>	<input type="radio"/>
An Azure resource inherits tags from the resource group to which the resource is deployed	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can use Azure Policy to apply tags to resources	<input checked="" type="radio"/>	<input type="radio"/>
You can add multiple tags to the same Azure resource	<input checked="" type="radio"/>	<input type="radio"/>
An Azure resource inherits tags from the resource group to which the resource is deployed	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes -

You use Azure Policy to enforce tagging rules and conventions.

Box 2: Yes -

Each resource or resource group can have a maximum of 50 tags.

Box 3: No -

Tags applied to the resource group or subscription aren't inherited by the resources.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-policies> <https://docs.microsoft.com/en-us/azure/governance/policy/tutorials/govern-tags> <https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-resources>

Question: 287

CertyIQ

DRAG DROP -

Match the resources to the appropriate descriptions.

To answer, drag the appropriate resource from the column on the left to its description on the right. Each resource may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Resources	Answer Area
Data Protection Addendum	Resource Describes which personal data is collected, how the data is used, and what the data is used for.
Microsoft Privacy Statement	Resource A legal agreement that details the obligations between Microsoft and a customer regarding the processing and security of customer data and personal data.
Online Services Terms	Resource Defines the data processing and security terms for online services, including the disclosure of processed data and the transfer, retention, and deletion of data.

Answer:

Resources	Answer Area
Data Protection Addendum	Microsoft Privacy Statement Describes which personal data is collected, how the data is used, and what the data is used for.
Microsoft Privacy Statement	Online Services Terms A legal agreement that details the obligations between Microsoft and a customer regarding the processing and security of customer data and personal data.
Online Services Terms	Data Protection Addendum Defines the data processing and security terms for online services, including the disclosure of processed data and the transfer, retention, and deletion of data.

Explanation:

1. Microsoft Privacy Statement.
2. Online Services Terms: The Online Services Terms (OST) is a legal agreement between Microsoft and the customer. The OST details the obligations by both parties with respect to the processing and security of customer data and personal data. The OST applies specifically to Microsoft's online services that you license through a subscription, including Azure, Dynamics 365, Office 365, and Bing Maps.
3. Data Protection Addendum: The Data Protection Addendum (DPA) further defines the data processing and security terms for online services. These terms include, Disclosure of processed data, Data transfer, retention, and deletion, etc..

Question: 288

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Requiring a user to enter a password and answer a security question when signing-in to Azure Active Directory (Azure AD) is an example of

business-to-customer (B2C) identity services.
managed identities.
multi-factor authentication (MFA).
role-based access control (RBAC).

Answer:

Answer Area

Requiring a user to enter a password and answer a security question when signing-in to Azure Active Directory (Azure AD) is an example of

- business-to-customer (B2C) identity services.
- managed identities.
- multi-factor authentication (MFA).**
- role-based access control (RBAC).

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-mfa-howitworks>

Question: 289

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Azure China

- is operated by Microsoft.
- has feature parity with Azure global.
- services can be accessed from China only.
- is a distinct separate instance of Microsoft Azure.**

Answer:

Answer Area

Azure China

- is operated by Microsoft.
- has feature parity with Azure global.
- services can be accessed from China only.**
- is a distinct separate instance of Microsoft Azure.

Explanation:

“is a distinct separate instance of Microsoft Azure”

Microsoft Azure operated by 21Vianet (Azure China) is a physically separated instance of cloud services located in China.

CertyIQ**Question: 290**

What should you use to evaluate whether your company's Azure environment meets regulatory requirements?

- A. Azure Service Health
- B. Azure Knowledge Center
- C. Microsoft Defender for Cloud
- D. Azure Advisor

Answer: C**Explanation:**

Microsoft Defender for Cloud helps streamline the process for meeting regulatory compliance requirements, using the regulatory compliance dashboard.

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/regulatory-compliance-dashboard>

CertyIQ**Question: 291**

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

You can review audit reports and compliance-related information for Azure services from

Microsoft Defender for Cloud.
the Microsoft Defender for Identity admin center.
the Microsoft 365 Compliance center.
the Microsoft Service Trust Portal.

Answer:**Answer Area**

You can review audit reports and compliance-related information for Azure services from

Microsoft Defender for Cloud.
the Microsoft Defender for Identity admin center.
the Microsoft 365 Compliance center.
the Microsoft Service Trust Portal.

Explanation:

Microsoft Service Trust Portal.

The Microsoft Service Trust Portal provides a variety of content, tools, and other resources about Microsoft security, privacy, and compliance practices.

Trust Documents -

Provides a wealth of security implementation and design information with the goal of making it easier for you to meet regulatory compliance objectives by understanding how Microsoft Cloud services keep your data

secure. To review content, select one of the following options on the Trust Documents pull-down menu.

* Audit Reports: A list of independent audit and assessment reports on Microsoft's Cloud services is displayed.

These reports provide information about Microsoft

Cloud services compliance with data protection standards and regulatory requirements.

* Data Protection: Contains a wealth of resources such as audited controls, white papers, FAQs, penetration tests, risk assessment tools, and compliance guides.

* Azure Security and Compliance Blueprints: Resources that help you build secure and compliant cloud-based applications. This area contains blueprint-guidance for government, finance, healthcare, and retail verticals.

Incorrect:

Not: Microsoft Defender for Cloud.

Defender for Cloud is a tool for security posture management and threat protection. It strengthens the security posture of your cloud resources, and with its integrated Microsoft Defender plans, Defender for Cloud protects workloads running in Azure, hybrid, and other cloud platforms.

Defender for Cloud provides the tools needed to harden your resources, track your security posture, protect against cyber attacks, and streamline security management.

Not: the Microsoft 365 Compliance center

The Security & Compliance Center lets you grant permissions to people who perform compliance tasks like device management, data loss prevention, eDiscovery, retention, and so on. These people can perform only the tasks that you explicitly grant them access to.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal>

Question: 292

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
The Microsoft Service Trust Portal can be accessed by using a Microsoft cloud services account.	<input type="radio"/>	<input type="radio"/>
Compliance Manager can be used to track your company's regulatory compliance activities related to Microsoft cloud services.	<input type="radio"/>	<input type="radio"/>
The My Library feature can be used to save Microsoft Service Trust Portal documents and resources in a single location.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
The Microsoft Service Trust Portal can be accessed by using a Microsoft cloud services account.	<input checked="" type="radio"/>	<input type="radio"/>
Compliance Manager can be used to track your company's regulatory compliance activities related to Microsoft cloud services.	<input checked="" type="radio"/>	<input type="radio"/>
The My Library feature can be used to save Microsoft Service Trust Portal documents and resources in a single location.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

<https://learn.microsoft.com/en-us/microsoft-365/compliance/compliance-manager>

Microsoft Purview Compliance Manager is a feature in the Microsoft Purview compliance portal that helps you manage your organization's multicloud compliance requirements with greater ease and convenience.

Compliance Manager can help you throughout your compliance journey, from taking inventory of your data protection risks to managing the complexities of implementing controls, staying current with regulations and certifications, and reporting to auditors.

<https://learn.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal?view=o365-worldwide#all-documents>

This section displays all available documents. Select the documents to save into your My Library section. Documents are sorted under the same categories shown under Certifications, Standards, Regulations, and Industry Resources. To view all resources for a particular cloud service use the Cloud Service filter.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal?view=o365-worldwide>

Question: 293

CertyIQ

Your company has an Azure subscription that contains resources in several regions. You need to create the Azure resource that must be used to meet the policy requirement. What should you create?

- A. a read-only lock
- B. an Azure policy
- C. a management group
- D. a reservation

Answer: B

Explanation:

Azure policies can be used to define requirements for resource properties during deployment and for already existing resources. Azure Policy controls properties such as the types or locations of resources.

Azure Policy is a service in Azure that you use to create, assign, and manage policies. These policies enforce different rules and effects over your resources, so those resources stay compliant with your corporate

standards and service level agreements. Azure Policy meets this need by evaluating your resources for non-compliance with assigned policies. All data stored by Azure Policy is encrypted at rest.

Azure Policy offers several built-in policies that are available by default. In this question, we would use the 'Allowed Locations' policy to define the locations where resources can be deployed.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

CertyIQ

Question: 294

This question requires that you evaluate the underlined text to determine if it is correct.

From Azure Cloud Shell, you can track your company's regulatory standards and regulations, such as ISO 27001.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed.' If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. the Microsoft Cloud Partner Portal
- C. Compliance Manager
- D. the Trust Center

Answer: C

Explanation:

It used to be "Trust Center", but now it is called Microsoft Purview Compliance Manager.

<https://docs.microsoft.com/en-us/microsoft-365/compliance/compliance-manager?view=o365-worldwide>

Microsoft Compliance Manager (Preview) is a free workflow-based risk assessment tool that lets you track, assign, and verify regulatory compliance activities related to Microsoft cloud services. Azure Cloud Shell, on the other hand, is an interactive, authenticated, browser-accessible shell for managing Azure resources.

References:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/compliance-manager-overview>

<https://docs.microsoft.com/en-us/azure/cloud-shell/overview>

Question: 297

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

is the process of verifying a user's credentials.

Authorization
Authentication
Federation
Ticketing

Answer:

Answer Area

Authorization
Authentication
Federation
Ticketing

is the process of verifying a user's credentials.

Explanation:

Authentication, not authorization is the process of verifying a user's credentials.

The difference between authentication and authorization is:

- ⇒ Authentication is proving your identity, proving that you are who you say you are. The most common example of this is logging in to a system by providing credentials such as a username and password.
- ⇒ Authorization is what you're allowed to do once you've been authenticated. For example, what resources you're allowed to access and what you can do with those resources.

Question: 298

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An Azure Policy initiative definition is a

collection of policy definitions
collection of Azure Policy definition assignments
group of Azure Blueprints definitions
group of role-based access control (RBAC) role assignments

Answer:

Answer Area

An Azure Policy initiative definition is a

collection of policy definitions
collection of Azure Policy definition assignments
group of Azure Blueprints definitions
group of role-based access control (RBAC) role assignments

Explanation:

"collect of policy definitions" is the answer.

<https://learn.microsoft.com/en-us/azure/governance/policy/overview#initiative-definition>

An initiative definition is a collection of policy definitions that are tailored toward achieving a singular overarching goal. Initiative definitions simplify managing and assigning policy definitions. They simplify by grouping a set of policies as one single item. For example, you could create an initiative titled Enable Monitoring in Microsoft Defender for Cloud, with a goal to monitor all the available security recommendations in your Microsoft Defender for Cloud instance.

Question: 299

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Resource groups
Management groups
Azure policies
Azure App Service plans

provide organizations with the ability to manage the compliance of Azure resources across multiple subscriptions.

Answer:

Answer Area

Resource groups
Management groups
Azure policies
Azure App Service plans

provide organizations with the ability to manage the compliance of Azure resources across multiple subscriptions.

Explanation:

"If your organization has many subscriptions, you may need a way to efficiently manage access, policies, and compliance for those subscriptions. Azure management groups provide a level of scope above subscriptions. You organize subscriptions into containers called "management groups" and apply your governance conditions to the management groups. All subscriptions within a management group automatically inherit the conditions applied to the management group. Management groups give you enterprise-grade management at a large scale no matter what type of subscriptions you might have....."

For example, you can apply POLICIES to a management group that limits the regions available for virtual machine (VM) creation. This policy would be applied to all management groups, subscriptions, and RESOURCES under that management group by only allowing VMs to be created in that region."

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

<https://docs.microsoft.com/en-us/azure/governance/management-groups/overview>

Question: 300

HOTSPOT -

You can add an Azure Resource Manager template to an Azure blueprint.	<input type="radio"/>	<input type="radio"/>
You can assign an Azure blueprint to a resource group.	<input type="radio"/>	<input type="radio"/>
You can use Azure Blueprints to grant permissions to a resource.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can add an Azure Resource Manager template to an Azure blueprint.	<input checked="" type="radio"/>	<input type="radio"/>
You can assign an Azure blueprint to a resource group.	<input type="radio"/>	<input checked="" type="radio"/>
You can use Azure Blueprints to grant permissions to a resource.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/governance/blueprints/overview>

Based on <https://docs.microsoft.com/en-us/azure/governance/blueprints/overview>

Y: Each blueprint can consist of zero or more ARM template artifacts. This support means that previous efforts to develop and maintain a library of ARM templates are reusable in Azure Blueprints.

N: Create a new resource group for use by other artifacts **WITHIN** the blueprint. When creating a blueprint definition, you'll define where the blueprint is saved. Blueprints can be saved to a management group or subscription that you have Contributor access to. If the location is a management group, the blueprint is available to assign to any child subscription of that management group. Each Published Version of a blueprint can be assigned (with a max name length of 90 characters) to an existing management group or subscription.

Y: The blueprint definition permissions must be granted or inherited on the management group or subscription scope where it is saved --> Meaning this would grant permissions to the resources

Answer Area**Statements****Yes****No**

Azure China is operated by Microsoft.

Azure Government is operated by Microsoft.

Azure Government is available only to US government agencies and their partners.

Answer:

Answer Area**Statements****Yes****No**

Azure China is operated by Microsoft.

Azure Government is operated by Microsoft.

Azure Government is available only to US government agencies and their partners.

Explanation:

<https://learn.microsoft.com/en-us/azure/china/overview-operations>

Microsoft Azure operated by 21Vianet (Azure China) is a physically separated instance of cloud services located in China. It's independently operated and transacted by Shanghai Blue Cloud Technology Co., Ltd. ("21Vianet"), a wholly owned subsidiary of Beijing 21Vianet Broadband Data Center Co., Ltd..

<https://learn.microsoft.com/en-us/azure/azure-government/documentation-government-welcome>

US government agencies or their partners interested in cloud services that meet government security and compliance requirements, can be confident that Microsoft Azure Government provides world-class security and compliance. Azure Government delivers a dedicated cloud enabling government agencies and their partners to transform mission-critical workloads to the cloud. Azure Government services can accommodate data that is subject to various US government regulations and requirements.

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
An Azure resource can have multiple Delete locks.	<input type="radio"/>	<input type="radio"/>
An Azure resource inherits locks from its resource group.	<input type="radio"/>	<input type="radio"/>
If an Azure resource has a Read-only lock, you can add a Delete lock to the resource.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
An Azure resource can have multiple Delete locks.	<input checked="" type="radio"/>	<input type="radio"/>
An Azure resource inherits locks from its resource group.	<input checked="" type="radio"/>	<input type="radio"/>
If an Azure resource has a Read-only lock, you can add a Delete lock to the resource.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

An Azure resource can have multiple Delete locks.

Yes.

In Azure, you can apply multiple locks to a resource. However, only one lock of each type (ReadOnly, CanNotDelete) can be applied to a resource. So, while you can have multiple locks, they must be of different types.

An Azure resource inherits locks from its resource group.

Yes.

Azure resources inherit locks from their parent resource groups. If a resource group has a lock, all resources within that group will inherit the same lock unless explicitly overridden.

If an Azure resource has a Read-only lock, you can add a Delete lock to the resource.

Yes.

You can add a Delete lock (CanNotDelete) to a resource that already has a Read-only lock. The Read-only lock prevents modifications, while the Delete lock prevents deletion. They serve different purposes and can coexist.

Question: 304

CertyIQ

Your company plans to migrate all on-premises data to Azure.

You need to identify whether Azure complies with the company's regional requirements.
What should you use?

- A. the Knowledge Center
- B. Azure Marketplace
- C. the MyApps portal
- D. the Trust Center

Answer: D

Explanation:

Azure has more than 90 compliance certifications, including over 50 specific to global regions and countries, such as the US, the European Union, Germany, Japan, the United Kingdom, India and China.

You can view a list of compliance certifications in the Trust Center to determine whether Azure meets your regional requirements.

Reference:

<https://azure.microsoft.com/en-gb/overview/trusted-cloud/compliance/> <https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal>

Question: 305

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Authorization to access Azure resources can be provided only to Azure Active Directory (Azure AD) users.	<input type="radio"/>	<input type="radio"/>
Identities stored in Azure Active Directory (Azure AD), third-party cloud services, and on-premises Active Directory can be used to access Azure resources.	<input type="radio"/>	<input type="radio"/>
Azure has built-in authentication and authorization services that provide secure access to Azure resources.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Authorization to access Azure resources can be provided only to Azure Active Directory (Azure AD) users.	<input type="radio"/>	<input checked="" type="radio"/>
Identities stored in Azure Active Directory (Azure AD), third-party cloud services, and on-premises Active Directory can be used to access Azure resources.	<input checked="" type="radio"/>	<input type="radio"/>
Azure has built-in authentication and authorization services that provide secure access to Azure resources.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

Authorization to access Azure resources can be provided by other identity providers by using federation. A commonly used example of this is to federate your on-premises Active Directory environment with Azure AD and use this federation for authentication and authorization.

Box 2: Yes -

As described above, third-party cloud services and on-premises Active Directory can be used to access Azure resources. This is known as 'federation'.

Federation is a collection of domains that have established trust. The level of trust may vary, but typically includes authentication and almost always includes authorization. A typical federation might include a number of organizations that have established trust for shared access to a set of resources.

Box 3: Yes -

Azure Active Directory (Azure AD) is a centralized identity provider in the cloud. This is the primary built-in authentication and authorization service to provide secure access to Azure resources.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/whatis-fed> <https://docs.microsoft.com/en-us/azure/active-directory/develop/authentication-scenarios>

Question: 306

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

If a resource group named RG1 has a delete lock,

can delete RG1.

- only a member of the global administrators group
- the delete lock must be removed before an administrator
- an Azure policy must be modified before an administrator
- an Azure tag must be added before an administrator

Answer:

Answer Area

If a resource group named RG1 has a delete lock,

can delete RG1.

- only a member of the global administrators group
- the delete lock must be removed before an administrator
- an Azure policy must be modified before an administrator
- an Azure tag must be added before an administrator

Explanation:

You can configure a lock on a resource group to prevent the accidental deletion of the resource group. The lock applies to everyone, including global administrators. If you want to delete the resource group, the lock must be removed first.

As an administrator, you may need to lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. You can set the lock level to CanNotDelete or ReadOnly. In the portal, the locks are called Delete and Read-only respectively.

⇒ CanNotDelete means authorized users can still read and modify a resource, but they can't delete the resource.

ReadOnly means authorized users can read a resource, but they can't delete or update the resource. Applying this lock is similar to restricting all authorized

- users to the permissions granted by the Reader role.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-lock-resources>

Question: 307

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

<input checked="" type="checkbox"/>	Authentication
<input type="checkbox"/>	Authorization
<input type="checkbox"/>	Conditional Access
<input type="checkbox"/>	Synchronization

is the process of establishing the identity of a user or service that wants to access a resource.

Answer:

Answer Area

<input checked="" type="checkbox"/>	Authentication
<input type="checkbox"/>	Authorization
<input type="checkbox"/>	Conditional Access
<input type="checkbox"/>	Synchronization

is the process of establishing the identity of a user or service that wants to access a resource.

Question: 308

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Single sign-on (SSO) requires that all users sign in by using the Microsoft Authenticator app.	<input type="radio"/>	<input type="radio"/>
Authentication is the process of establishing which level of access an authenticated user or service has.	<input type="radio"/>	<input type="radio"/>
Conditional Access uses signals collected from a user during the sign-in process to decide whether to allow or deny access requests.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Single sign-on (SSO) requires that all users sign in by using the Microsoft Authenticator app.	<input type="radio"/>	<input checked="" type="radio"/>
Authentication is the process of establishing which level of access an authenticated user or service has.	<input type="radio"/>	<input checked="" type="radio"/>
Conditional Access uses signals collected from a user during the sign-in process to decide whether to allow or deny access requests.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Single sign-on is an authentication method that allows users to sign in using one set of credentials to login across applications. Single sign-on makes it easier to manage passwords and increases security capabilities.

Authorization is the process of establishing what level of access a legitimate user or service should have.

During sign-in, Conditional Access collects signals from the user, makes decisions based on those signals, and

then enforces that decision by allowing or denying the access request or challenging for a multifactor authentication response.

Question: 309

CertyIQ

What is guaranteed in an Azure Service Level Agreement (SLA) for virtual machines?

- A. uptime
- B. feature availability
- C. bandwidth
- D. performance

Answer: A

Explanation:

The SLA for virtual machines guarantees 'uptime'. The amount of uptime guaranteed depends on factors such as whether the VMs are in an availability set or availability zone if there is more than one VM, the distribution of the VMs if there is more than one or the disk type if it is a single VM.

The SLA for Virtual Machines states:

- ⇒ For all Virtual Machines that have two or more instances deployed across two or more Availability Zones in the same Azure region, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.99% of the time.
- ⇒ For all Virtual Machines that have two or more instances deployed in the same Availability Set or in the same Dedicated Host Group, we guarantee you will have Virtual Machine Connectivity to at least one instance at least 99.95% of the time.
- ⇒ For any Single Instance Virtual Machine using Premium SSD or Ultra Disk for all Operating System Disks and Data Disks, we guarantee you will have Virtual Machine Connectivity of at least 99.9%.

Reference:

<https://azure.microsoft.com/en-us/support/legal/sla/summary/>

https://azure.microsoft.com/en-us/support/legal/sla/virtual-machines/v1_9/

Question: 310

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

An Azure service is available to all Azure customers when it is in

public preview
private preview
development
an Enterprise Agreement (EA) subscription

Answer:

Answer Area

An Azure service is available to all Azure customers when it is in

public preview
private preview
development
an Enterprise Agreement (EA) subscription

Explanation:

Public Preview means that the service is in public beta and can be tried out by anyone with an Azure subscription. Services in public preview are often offered at a discount price.

Public previews are excluded from SLAs and in some cases, no support is offered.

Incorrect Answers:

Services in private preview are available only to selected people who has signed up to the private preview program.

- ⇒ Services in development are not available to the public.
- ⇒ Services provided under an Enterprise Agreement (EA) subscription are available only to the subscription owner.

Reference:

<https://www.neowin.net/news/several-more-azure-services-now-available-in-private-public-preview/>

Question: 311

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to purchase an Azure subscription.

The company's support policy states that the Azure environment must provide an option to access support engineers by phone or email.

You need to recommend which support plan meets the support policy requirement.

Solution: Recommend a Basic support plan.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

B. No

The Basic support plan typically offers limited support, such as access to documentation, community forums, and self-help resources. It does not include technical support for troubleshooting, advisory support, or support for service-level agreements (SLAs). If the support policy requirement includes direct technical support, faster response times, or other advanced support features, a higher-tier plan like Developer, Standard, Professional Direct, or Premier would be more appropriate. Therefore, recommending a Basic support plan does not meet the goal if the requirement includes more comprehensive support services.

The Basic support plan does not have any technical support for engineers.

Access to Support Engineers via email or phone is available in the following support plans: Premier, Professional Direct and standard.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Question: 312

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to purchase an Azure subscription.

The company's support policy states that the Azure environment must provide an option to access support engineers by phone or email.

You need to recommend which support plan meets the support policy requirement.

Solution: Recommend a Standard support plan.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The Standard, Professional Direct, and Premier support plans have technical support for engineers via email and phone.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Question: 313

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to purchase an Azure subscription.

The company's support policy states that the Azure environment must provide an option to access support engineers by phone or email.

You need to recommend which support plan meets the support policy requirement.

Solution: Recommend a Premier support plan.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

The Standard, Professional Direct, and Premier support plans have technical support for engineers via email and phone.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Note:- The question is obsolete. Premier support is retired.

CertyIQ

Your company plans to request an architectural review of an Azure environment from Microsoft.

The company currently has a Basic support plan.

You need to recommend a new support plan for the company. The solution must minimize costs.

Which support plan should you recommend?

A. Premier

B. Developer

C. Professional Direct

D. Standard

Answer: C

Explanation:

Professional Direct provide Guidance from a pool of ProDirect delivery managers. Developer and standard provide general guidance. <https://azure.microsoft.com/en-gb/support/plans/>

CertyIQ

Question: 315

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Most Azure services are introduced in private preview before being introduced in public preview, and then in general availability.	<input type="radio"/>	<input type="radio"/>
Azure services in public preview can be managed only by using the Azure CLI.	<input type="radio"/>	<input checked="" type="radio"/>
The cost of an Azure service in private preview decreases when the service becomes generally available.	<input checked="" type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Most Azure services are introduced in private preview before being introduced in public preview, and then in general availability.	<input checked="" type="radio"/>	<input type="radio"/>
Azure services in public preview can be managed only by using the Azure CLI.	<input type="radio"/>	<input checked="" type="radio"/>
The cost of an Azure service in private preview decreases when the service becomes generally available.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes -

Most services go to private preview then public preview before being released to general availability. The private preview is only available to certain Azure customers for evaluation purposes. The public preview is available to all Azure customers.

Box 2: No -

Azure services in public preview can be managed using the regular management tools: Azure Portal, Azure CLI and PowerShell.

Box 3: No -

Services in private or public preview are usually offered at reduced costs. However, the costs increase, not decrease when the services are released to general availability.

Question: 316

CertyIQ

What is required to use Azure Cost Management?

- A. a Dev/Test subscription
- B. Software Assurance
- C. an Enterprise Agreement (EA)
- D. a pay-as-you-go subscription

Answer: D

Explanation:

D (pay-as-you-go). It also supports EA. The difference is in the kind of data managed in the Cost Management tool.

"Cost Management includes all usage and purchases, including reservations and third-party offerings for Enterprise Agreement (EA) accounts. Microsoft Customer Agreement accounts and individual subscriptions with pay-as-you-go rates only include usage from Azure and Marketplace services. Support and other costs aren't included."

<https://learn.microsoft.com/en-gb/azure/cost-management-billing/costs/understand-cost-mgt-data>

Question: 317

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Your Azure trial account expired last week.

You are now unable to

- Create additional Azure Active Directory (Azure AD) user accounts
- start an existing Azure virtual machine
- access your data stored in Azure
- access the Azure portal

Answer:**Answer Area**

Your Azure trial account expired last week.

You are now unable to

Create additional Azure Active Directory (Azure AD) user accounts
start an existing Azure virtual machine
access your data stored in Azure
access the Azure portal

Explanation:

A stopped (deallocated) VM is offline and not mounted on an Azure host server. Starting a VM mounts the VM on a host server before the VM starts. As soon as the VM is mounted, it becomes chargeable. For this reason, you are unable to start a VM after a trial has expired.

Incorrect Answers:

- ⇒ You are not charged for Azure Active Directory user accounts so you can continue to create accounts.
- ⇒ You can access data that is already stored in Azure.
- ⇒ You can access the Azure Portal. You can also reactivate and upgrade the expired subscription in the portal.

Question: 318**CertyIQ**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to purchase an Azure subscription.

The company's support policy states that the Azure environment must provide an option to access support engineers by phone or email.

You need to recommend which support plan meets the support policy requirement.

Solution: Recommend a Professional Direct support plan.

Does this meet the goal?

A. Yes

B. No

Answer: A**Explanation:**

The Basic support plan does not have any technical support for engineers.

The Developer support plan has only technical support for engineers via email.

The Standard, Professional Direct, and Premier support plans have technical support for engineers via email and phone.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Question: 319**CertyIQ**

Your company has a Software Assurance agreement that includes Microsoft SQL Server licenses. You plan to deploy SQL Server on Azure virtual machines.

What should you do to minimize licensing costs for the deployment?

- A. Deallocate the virtual machines during off hours.
- B. Use Azure Hybrid Benefit.
- C. Configure Azure Cost Management budgets.
- D. Use Azure reservations.

Answer: B

Explanation:

Azure Hybrid Benefit is a licensing benefit that helps you to significantly reduce the costs of running your workloads in the cloud. It works by letting you use your on-premises Software Assurance-enabled Windows Server and SQL Server licenses on Azure.

Reference:

<https://azure.microsoft.com/en-us/pricing/hybrid-benefit/>

CertyIQ

Question: 320

Your company has 10 departments.

The company plans to implement an Azure environment.

You need to ensure that each department can use a different payment option for the Azure services it consumes. What should you create for each department?

- A. a reservation
- B. a subscription
- C. a resource group
- D. a container instance

Answer: B

Explanation:

There are different payment options in Azure including pay-as-you-go (PAYG), Enterprise Agreement (EA), and Microsoft Customer Agreement (MCA) accounts.

Your Azure costs are 'per subscription'. You are charged monthly for all resources in a subscription. Therefore, to use different payment options per department, you will need to create a separate subscription per department. You can create multiple subscriptions in a single Azure Active Directory tenant.

Incorrect Answers:

A: A reservation is where you commit to a resource (for example a virtual machine) for one or three years. This gives you a discounted price on the resource for the reservation period. Reservations do not provide a way to use different payment options per department.

C: A resource group is a logical container for Azure resources. You can view the total cost of all the resources in a resource group. However, resource groups do not provide a way to use different payment options per department.

D: A container instance is an Azure resource used to run an application. Container instances do not provide a way to use different payment options per department.

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/manage/create-subscription>

Question: 323**CertyIQ****HOTSPOT -**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
With a consumption-based plan, you pay a fixed rate for all data sent to or from virtual machines hosted in the cloud.	<input type="radio"/>	<input type="radio"/>
With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

Statements	Yes	No
With a consumption-based plan, you pay a fixed rate for all data sent to or from virtual machines hosted in the cloud.	<input type="radio"/>	<input checked="" type="radio"/>
With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input checked="" type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

1. So for consumption based plan, no fixed rate - N
2. extra capacity only when its required. no fixed rate - Y
3. Y

Question: 324

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
-------------------	------------	-----------

The cost of Azure resources can vary between regions.

An Azure reservation is used to reserve server capacity at a specific data center.

You can stop an Azure SQL Database instance to decrease costs.

Answer:**Answer Area**

Statements	Yes	No
-------------------	------------	-----------

The cost of Azure resources can vary between regions.

An Azure reservation is used to reserve server capacity at a specific data center.

You can stop an Azure SQL Database instance to decrease costs.

Explanation:

Y/Y/N

<https://learn.microsoft.com/en-us/azure/cost-management-billing/reservations/manage-reserved-vm-instance>

If you bought Azure Reserved Virtual Machine Instances, you can change the optimize setting for the reservation. The reservation discount can apply to VMs in the same series or you can reserve data center capacity for a specific VM size. You should try to optimize reservations so that they're fully used.

Question: 325

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You have an application that is comprised of an Azure web app that has a Service Level Agreement (SLA) of 99.95 percent and an Azure SQL database that has an SLA of 99.99 percent.

The composite SLA for the application is

the product of both SLAs, which equals 99.94 percent
the lowest SLA associated to the application, which is 99.95 percent
the highest SLA associated to the application, which is 99.99 percent
the difference between the two SLAs, which is 0.05 percent

Answer:

Answer Area

You have an application that is comprised of an Azure web app that has a Service Level Agreement (SLA) of 99.95 percent and an Azure SQL database that has an SLA of 99.99 percent.

The composite SLA for the application is

the product of both SLAs, which equals 99.94 percent
the lowest SLA associated to the application, which is 99.95 percent
the highest SLA associated to the application, which is 99.99 percent
the difference between the two SLAs, which is 0.05 percent

Explanation:

Composite SLAs involve multiple services supporting an application, each with differing levels of availability. For example, consider an App Service web app that writes to Azure SQL Database. At the time of this writing, these Azure services have the following SLAs:

App Service web apps = 99.95%

SQL Database = 99.99%

What is the maximum downtime you would expect for this application? If either service fails, the whole application fails. The probability of each service failing is independent, so the composite SLA for this application is $99.95\% \times 99.99\% = 99.94\%$. That's lower than the individual SLAs, which isn't surprising because an application that relies on multiple services has more potential failure points.

<https://docs.microsoft.com/en-us/azure/architecture/reliability/requirements#understand-service-level-agreements>

Question: 326

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
The Service Level Agreement (SLA) guaranteed uptime for paid Azure services is at least 99.9 percent.	<input type="radio"/>	<input type="radio"/>
Companies can increase the Service Level Agreement (SLA) guaranteed uptime by adding Azure resources to multiple regions.	<input type="radio"/>	<input type="radio"/>
Companies can increase the Service Level Agreement (SLA) guaranteed uptime by purchasing multiple subscriptions.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
The Service Level Agreement (SLA) guaranteed uptime for paid Azure services is at least 99.9 percent.	<input checked="" type="radio"/>	<input type="radio"/>
Companies can increase the Service Level Agreement (SLA) guaranteed uptime by adding Azure resources to multiple regions.	<input checked="" type="radio"/>	<input type="radio"/>
Companies can increase the Service Level Agreement (SLA) guaranteed uptime by purchasing multiple subscriptions.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes -

SLA's vary based on the resource type and the location distribution of the resource. However, the minimum uptime for all Azure services is 99.9 percent.

Box 2: Yes -

The SLA guaranteed uptime is increased (usually to 99.95 percent) when resources are deployed across multiple regions.

Box 3: No -

The number of subscriptions is unrelated to uptime SLA's. You can deploy resources to multiple regions under

a single subscription or you can have multiple subscriptions with resources deployed to the same region.

Reference:

<https://azure.microsoft.com/en-us/support/legal/sla/summary/>

CertyIQ

Question: 327

Which statement accurately describes the Modern Lifecycle Policy for Azure services?

- A. Microsoft provides mainstream support for a service for five years.
- B. Microsoft provides a minimum of 12 months' notice before ending support for a service.
- C. After a service is made generally available, Microsoft provides support for the service for a minimum of four years.
- D. When a service is retired, you can purchase extended support for the service for up to five years.

Answer: B

Explanation:

For products governed by the Modern Lifecycle Policy, Microsoft will provide a minimum of 12 months' notification prior to ending support if no successor product or service is offered "excluding free services or preview releases.

Reference:

<https://support.microsoft.com/en-us/help/30881/modern-lifecycle-policy>

CertyIQ

Question: 328

HOTSPOT -

You need to request that Microsoft increase a subscription quota limit for your company.

Which blade should you use from the Azure portal? To answer, select the appropriate blade in the answer area.

Hot Area:

Microsoft Azure

 Create a resource

 All services

FAVORITES

 Dashboard

 All resources

 Resource groups

 App Services

 Function Apps

 SQL databases

 Azure Cosmos DB

 Virtual machines

 Load balancers

Answer:

Microsoft Azure

 Create a resource

 All services

 FAVORITES

 Dashboard

 All resources

 Resource groups

 App Services

 Function Apps

 SQL databases

 Azure Cosmos DB

 Virtual machines

 Load balancers

Explanation:

Request a standard quota increase from Help + support

Question: 329

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You can use

Advisor recommendations
Access control (IAM)
Budget alerts
Compliance

in Azure to send email alerts when the cost of the current

billing period for an Azure subscription exceeds a specified limit.

Answer:**Answer Area**

You can use

Advisor recommendations
Access control (IAM)
Budget alerts
Compliance

in Azure to send email alerts when the cost of the current

billing period for an Azure subscription exceeds a specified limit.

Explanation:

Budget alerts notify you when spending, based on usage or cost, reaches or exceeds the amount defined in the alert condition of the budget. Cost Management budgets are created using the Azure portal or the Azure Consumption API.

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/costs/cost-mgt-alerts-monitor-usage-spending>

Question: 330

Question: 331

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
When using an Azure ExpressRoute connection, inbound data traffic from an on-premises network to Azure is always free.	<input type="radio"/>	<input type="radio"/>
Outbound data traffic from Azure to an on-premises network is always free.	<input type="radio"/>	<input type="radio"/>
Data traffic between Azure services within the same Azure region is always free.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
When using an Azure ExpressRoute connection, inbound data traffic from an on-premises network to Azure is always free.	<input checked="" type="radio"/>	<input type="radio"/>
Outbound data traffic from Azure to an on-premises network is always free.	<input type="radio"/>	<input checked="" type="radio"/>
Data traffic between Azure services within the same Azure region is always free.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

With Azure ExpressRoute, all inbound data transfer is free of charge.

Box 2: No -

Inbound data traffic is free but outbound data traffic is not.

Box 3: Yes -

>>>>>>>>>>>>>

1. Yes. You already use and pay ExpressRoute. They just ask if inbound data is free of charge, which it is.

2. No. Outbound data is not free of charge.

3. Yes. Within same region is free.

>>>>>>>>>,>>>>

Reference:

<https://azure.microsoft.com/en-us/pricing/details/expressroute/> [https://azure.microsoft.com/en-](https://azure.microsoft.com/en)

Question: 332

Your company has an Azure subscription that contains the following unused resources:

- ⇒ 20 user accounts in Azure Active Directory (Azure AD)
- ⇒ Five groups in Azure AD
- ⇒ 10 public IP addresses
- ⇒ 10 network interfaces

You need to reduce the Azure costs for the company.

Which unused resources should you remove?

- A. the network interfaces
- B. the public IP addresses
- C. the groups
- D. the user accounts

Answer: B**Explanation:**

You are charged for public IP addresses. Therefore, deleting unused public IP addresses will reduce the Azure costs.

Reference:

<https://docs.microsoft.com/en-us/azure/advisor/advisor-cost-recommendations#reduce-costs-by-deleting-or-reconfiguring-idle-virtual-network-gateways>

Question: 333

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

If an Azure virtual machine has a status of Stopped (deallocated),
you will continue to pay for

▼
compute capacity
I/O operations
networking
storage

Answer:

Answer Area

If an Azure virtual machine has a status of Stopped (deallocated),
you will continue to pay for

▼
compute capacity
I/O operations
networking
storage

Explanation:

When a virtual machine is stopped (deallocated), the virtual machine is unloaded/dismounted from the physical server in Azure. In this state, you are not charged for the virtual machine itself. However, you are still charged for the storage costs of the virtual hard disks attached to the virtual machine.

If the virtual machine is stopped but not deallocated (this happens if you shut down the virtual machine from the operating system of the virtual machine), the virtual machine is still mounted on the physical server in Azure and you are charged for the virtual machine itself as well as the storage costs. To ensure that a virtual machine is 'stopped (deallocated)', you need to stop the virtual machine in the Azure portal.

Reference:

https://blogs.technet.microsoft.com/uspartner_ts2team/2014/10/10/azure-virtual-machines-stopping-versus-stopping-deallocating/

Question: 334

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
Storing 1 TB of data in Azure Blob storage will always cost the same, regardless of the Azure region in which the data is located.	<input type="radio"/>	<input type="radio"/>
When you use a general-purpose v2 Azure Storage account, you are only charged for the amount of data that is stored. All read and write operations are free.	<input type="radio"/>	<input type="radio"/>
Transferring data between Azure Storage accounts in different Azure regions is free.	<input type="radio"/>	<input type="radio"/>

Answer:

Statements	Yes	No
Storing 1 TB of data in Azure Blob storage will always cost the same, regardless of the Azure region in which the data is located.	<input type="radio"/>	<input checked="" type="radio"/>
When you use a general-purpose v2 Azure Storage account, you are only charged for the amount of data that is stored. All read and write operations are free.	<input type="radio"/>	<input checked="" type="radio"/>
Transferring data between Azure Storage accounts in different Azure regions is free.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Inbound is free.

Outbound is paid per GB.

Storage rent is paid per GB/month.

Storage read/write operations are paid.

Box 1: No -

The price of Azure storage varies by region. If you use the Azure storage pricing page, you can select different

regions and see how the price changes per region.

Box 2: No -

You are charged for read and write operations in general-purpose v2 storage accounts.

Box 3: No -

You would be charged for the read operations of the source storage account and write operations in the destination storage account.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview>

<https://azure.microsoft.com/en-gb/pricing/details/storage/blobs/>

Question: 335

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
In Azure Active Directory Premium P2, at least 99.9 percent availability is guaranteed.	<input type="radio"/>	<input type="radio"/>
The Service Level Agreement (SLA) for Azure Active Directory Premium P2 is the same as the SLA for Azure Active Directory Free.	<input type="radio"/>	<input type="radio"/>
All paying Azure customers receive a credit if their monthly uptime percentage is below the guaranteed amount in the Service Level Agreement (SLA).	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
In Azure Active Directory Premium P2, at least 99.9 percent availability is guaranteed.	<input checked="" type="radio"/>	<input type="radio"/>
The Service Level Agreement (SLA) for Azure Active Directory Premium P2 is the same as the SLA for Azure Active Directory Free.	<input type="radio"/>	<input checked="" type="radio"/>
All paying Azure customers receive a credit if their monthly uptime percentage is below the guaranteed amount in the Service Level Agreement (SLA).	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

Microsoft guarantees at least 99.9% availability of the Azure Active Directory Premium edition services. The services are considered available in the following scenarios:

- ⇒ Users are able to log in to the service, log in to the Access Panel, access applications on the Access Panel and reset passwords.
- ⇒ IT administrators are able to create, read, write and delete entries in the directory or provision or de-provision users to applications in the directory.

Box 2: No -

No SLA is provided for the Free tier of Azure Active Directory.

Box 3: Yes -

You can claim credit if the availability falls below the SLA. The amount of credit depends on the availability.

For example: You can claim 25% credit if the availability is less than 99.9%, 50% credit for less than 99% and 100% for less than 95% availability.

Reference:

https://azure.microsoft.com/en-gb/support/legal/sla/active-directory/v1_0/

Question: 336

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Adding resource groups in an Azure subscription generates additional costs.	<input type="radio"/>	<input type="radio"/>
Copying 10 GB of data to Azure from an on-premises network over a VPN generates additional Azure data transfer costs.	<input type="radio"/>	<input type="radio"/>
Copying 10 GB of data from Azure to an on-premises network over a VPN generates additional Azure data transfer costs.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Adding resource groups in an Azure subscription generates additional costs.	<input type="radio"/>	<input checked="" type="radio"/>
Copying 10 GB of data to Azure from an on-premises network over a VPN generates additional Azure data transfer costs.	<input type="radio"/>	<input checked="" type="radio"/>
Copying 10 GB of data from Azure to an on-premises network over a VPN generates additional Azure data transfer costs.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

Resource groups are logical containers for Azure resources. You do not pay for resource groups.

Box 2: No -

Data ingress over a VPN is data 'coming in' to Azure over the VPN. You are not charged data transfer costs for data ingress.

Box 3: Yes -

Data egress over a VPN is data 'going out' of Azure over the VPN. You are charged for data egress.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/manage-resource-groups-portal> <https://azure.microsoft.com/en-us/pricing/details/bandwidth/>

Question: 337

CertyIQ

Who can use the Azure Total Cost of Ownership (TCO) calculator?

- A. billing readers for an Azure subscription only
- B. owners for an Azure subscription only
- C. anyone
- D. all users who have an account in Azure Active Directory (Azure AD) that is linked to an Azure subscription only

Answer: C

Explanation:

You don't need an Azure subscription to work with the TCO Calculator.

Reference:

Question: 338

CertyIQ

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

You deploy an Azure resource. The resource becomes unavailable for an extended period due to a service outage.

Microsoft will

- refund your bank account.
- migrate the resource to another subscription.
- credit your Azure account.
- send you a coupon code that you can redeem for Azure credits.

Answer:

Answer Area

You deploy an Azure resource. The resource becomes unavailable for an extended period due to a service outage.

Microsoft will

- refund your bank account.
- migrate the resource to another subscription.
- credit your Azure account.
- send you a coupon code that you can redeem for Azure credits.

Explanation:

If the SLA for an Azure service is not met, you receive credits for that service and that service only. The credits are deducted from your monthly bill for that service.

If you stopped using the service where the SLA was not met, your account would remain in credit for that service. The credits would not be applied to any other services that you may be using.

Service Credits apply only to fees paid for the particular Service, Service Resource, or Service tier for which a Service Level has not been met. In cases where

Service Levels apply to individual Service Resources or to separate Service tiers, Service Credits apply only to fees paid for the affected Service Resource or

Service tier, as applicable. The Service Credits awarded in any billing month for a particular Service or Service Resource will not, under any circumstance, exceed your monthly service fees for that Service or Service Resource, as applicable, in the billing month.

Reference:

https://azure.microsoft.com/en-gb/support/legal/sla/analysis-services/v1_0/

Question: 339

CertyIQ

Which task can you perform by using Azure Advisor?

- A. Integrate Active Directory and Azure Active Directory (Azure AD).
- B. Estimate the costs of an Azure solution.
- C. Confirm that Azure subscription security follows best practices.
- D. Evaluate which on-premises resources can be migrated to Azure.

Answer: C

Explanation:

Price estimation is provided by pricing calculator

Advisor provides relevant best practices to help you improve reliability, security, and performance, achieve operational excellence, and reduce costs. Configure Advisor to target specific subscriptions and resource groups, to focus on critical optimisations. Access Advisor through the Azure portal, the Azure Command Line Interface (CLI), or the Advisor API. Or configure alerts to notify you automatically about new recommendations.

Question: 340

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

	Yes	No
If your company uses an Azure free account, you will only be able to use a subset of Azure services.	<input type="radio"/>	<input type="radio"/>
All Azure free accounts expire after a specific period.	<input type="radio"/>	<input type="radio"/>
You can create up to 10 Azure free accounts by using the same Microsoft account.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements

	Yes	No
If your company uses an Azure free account, you will only be able to use a subset of Azure services.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
All Azure free accounts expire after a specific period.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
You can create up to 10 Azure free accounts by using the same Microsoft account.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Explanation:

Box 1: Yes

Box 2: Yes -

All free accounts expire after 12 months.

Box 3: No -

You can only create one free Azure account per Microsoft account.

Reference:

<https://azure.microsoft.com/en-us/free/free-account-faq/>

CertyIQ

Question: 341

You have an Azure application that uses the services shown in the following table.

Service	Service Level Agreement (SLA)
Azure virtual machines	99.9%
Azure SQL Database	99.99%

How should you calculate the composite SLA for the application?

- A. $0.999 * 0.9999 = 0.9989001 = 99.89001\%$
- B. $0.999 / 0.9999 = 0.9991 = 99.91\%$
- C. $\text{Max}(0.999, 0.9999) = 0.9999 = 99.99\%$
- D. $\text{Min}(0.999, 0.9999) = 0.999 = 99.9\%$

Answer: A

Explanation:

Composite SLAs involve multiple services supporting an application, each with differing levels of availability.

For example, consider an App Service web app that writes to Azure SQL Database. At the time of this writing, these Azure services have the following SLAs:

- ⇒ App Service web apps = 99.95%
- ⇒ SQL Database = 99.99%

What is the maximum downtime you would expect for this application? If either service fails, the whole application fails. The probability of each service failing is independent, so the composite SLA for this application is $99.95\% \times 99.99\% = 99.94\%$. That's lower than the individual SLAs, which isn't surprising because an application that relies on multiple services has more potential failure points.

CertyIQ

Question: 342

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Azure Container Instances
Azure Reserved Virtual Machine Instances
Azure Spot virtual machine instances
Azure virtual machine scale sets

provide access to unused Azure compute capacity at deep discounts

Answer:

Answer Area

Azure Container Instances
Azure Reserved Virtual Machine Instances
Azure Spot virtual machine instances
Azure virtual machine scale sets

provide access to unused Azure compute capacity at deep discounts

Explanation:

"Azure Spot VM instances" is the answer.

<https://learn.microsoft.com/en-us/azure/virtual-machines/spot-vms>

Using Azure Spot Virtual Machines allows you to take advantage of our unused capacity at a significant cost savings. At any point in time when Azure needs the capacity back, the Azure infrastructure will evict Azure Spot Virtual Machines. Therefore, Azure Spot Virtual Machines are great for workloads that can handle interruptions like batch processing jobs, dev/test environments, large compute workloads, and more.

Reference:

<https://docs.microsoft.com/en-us/shows/azure-videos/virtual-spot-machines-overview>

Question: 343

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

To save on the costs of an unused Azure virtual machine that runs Windows 10, you should

disconnect the virtual machine during a Remote Desktop session
put the virtual machine in sleep mode from a Remote Desktop session
select Stop for the virtual machine from the Azure portal
shut down the virtual machine from a Remote Desktop session

Answer:

Answer Area

To save on the costs of an unused Azure virtual machine that runs Windows 10, you should

- disconnect the virtual machine during a Remote Desktop session
- put the virtual machine in sleep mode from a Remote Desktop session
- select Stop for the virtual machine from the Azure portal**
- shut down the virtual machine from a Remote Desktop session

Explanation:

Select stop for the Virtual machine from the Azure portal.

Shutting down the machine from the OS is not enough, you will still be paying for the Azure VM compute resources (aka hardware allocation).

Question: 344

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

All Azure services that are in public preview are

- provided without any documentation.
- only configurable from Azure CLI.
- excluded from the Service Level Agreements.**
- only configurable from the Azure portal.

Answer:

Answer Area

All Azure services that are in public preview are

- provided without any documentation.
- only configurable from Azure CLI.
- excluded from the Service Level Agreements.**
- only configurable from the Azure portal.

Explanation:

"**excluded from SLA**" is the answer.

<https://azure.microsoft.com/en-us/support/legal/preview-supplemental-terms>

Public preview – During this phase we allow any customer with the proper Azure AD license to evaluate the new feature. Microsoft Customer Support Services will supply support services during this phase, but normal service level agreements do not apply.

Public preview " During this phase we allow any customer with the proper Azure AD license to evaluate the new feature. Microsoft Customer Support Services will supply support services during this phase, but normal service level agreements do not apply.

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

You can access Compliance Manager from the

Azure Active Directory admin center
Azure portal
Microsoft 365 admin center
Microsoft Service Trust Portal

Answer:

Answer Area

You can access Compliance Manager from the

Azure Active Directory admin center
Azure portal
Microsoft 365 admin center
Microsoft Service Trust Portal

Explanation:

Box: Microsoft 365 admin center -

1. Go to the Microsoft 365 compliance center and sign in with your Microsoft 365 global administrator account.
2. Select Compliance Manager on the left navigation pane. You'll arrive at your Compliance Manager dashboard.

Note:- Compliance Manager has moved from the Service Trust Portal to the Microsoft Purview compliance portal.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/compliance-manager-setup>

CertyIQ

Question: 348

You have 1,000 virtual machines hosted on the Hyper-V hosts in a data center.

You plan to migrate all the virtual machines to an Azure pay-as-you-go subscription.

You need to identify which expenditure model to use for the planned Azure solution.

Which expenditure model should you identify?

- A. scalable
- B. operational
- C. elastic
- D. capital

Answer: B

Explanation:

One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it). This switch also requires more careful management of your costs. The benefit of the cloud is that you can fundamentally and positively affect the cost of a service you use by merely shutting down or resizing it when it's not needed.

Reference:

<https://docs.microsoft.com/en-us/azure/architecture/cloud-adoption/appendix/azure-scaffold>

Question: 349

CertyIQ

HOTSPOT -

Answer Area

Statements	Yes	No
A company has complete control of the resources and security for its private cloud.	<input type="radio"/>	<input type="radio"/>
A hybrid cloud solution enables a company to control whether its applications run on-premises or in the cloud.	<input type="radio"/>	<input type="radio"/>
Companies are responsible for capital expenditure when they scale up a virtual machine hosted in a public cloud.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A company has complete control of the resources and security for its private cloud.	<input checked="" type="radio"/>	<input type="radio"/>
A hybrid cloud solution enables a company to control whether its applications run on-premises or in the cloud.	<input checked="" type="radio"/>	<input type="radio"/>
Companies are responsible for capital expenditure when they scale up a virtual machine hosted in a public cloud.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

A company has complete control of the resources and security for its private cloud - **Yes**

A Hybrid Cloud solution enables a company to control whether its applications run on-premises or in the cloud
- **Yes**

Explanation: Hybrid cloud computing enables an enterprise to deploy its most sensitive workloads in an on-premises cloud and to host less-critical resources on a third-party public cloud provider. This approach allows organizations to get the best of both private and public cloud models.

Companies are responsible for capital expenditure when they scale up a virtual machine hosted in a public cloud - **No**

Explanation: With the public cloud, you get pay-as-you-go pricing – you pay only for what you use, no CapEx costs.

Question: 351

CertyIQ

Which Service Level Agreement (SLA) is provided for Azure services in public preview?

- A. Each service defines its own SLA
- B. The SLA will be 99%
- C. The SLA will be 1% less than the general availability (GA) SLA
- D. The SLA will be 99.95%

Answer: A

Explanation:

Microsoft Customer Support Services will supply support services during this phase, but normal service level agreements do not apply

<https://azure.microsoft.com/en-us/support/legal/preview-supplemental-terms/#:~:text=Public%20preview%20E2%80%93%20During%20this%20phase%20we%20allow%20any%20cu>

Question: 352

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

Application rules
Network Address Translation (NAT) rules
Network rules
Service tags

in Azure Firewall enables users on the internet to access a server on a virtual network.

Answer:

Answer Area

Application rules
Network Address Translation (NAT) rules
Network rules
Service tags

in Azure Firewall enables users on the internet to access a server on a virtual network.

Explanation:

"NAT rules" is the answer.

<https://learn.microsoft.com/en-us/azure/firewall/policy-rule-sets#dnat-rules>

DNAT rules allow or deny inbound traffic through the firewall public IP address(es). You can use a DNAT rule when you want a public IP address to be translated into a private IP address. The Azure Firewall public IP addresses can be used to listen to inbound traffic from the Internet, filter the traffic and translate this traffic to internal resources in Azure.

Question: 353

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
The cost of outbound traffic from Azure is the same for all Azure regions.	<input type="radio"/>	<input type="radio"/>
Purchasing Azure services through an Enterprise Agreement (EA) requires you to spend a predetermined amount.	<input type="radio"/>	<input type="radio"/>
Microsoft defines the pricing structure of all third-party services sold through Azure Marketplace.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
The cost of outbound traffic from Azure is the same for all Azure regions.	<input type="radio"/>	<input checked="" type="radio"/>
Purchasing Azure services through an Enterprise Agreement (EA) requires you to spend a predetermined amount.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft defines the pricing structure of all third-party services sold through Azure Marketplace.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

Within most of the areas, there are clearly more expensive regions and less expensive regions.

The least expensive regions, on average across these instance types are us-west-2, us-west-central, and korea-south.

The most expensive regions are asia-pacific-east, japan-east, and australia-east.

Box 2: Yes -

Many organizations with Microsoft Enterprise Agreements (EA) are adding Azure to their EA to enjoy the benefits it offers, such as:

Minimizing Azure upfront costs by locking in pricing with consumption pre-commitment

Using Azure EA Portal to manage Azure Subscriptions easily and organize them under a single billing account

Box 3: No

The commercial marketplace operates on an agency model, whereby publishers set prices, Microsoft bills customers, and Microsoft pays revenue to publishers while withholding an agency fee.

Question: 354

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Pay-As-You-Go (PAYG) is a consumption-based model.	<input type="radio"/>	<input type="radio"/>
Payments to cloud service providers are considered capital expenditures (CapEx).	<input type="radio"/>	<input type="radio"/>
The services provided through a consumption-based model are considered operational expenditures (OpEx).	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Pay-As-You-Go (PAYG) is a consumption-based model.	<input checked="" type="radio"/>	<input type="radio"/>
Payments to cloud service providers are considered capital expenditures (CapEx).	<input type="radio"/>	<input checked="" type="radio"/>
The services provided through a consumption-based model are considered operational expenditures (OpEx).	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

The Pay as You Go model is billed on a per second basis and you can start or stop the service at any time " paying only for what you use.

Box 2: No -

No, it is OpEx (Operational Expenditures).

OpEx: The business can achieve ROI immediately in many cases because the infrastructure is managed by the cloud provider.

CapEx: ROI is not usually realized until a long time after the purchase was made because the infrastructure needs to be set up and employees need to be trained.

Computers, servers, and other hardware needed for on-premises data centers are all examples of CapEx.

Box 3: Yes -

Operational Expenditures (OpEx) are the ongoing costs related to day-to-day operations. A subscription fee for cloud services is considered OpEx"the cloud provider is making the infrastructure investment upfront, and you only pay for the resources you need as you need them.

Reference:

<https://azure.microsoft.com/en-us/pricing/purchase-options/pay-as-you-go/> <https://blogs.vmware.com/cloud-health/capex-vs-opex-cloud-cost-management/>

Question: 355

CertyIQ

What is the longest term you can purchase for Azure Reserved VM instances?

- A. one year
- B. five years
- C. four years
- D. three years

Answer: D

Explanation:

Azure Reservations help you save money by committing to one-year or three-year plans for multiple products. Committing allows you to get a discount on the resources you use. Reservations can significantly reduce your resource costs by up to 72% from pay-as-you-go prices.

Reference:

<https://docs.microsoft.com/en-us/azure/cost-management-billing/reservations/save-compute-costs-reservations>

Question: 356

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
All Azure services in private preview must be accessed by using a separate Azure portal.	<input type="radio"/>	<input type="radio"/>
Azure services in public preview can be used in production environments.	<input type="radio"/>	<input type="radio"/>
Azure services in public preview are subject to a Service Level Agreement (SLA).	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
All Azure services in private preview must be accessed by using a separate Azure portal.	<input type="radio"/>	<input checked="" type="radio"/>
Azure services in public preview can be used in production environments.	<input checked="" type="radio"/>	<input type="radio"/>
Azure services in public preview are subject to a Service Level Agreement (SLA).	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Public Preview means that the service is in public beta and can be tried out by anyone with an Azure subscription. Services in public preview are often offered at a discount price.

Box 1: No -

Services in private preview can be viewed in the regular Azure portal. However, you need to be signed up for the feature in private preview before you can view it.

Access to private preview features is usually by invitation only.

Box 2: Yes -

You can use services in public preview in production environments. However, you should be aware that the service may have faults, is not subject to an SLA and may be withdrawn without notice.

Box 3: No -

Public previews are excluded from SLAs and in some cases, no support is offered.

Reference:

<https://www.neowin.net/news/several-more-azure-services-now-available-in-private-public-preview/>

Question: 357

CertyIQ

Your company has 10 offices. You plan to generate several billing reports from the Azure portal. Each report will contain the Azure resource utilization of each office.

Which Azure Resource Manager feature should you use before you generate the reports?

- A. tags
- B. templates
- C. locks
- D. policies

Answer: A

Explanation:

You can use resource tags to 'label' Azure resources. Tags are metadata elements attached to resources. Tags consist of pairs of key/value strings. In this question, we would tag each resource with a tag to identify each office. For example: Location = Office1. When all Azure resources are tagged, you can generate reports to list all resources based on the value of the tag. For example: All resources used by Office1.

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/decision-guides/resource-tagging/>

CertyIQ

Question: 358

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A Standard support plan is included in an Azure free account.	<input type="radio"/>	<input type="radio"/>
A Premier support plan can only be purchased by companies that have an Enterprise Agreement (EA).	<input type="radio"/>	<input type="radio"/>
Support from MSDN forums is only provided to companies that have a pay-as-you-go subscription.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A Standard support plan is included in an Azure free account.	<input type="radio"/>	<input checked="" type="radio"/>
A Premier support plan can only be purchased by companies that have an Enterprise Agreement (EA).	<input checked="" type="radio"/>	<input type="radio"/>
Support from MSDN forums is only provided to companies that have a pay-as-you-go subscription.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No -

An Azure free account comes with a 'basic' support plan, not a 'standard' support plan.

Box 2: Yes -

You can purchase the Professional Direct, Standard, and Developer support plans with the Microsoft Customer Agreement. You can also purchase the Professional and Standard support plans with the Enterprise Agreement.

Box 3: No -

Users with any type of Azure subscription (pay-as-you-go, Enterprise Agreement, Microsoft Customer Agreement etc.) can get support from the MSDN forums.

Reference:

<https://azure.microsoft.com/en-us/support/plans/>

Question: 359**CertyIQ**

This question requires that you evaluate the underlined text to determine if it is correct.

If Microsoft plans to end support for an Azure service that does NOT have a successor service, Microsoft will provide notification at least 12 months before.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. 6 months
- C. 90 days
- D. 30 days

Answer: A**Explanation:**

The Modern Lifecycle Policy covers products and services that are serviced and supported continuously. For products governed by the Modern Lifecycle Policy,

Microsoft will provide a minimum of 12 months' notification prior to ending support if no successor product or service is offered"excluding free services or preview releases.

Reference:

<https://support.microsoft.com/en-us/help/30881>

Question: 360**CertyIQ**

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
A user who is assigned the Owner role can transfer ownership of an Azure subscription.	<input type="radio"/>	<input type="radio"/>
You can convert the Azure subscription of your company from Free Trial to Pay-As-You-Go.	<input type="radio"/>	<input type="radio"/>
The Azure spending limit is fixed and cannot be increased or decreased.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
A user who is assigned the Owner role can transfer ownership of an Azure subscription.	<input type="radio"/>	<input checked="" type="radio"/>
You can convert the Azure subscription of your company from Free Trial to Pay-As-You-Go.	<input checked="" type="radio"/>	<input type="radio"/>
The Azure spending limit is fixed and cannot be increased or decreased.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: No -

You need to be an administrator of the billing account that has the subscription to be able to transfer the subscription. This could be a Billing Administrator or Global Administrator. A subscription owner can manage all resources and permissions within the subscription but cannot transfer ownership of the subscription.

Box 2: Yes -

You can convert a free trial subscription to Pay-As-You-Go. This is common practice for people who wish to continue using the Azure services when the free trial period expires.

Box 3: Yes -

You can remove the spending limit, but you can't increase or decrease it.

The spending limit in Azure prevents spending over your credit amount. All new customers who sign up for an Azure free account or subscription types that include credits over multiple months have the spending limit turned on by default. The spending limit is equal to the amount of credit and it can't be changed. For example, if you signed up for Azure free account, your spending limit is \$200 and you can't change it to \$500. However, you can remove the spending limit. So, you either have no limit, or you have a limit equal to the amount of credit.

Reference:

<https://docs.microsoft.com/en-us/azure/billing/billing-add-change-azure-subscription-administrator> <https://docs.microsoft.com/en-us/azure/billing/billing-upgrade-azure-subscription> <https://docs.microsoft.com/en-us/azure/billing/billing-spending-limit>

Question: 361

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
With Azure Reservations, you pay less for virtual machines than with pay-as-you-go pricing.	<input type="radio"/>	<input checked="" type="radio"/>
Two Azure virtual machines that use the B2S size have the same monthly costs.	<input checked="" type="radio"/>	<input type="radio"/>
When an Azure virtual machine is stopped, you continue to pay storage costs for the virtual machine.	<input type="radio"/>	<input checked="" type="radio"/>

Answer:

Answer Area

Statements	Yes	No
With Azure Reservations, you pay less for virtual machines than with pay-as-you-go pricing.	<input checked="" type="radio"/>	<input type="radio"/>
Two Azure virtual machines that use the B2S size have the same monthly costs.	<input type="radio"/>	<input checked="" type="radio"/>
When an Azure virtual machine is stopped, you continue to pay storage costs for the virtual machine.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes -

A reservation is where you commit to pay for a resource (for example a virtual machine) for one or three years. This gives you a discounted price on the resource for the reservation period.

Box 2: No -

There are other factors that influence the cost of a virtual machine such as the virtual hard disks attached to the virtual machine. You could have multiple virtual machines with the same 'size' (B2S in this case) but with different virtual hard disk configurations.

Box 3: Yes -

When a virtual machine is stopped (deallocated), the virtual machine is unloaded/dismounted from the physical server in Azure. In this state, you are not charged for the virtual machine itself. However, you are still charged for the storage costs of the virtual hard disks attached to the virtual machine.

If the virtual machine is stopped but not deallocated (this happens if you shut down the virtual machine from the operating system of the virtual machine), the virtual machine is still mounted on the physical server in Azure and you are charged for the virtual machine itself as well as the storage costs. To ensure that a virtual machine is 'stopped (deallocated)', you need to stop the virtual machine in the Azure portal.

Reference:

<https://azure.microsoft.com/en-us/reservations/>

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/b-series-burstable> https://blogs.technet.microsoft.com/uspartner_ts2team/2014/10/10/azure-virtual-machines-stopping-versus-stopping-deallocating/

Question: 362

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an Azure subscription that contains the following unused resources:

- ⇒ 20 user accounts in Azure Active Directory (Azure AD)
- ⇒ Five groups in Azure AD
- ⇒ 10 public IP addresses

⇒ 10 network interfaces

You need to reduce the Azure costs for the company.

Solution: You remove the unused network interfaces.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

You are not charged for unused network interfaces. Therefore, deleting unused network interfaces will not reduce the Azure costs for the company.

Reference:

<https://docs.microsoft.com/en-us/azure/advisor/advisor-cost-recommendations#reduce-costs-by-deleting-or-reconfiguring-idle-virtual-network-gateways>

Question: 363

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an Azure subscription that contains the following unused resources:

⇒ 20 user accounts in Azure Active Directory (Azure AD)

Five groups in Azure AD -

■ ⇒ 10 public IP addresses
⇒ 10 network interfaces

You need to reduce the Azure costs for the company.

Solution: You remove the unused public IP addresses.

Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

You are charged for public IP addresses. Therefore, deleting unused public IP addresses will reduce the Azure costs.

Reference:

<https://docs.microsoft.com/en-us/azure/advisor/advisor-cost-recommendations#reduce-costs-by-deleting-or-reconfiguring-idle-virtual-network-gateways>

Question: 364

CertyIQ

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an Azure subscription that contains the following unused resources:

- ⇒ 20 user accounts in Azure Active Directory (Azure AD)
- ⇒ Five groups in Azure AD
- ⇒ 10 public IP addresses
- ⇒ 10 network interfaces

You need to reduce the Azure costs for the company.

Solution: You remove the unused user accounts.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

You are not charged for user accounts. Therefore, deleting unused user accounts will not reduce the Azure costs for the company.

Reference:

Question: 365

CertyIQ

HOTSPOT -

How should you calculate the monthly uptime percentage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Downtime in Minutes	▼	+	60	▼	x	100	▼
Maximum Available Minutes	▼	1,440	99.99	▼	1.440	1.440	▼
(Maximum Available Minutes – Downtime in Minutes)				Maximum Available Minutes			

Answer:

Answer Area

Downtime in Minutes	▼	+	60	▼	x	100	▼
Maximum Available Minutes	▼	1,440	99.99	▼	1.440	1.440	▼
(Maximum Available Minutes – Downtime in Minutes)				Maximum Available Minutes			

Explanation:

"Maximum Available Minutes" is the total accumulated minutes during a billing month .

"Downtime" is the total accumulated minutes that are part of Maximum Available Minutes where a system is unavailable.

"Monthly Uptime Percentage" for a service is calculated as Maximum Available Minutes less Downtime divided by Maximum Available Minutes x 100.

Monthly Uptime Percentage is represented by the following formula:

Monthly Uptime % = (Maximum Available Minutes-Downtime) / Maximum Available Minutes x 100.

Reference:

https://azure.microsoft.com/en-au/support/legal/sla/cloud-services/v1_0/

Question: 366

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
-------------------	------------	-----------

By creating additional resource groups in an Azure subscription, additional costs are incurred.

<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------

By copying several gigabits of data to Azure from an on-premises network over a VPN, additional data transfer costs are incurred.

<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------

By copying several GB of data from Azure to an on-premises network over a VPN, additional data transfer costs are incurred.

<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------

Answer:

Answer Area

Statements	Yes	No
-------------------	------------	-----------

By creating additional resource groups in an Azure subscription, additional costs are incurred.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

By copying several gigabits of data to Azure from an on-premises network over a VPN, additional data transfer costs are incurred.

<input type="radio"/>	<input checked="" type="radio"/>
-----------------------	----------------------------------

By copying several GB of data from Azure to an on-premises network over a VPN, additional data transfer costs are incurred.

<input checked="" type="radio"/>	<input type="radio"/>
----------------------------------	-----------------------

Explanation:

Box 1: No -

Resource groups are logical containers for Azure resources. You do not pay for resource groups.

Box 2: No -

Data ingress over a VPN is data 'coming in' to Azure over the VPN. You are not charged data transfer costs for data ingress.

Box 3: Yes -

Data egress over a VPN is data 'going out' of Azure over the VPN. You are charged for data egress.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/manage-resource-groups-portal> <https://azure.microsoft.com/en-us/pricing/details/bandwidth/>

Question: 367

CertyIQ

This question requires that you evaluate the underlined text to determine if it is correct.

A support plan solution that gives you best practice information, health status and notifications, and 24/7 access to billing information at the lowest possible cost is a Standard support plan.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Developer
- C. Basic
- D. Premier

Answer: C

Explanation:

A basic support plan provides:

- ⇒ 24x7 access to billing and subscription support, online self-help, documentation, whitepapers, and support forums
- ⇒ Best practices: Access to full set of Azure Advisor recommendations
- ⇒ Health Status and Notifications: Access to personalized Service Health Dashboard & Health API

Reference:

<https://azure.microsoft.com/en-us/support/plans/>

Question: 368

CertyIQ

In which Azure support plans can you open a new support request?

- A. Premier and Professional Direct only
- B. Premier, Professional Direct, and Standard only
- C. Premier, Professional Direct, Standard, and Developer only
- D. Premier, Professional Direct, Standard, Developer, and Basic

Answer: D

Explanation:

You can submit support request tickets in the following plans: Premier, Professional Direct, Standard, Developer, and Basic.

Reference:

<https://azure.microsoft.com/en-us/support/plans/>

CertyIQ

Question: 369

This question requires that you evaluate the underlined text to determine if it is correct.

You can create an Azure support request from support.microsoft.com.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed.' If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. the Azure portal
- C. the Knowledge Center
- D. the Security & Compliance admin center

Answer: B

Explanation:

You can create an Azure support request from the Help and Support blade in the Azure portal or from the context menu of an Azure resource in the Support + Troubleshooting section.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-supportability/how-to-create-azure-support-request>

CertyIQ

Question: 370

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an Azure subscription that contains the following unused resources:

- ⇒ 20 user accounts in Azure Active Directory (Azure AD)
- ⇒ Five groups in Azure AD
- ⇒ 10 public IP addresses
- ⇒ 10 network interfaces

You need to reduce the Azure costs for the company.

Solution: You remove the unused groups.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

You are not charged for Azure Active Directory Groups. Therefore, deleting unused groups will not reduce your Azure costs.

Reference:

Question: 371

This question requires that you evaluate the underlined text to determine if it is correct.

The Azure Standard support plan is the lowest cost option to receive 24x7 access to support engineers by phone.

Instructions: Review the underlined text. If it makes the statement correct, select 'No change is needed'. If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Developer
- C. Basic
- D. Professional Direct

Answer: A

Explanation:

The Basic support plan is free so is therefore the cheapest. The Developer support plan is the cheapest paid-for support plan. The order of support plans in terms of cost ranging from the cheapest to most expensive is: Basic, Developer, Standard, Professional Direct, Premier.

However, 24/7 access to technical support by email and phone is only available for Standard, Professional Direct, Premier plans.

Reference:

<https://azure.microsoft.com/en-gb/support/plans/>

Question: 372

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

All Azure services that are in public preview are

- provided without any documentation
- only configurable from Azure CLI
- excluded from the Service Level Agreements
- only configurable from the Azure portal

Answer:

Answer Area

All Azure services that are in public preview are

- provided without any documentation
- only configurable from Azure CLI
- excluded from the Service Level Agreements**
- only configurable from the Azure portal

Explanation:

Preview features are made available to you on the condition that you accept additional terms which supplement the regular Azure terms. The supplemental terms state:
PREVIEWS ARE PROVIDED "AS-IS," "WITH ALL FAULTS," AND "AS AVAILABLE," AND ARE EXCLUDED FROM THE SERVICE LEVEL AGREEMENTS AND LIMITED WARRANTY.

Reference:

<https://azure.microsoft.com/en-gb/support/legal/preview-supplemental-terms/>

Question: 373

CertyIQ

HOTSPOT -

Select the answer that correctly completes the sentence.

Hot Area:

Answer Area

<input checked="" type="checkbox"/>	The Azure Migrate: Server Assessment tool
<input type="checkbox"/>	The Azure Total Cost of Ownership (TCO) calculator
<input type="checkbox"/>	The Database Migration Assistant
<input type="checkbox"/>	The pricing calculator in Azure

can calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

Answer:

Answer Area

<input checked="" type="checkbox"/>	The Azure Migrate: Server Assessment tool
<input type="checkbox"/>	The Azure Total Cost of Ownership (TCO) calculator
<input type="checkbox"/>	The Database Migration Assistant
<input type="checkbox"/>	The pricing calculator in Azure

can calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

Explanation:

"Azure TCO calculator" is the answer.

<https://learn.microsoft.com/en-us/training/modules/describe-cost-management-azure/3-compare-pricing->

total-cost-of-ownership-calculators

The TCO calculator is designed to help you compare the costs for running an on-premises infrastructure compared to an Azure Cloud infrastructure. With the TCO calculator, you enter your current infrastructure configuration, including servers, databases, storage, and outbound network traffic. The TCO calculator then compares the anticipated costs for your current environment with an Azure environment supporting the same infrastructure requirements.

Reference:

<https://docs.microsoft.com/en-us/learn/modules/plan-manage-azure-costs/2-compare-costs-tco-calculator>

Question: 374

CertyIQ

You need to compare a company's cloud usage to industry standard best practices.
What should you use?

- A. Azure Monitor
- B. Azure Service Health
- C. Application Insights in Azure Monitor
- D. Azure Advisor

Answer: D

Explanation:

D- "As your personalized cloud consultant, Azure Advisor continually assesses your usage telemetry and resource configuration to check for industry best practices." <https://learn.microsoft.com/en-us/azure/advisor/azure-advisor-score>

Question: 375

CertyIQ

You need to start Azure Cloud Shell.
What should you use?

- A. the Azure portal
- B. Azure Command-Line Interface (CLI)
- C. Azure PowerShell
- D. an Azure Resource Manager (ARM) template

Answer: A

Explanation:

Azure Cloud Shell is an interactive, authenticated, browser-accessible shell for managing Azure resources. It provides the flexibility of choosing the shell experience that best suits the way you work, either Bash or PowerShell.

You can access Cloud Shell in three ways:

- Direct link: Open a browser to <https://shell.azure.com>.
- Azure portal: Select the Cloud Shell icon on the Azure portal

- Code samples: In Microsoft technical documentation and training resources, select the Try It button that appears with Azure CLI and Azure PowerShell code snippets

<https://learn.microsoft.com/en-us/azure/cloud-shell/overview>

Question: 376

CertyIQ

How many copies of data are maintained by an Azure Storage account that uses locally-redundant storage (LRS)?

- A. 3
- B. 4
- C. 6
- D. 9

Answer: A

Explanation:

<https://learn.microsoft.com/en-us/azure/storage/common/storage-redundancy#locally-redundant-storage>

Locally redundant storage (LRS) replicates your storage account three times within a single data center in the primary region. LRS provides at least 99.999999999% (11 nines) durability of objects over a given year.

Question: 377

CertyIQ

What enables a cloud service to adapt quickly to changing requirements?

- A. high availability
- B. predictability
- C. manageability
- D. agility

Answer: D

Explanation:

D is correct. Agility: The ability to react quickly. Cloud services can allocate and deallocate resources quickly. They are provided on-demand via self-service, so vast amounts of computing resources can be provisioned in minutes. There is no manual intervention in provisioning or deprovisioning services.

Question: 378

CertyIQ

What is an example of vertical scaling in a cloud environment?

- A. adding an additional CPU to an existing Azure virtual machine
- B. adding an additional Azure virtual machine
- C. adding an additional Azure Virtual Desktop session host
- D. adding an additional Azure App Service instance automatically

Answer: A**Explanation:**

Vertical scaling, also known as scaling up or scaling out, is the process of increasing the capacity of a single resource, such as a virtual machine or a database, to meet the demands of a workload. This can be done by adding more resources to the existing resource, such as additional CPUs, memory, or storage.

An example of vertical scaling in a cloud environment is adding an additional CPU to an existing Azure virtual machine. This can be done by modifying the VM's size or configuration to include more CPUs, which will allow it to handle a larger workload or more concurrent requests.

Other examples of vertical scaling in a cloud environment include adding more memory to a database server, or increasing the capacity of a storage volume.

Vertical scaling is typically used to address short-term or temporary increases in workload demand, and is often a faster and simpler way to scale a resource than horizontal scaling, which involves adding additional instances of a resource.

Question: 379**CertyIQ**

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Microsoft Defender for Cloud can monitor Azure resources and on-premises resources.	<input type="radio"/>	<input type="radio"/>
All Microsoft Defender for Cloud features are free.	<input type="radio"/>	<input type="radio"/>
For Microsoft Defender for Cloud, you can download a Regulatory Compliance report.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Microsoft Defender for Cloud can monitor Azure resources and on-premises resources.	<input checked="" type="radio"/>	<input type="radio"/>
All Microsoft Defender for Cloud features are free.	<input type="radio"/>	<input checked="" type="radio"/>
For Microsoft Defender for Cloud, you can download a Regulatory Compliance report.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: YES

"Microsoft Defender for Cloud is a Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platform (CWPP) for all of your Azure, on-premises, and multicloud (Amazon AWS and Google GCP) resources." First sentence from <https://docs.microsoft.com/en-us/azure/defender-for-cloud/defender-for-cloud-introduction>. So first answer should be YES.

Box 2: NO

Defender for Cloud includes Foundational CSPM capabilities for free. You can also enable advanced CSPM capabilities by enabling the Defender CSPM plan.

This means that foundational features are free and Advanced features come as a cost. This negates the statement as clearly not "all Microsoft Defender for cloud features are free"

Box 3: YES

Now in Microsoft Defender for Cloud, you can easily create & download Audit reports for Regulatory Compliance Standards.

Question: 380

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Cloud computing offers lower capital expenditure (CAPEX) costs than on-premises deployments.	<input type="radio"/>	<input type="radio"/>
Cloud computing provides the same configuration options as on-premises deployments.	<input type="radio"/>	<input type="radio"/>
Cloud computing can scale when a business requires change.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Cloud computing offers lower capital expenditure (CAPEX) costs than on-premises deployments.	<input checked="" type="radio"/>	<input type="radio"/>
Cloud computing provides the same configuration options as on-premises deployments.	<input checked="" type="radio"/>	<input type="radio"/>
Cloud computing can scale when a business requires change.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Y- Capital expenditures (CapEx) are funds used by a company to acquire, upgrade, and maintain physical assets such as property, plants, buildings, technology, or equipment. These costs are lower in cloud computing than in on-premises deployments.

Y- Cloud computing in general provides the same configuration options as on-premises deployments. If you compare a specific product such as Exchange Online vs. Exchange Server or Azure SQL vs. SQL Server this might not be true. But, you could install Exchange Server on a virtual machine in the cloud to get the same configuration options.

Y- Cloud computing allows to increase or decrease IT resources as needed to meet changing demand. Scalability is one of the hallmarks of the cloud and the primary driver of its exploding popularity with businesses.

Question: 381

CertyIQ

What additional resource is required by an Azure virtual machine?

- A. a virtual network
- B. a service endpoint
- C. Azure Firewall
- D. a public IP address

Answer: A**Explanation:**

A- Virtual Network is a mandatory resource required by Azure VM Public IP is an additional option for VM.
Keyword is "additional resource"

Question: 382

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure Functions is an example of a platform as a service (PaaS) cloud service model.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 is an example of a software as a service (SaaS) cloud service model.	<input type="radio"/>	<input type="radio"/>
An Azure virtual machine is an example of an infrastructure as a service (IaaS) cloud service model.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Functions is an example of a platform as a service (PaaS) cloud service model.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 is an example of a software as a service (SaaS) cloud service model.	<input checked="" type="radio"/>	<input type="radio"/>
An Azure virtual machine is an example of an infrastructure as a service (IaaS) cloud service model.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Yes

Yes

Yes

Azure Functions is the new kid on the block in the Azure platform. It's a key ingredient of serverless compute that's needed to achieve the benefits of a cloud PaaS implementation. Azure Functions turns the focus to the value of the code and away from managing infrastructure.

<https://learn.microsoft.com/en-us/archive/msdn-magazine/2017/february/azure-serverless-architecture-with-azure-functions>

Question: 383

CertyIQ

How many copies of data are maintained by an Azure Storage account that uses geo-redundant storage (GRS)?

- A. 3
- B. 4
- C. 6
- D. 9

Answer: C

Explanation:

C is correct: <https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy#geo-redundant-storage> "Geo-redundant storage (GRS) copies your data synchronously three times within a single physical location in the primary region using LRS. It then copies your data asynchronously to a single physical location in a secondary region that is hundreds of miles away from the primary region."

Question: 384

CertyIQ

What is used to grant permission to Azure Virtual Desktop resources?

- A. tags
- B. role-based access control (RBAC) roles
- C. resource groups
- D. application security groups

Answer: B

Explanation:

In Azure, you can use role-based access control (RBAC) to grant permissions to Azure Virtual Desktop resources. RBAC is a system that allows you to manage access to Azure resources based on roles.

In RBAC, you can define roles that represent a set of permissions, and then assign those roles to users or groups. For example, you can create a role that allows users to view and manage Azure Virtual Desktop resources, and then assign that role to a group of users who need to access those resources.

Question: 385

CertyIQ

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Azure virtual networks deployed to the same Azure region are connected by default.	<input type="radio"/>	<input type="radio"/>
Virtual networks created in the same resource group must have unique names.	<input type="radio"/>	<input type="radio"/>
The Azure virtual network's address space must be unique within a subscription.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure virtual networks deployed to the same Azure region are connected by default.	<input type="radio"/>	<input checked="" type="radio"/>
Virtual networks created in the same resource group must have unique names.	<input checked="" type="radio"/>	<input type="radio"/>
The Azure virtual network's address space must be unique within a subscription.	<input checked="" type="radio"/>	<input type="radio"/>

DRAG DROP

Match the cloud computing benefits to the appropriate requirements.

To answer, drag the appropriate benefit from the column on the left to its requirement on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Benefits	Answer Area
Disaster recovery	Benefit Provide a continuous user experience in the event of a resource failure.
Geo-distribution	Benefit Deploy apps and data to regional data centers that are located close to users.
High availability	Benefit Compute capacity can be increased dynamically by adding RAM or CPU to a virtual machine.
Scalability	

Answer:

Answer Area

High availability Provide a continuous user experience in the event of a resource failure.

Geo-distribution Deploy apps and data to regional data centers that are located close to users.

Scalability Compute capacity can be increased dynamically by adding RAM or CPU to a virtual machine.

Explanation:

High availability

When you're deploying an application, a service, or any IT resources, it's important the resources are available when needed. High availability focuses on ensuring maximum availability, regardless of disruptions or events that may occur.

Scalability

Another major benefit of cloud computing is the scalability of cloud resources. Scalability refers to the ability to adjust resources to meet demand. If you suddenly experience peak traffic and your systems are overwhelmed, the ability to scale means you can add more resources to better handle the increased demand.

Question: 387

CertyIQ

DRAG DROP

Match the Azure services to the appropriate descriptions.

To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Services	Answer Area
ExpressRoute	Extends on-premises networks to the Microsoft cloud via a private connection: <input type="text"/>
Virtual network peering	Combines two or more Azure virtual networks into a single logical virtual network: <input type="text"/>
VPN gateway	Provides an encrypted connection from on-premises networks to Azure via a public network: <input type="text"/>

Answer:

Answer Area

Extends on-premises networks to the Microsoft cloud via a private connection: ExpressRoute

Combines two or more Azure virtual networks into a single logical virtual network: Virtual network peering

Provides an encrypted connection from on-premises networks to Azure via a public network: VPN gateway

Question: 388

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

ensures that you can calculate how much a cloud service will cost.

- Agility
- Elasticity
- High availability
- Predictability

Answer:

Answer Area

ensures that you can calculate how much a cloud service will cost.

Explanation:

Predictability

Predictability in the cloud lets you move forward with confidence. Predictability can be focused on performance predictability or cost predictability. Both performance and cost predictability are heavily influenced by the Microsoft Azure Well-Architected Framework. Deploy a solution that's built around this framework and you have a solution that's cost and performance are predictable.

<https://learn.microsoft.com/en-us/training/modules/describe-benefits-use-cloud-services/3-reliability-predictability-cloud>

Question: 389

CertyIQ

Which cloud service model minimizes the management responsibility of a customer?

- A. infrastructure as a service (IaaS)
- B. platform as a service (PaaS)
- C. software as a service (SaaS)

Answer: C

Explanation:

Software as a service (SaaS) is a cloud service model that allows customers to access and use software applications over the internet. In the SaaS model, the provider is responsible for managing and maintaining the infrastructure, software, and data associated with the application. The customer pays a subscription fee to use the software and does not need to worry about installing, configuring, or maintaining the software.

SaaS minimizes the management responsibility of the customer, as the provider handles most of the management tasks, such as provisioning, scaling, patching, and updating the software. This allows the customer to focus on using the software to meet their business needs, rather than worrying about the underlying infrastructure.

Question: 390

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must

- be deployed to a separate virtual network.
- run a different operating system than the other virtual machines.
- be deployed to a separate resource group.
- have two network interfaces.

Answer:

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must

- be deployed to a separate virtual network.
- run a different operating system than the other virtual machines.
- be deployed to a separate resource group.
- have two network interfaces.

Question: 391

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

An organization that hosts its own infrastructure

- in a private cloud
- in a hybrid cloud
- in the public cloud
- on a Hyper-V host

no longer requires a data center.

Answer:

An organization that hosts its own infrastructure

- in a private cloud
- in a hybrid cloud
- in the public cloud
- on a Hyper-V host

no longer requires a data center.

Explanation:

in the public cloud.

Question: 392

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

When a cloud app can allocate and release resources, it has

- elasticity.
- governance.
- high availability.
- predictability.
- reliability.

Answer:

Answer Area

When a cloud app can allocate and release resources, it has

- elasticity.
- governance.
- high availability.
- predictability.
- reliability.

Explanation:

Elastic computing is the ability to quickly expand or decrease computer processing, memory, and storage resources to meet changing demands without worrying about capacity planning and engineering for peak usage. Typically controlled by system monitoring tools, elastic computing matches the amount of resources allocated to the amount of resources actually needed without disrupting operations. With cloud elasticity, a company avoids paying for unused capacity or idle resources and doesn't have to worry about investing in the purchase or maintenance of additional resources and equipment.

<https://azure.microsoft.com/en-us/resources/cloud-computing-dictionary/what-is-elastic-computing/>

Question: 393

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

- An Azure DevOps pipeline
- An Azure Resource Manager template
- Azure Application Gateway
- Azure Functions

runs application code in Azure without requiring a server.

Answer:

Answer Area

runs application code in Azure without requiring a server.

Explanation:

Azure Functions is a serverless solution that allows you to write less code, maintain less infrastructure, and save on costs.

Question: 394

CertyIQ

HOTSPOT

-
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The Archive access tier for Azure Storage can be set at the account level.	<input type="radio"/>	<input type="radio"/>
The Cool access tier offers the lowest costs for storing blobs in Azure Storage.	<input type="radio"/>	<input type="radio"/>
After blobs are uploaded to an Azure Storage container, the access tier of the storage account can be changed.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
The Archive access tier for Azure Storage can be set at the account level.	<input type="radio"/>	<input checked="" type="radio"/>
The Cool access tier offers the lowest costs for storing blobs in Azure Storage.	<input type="radio"/>	<input checked="" type="radio"/>
After blobs are uploaded to an Azure Storage container, the access tier of the storage account can be changed.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No

No

Yes

The archive access tier for Azure Storage cannot be set at the account level. It can only be set at the blob level

Hot, cool, and archive tiers can be set at the blob level

The Archive Tier has the lowest storage cost of them all

Hot Tier: Storage Cost: Highest / Access Cost: Lowest

Cool Tier: Storage Cost: Medium / Access Cost: Medium

Archive Tier: Storage Cost: Lowest/ Access Cost: Highest

Reference:

<https://learn.microsoft.com/en-us/azure/storage/blobs/access-tiers-overview>

Question: 395

CertyIQ

DRAG DROP

-

Match the Azure storage services to the appropriate descriptions.

To answer, drag the appropriate storage service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Storage service

- Azure Blob storage
- Azure Disk storage
- Azure Files
- Azure Queue Storage

Answer Area

- Used for reliable messaging between applications
- Can be accessed as a network share from a Windows device
- Can be configured to use the Archive access tier

Answer:**Answer Area**

- Azure Queue Storage Used for reliable messaging between applications
- Azure Files Can be accessed as a network share from a Windows device
- Azure Blob storage Can be configured to use the Archive access tier

Explanation:

Azure Queue storage is a fully managed, cloud-based message queue service.

Azure Queue Storage is a service for storing large numbers of messages. You access messages from anywhere in the world via authenticated calls using HTTP or HTTPS. A queue message can be up to 64 KB in size. A queue may contain millions of messages, up to the total capacity limit of a storage account. Queues are commonly used to create a backlog of work to process asynchronously

<https://learn.microsoft.com/en-us/azure/storage/queues/storage-queues-introduction>

Azure Files allows you to create file shares in the cloud that can be accessed by both Windows and Linux clients over the SMB (Server Message Block) protocol.

Question: 396**CertyIQ****HOTSPOT**

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Premium storage accounts can be configured as Azure file shares.	<input type="radio"/>	<input type="radio"/>
Premium storage accounts can be configured as block blobs storage.	<input type="radio"/>	<input type="radio"/>
Premium storage accounts can be configured as StorageV2 storage.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

Statements	Yes	No
Premium storage accounts can be configured as Azure file shares.	<input checked="" type="checkbox"/>	<input type="radio"/>
Premium storage accounts can be configured as block blobs storage.	<input checked="" type="checkbox"/>	<input type="radio"/>
Premium storage accounts can be configured as StorageV2 storage.	<input type="radio"/>	<input checked="" type="checkbox"/>

Explanation:

1: True.

Premium storage accounts provide high-performance storage for Azure virtual machines. Using premium storage accounts to create file shares can provide better performance and increased reliability compared to standard storage accounts.

2: True.

Block blobs are used to store unstructured data, such as text and images, and can be up to 4.75 TB in size. Using premium storage accounts for block blobs can provide better performance and increased reliability compared to standard storage accounts.

3: False.

Premium storage accounts cannot be configured as a storageV2 storage accounts. StorageV2 storage account is a new version of General purpose storage accounts, that provide all the features of the General purpose v1 and additional features and capabilities such as larger file shares, higher IOPS and throughput, and archive storage tier.

Select the answer that correctly completes the sentence.

Answer Area

Premium block blobs storage accounts only support

- geo-redundant storage (GRS)
- geo-zone-redundant storage (GZRS)
- locally-redundant storage (LRS)
- zone-redundant storage (ZRS)

redundancy.

Answer:

Answer Area

Premium block blobs storage accounts only support

- geo-redundant storage (GRS)
- geo-zone-redundant storage (GZRS)
- locally-redundant storage (LRS)
- zone-redundant storage (ZRS)

redundancy.

Explanation:

Key word - 'redundancy', means it will have to be stored in more than one place. So answer is correct, ZRS.

Question: 398

CertyIQ

You have an Azure web app.

You need to manage the settings of the web app from an iPhone.

What are two Azure management tools that you can use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Windows PowerShell
- B. Azure Cloud Shell
- C. the Azure portal
- D. Azure Storage Explorer

Answer: BC

Explanation:

<https://azure.microsoft.com/en-us/get-started/azure-portal/mobile-app>

HOTSPOT

You need to create a new Azure file share.

What should you use? To answer, select the service in the answer area.

NOTE: Each correct selection is worth one point.

Resource groups

Quickstart Center

App Services

Function App

SQL Databases

Azure Cosmos DB

Virtual machines

Load balancers

Storage accounts

Virtual networks

Azure Active Directory

Monitor

Advisor

Microsoft Defender for Cloud

Help + support

Cost Management + Billing

Answer:

-  Resource groups
-  Quickstart Center
-  App Services
-  Function App
-  SQL Databases
-  Azure Cosmos DB
-  Virtual machines
-  Load balancers
-  Storage accounts
-  Virtual networks
-  Azure Active Directory
-  Monitor
-  Advisor
-  Microsoft Defender for Cloud
-  Help + support
-  Cost Management + Billing

Question: 400

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area**Statements**

You can deploy Azure Resource Manager (ARM) templates by using the Azure portal.

Yes**No**

Azure Resource Manager (ARM) templates can define infrastructure by using code.

Each Azure resource to be deployed requires a separate Azure Resource Manager (ARM) template.

Answer:**Answer Area****Statements**

You can deploy Azure Resource Manager (ARM) templates by using the Azure portal.

Yes**No**

Azure Resource Manager (ARM) templates can define infrastructure by using code.

Each Azure resource to be deployed requires a separate Azure Resource Manager (ARM) template.

Explanation:

YYN

It is not necessary to use a separate template for each resource. For example, an ARM template can define a virtual machine, a storage account, and a virtual network altogether in a single template.

Question: 401

CertyIQ

What should you use to prevent traffic from an Azure virtual network from being routed to an Azure Storage account via the internet?

- A. a network security group (NSG)
- B. a public endpoint
- C. Azure VPN Gateway
- D. a service endpoint

Answer: D**Explanation:**

1. I'd go with D
2. A storage account is an Azure Resource Manager resource.

Question: 402

CertyIQ

Which service can replace a resource lock automatically if the lock is removed?

- A. Azure Information Protection (AIP)
- B. Azure Blueprints
- C. Azure Backup
- D. Azure Advisor

Answer: B

Explanation:

It's typically possible for someone with appropriate Azure role-based access control (Azure RBAC) on the subscription, such as the 'Owner' role, to be allowed to alter or delete any resource. This access isn't the case when Azure Blueprints applies locking as part of a deployed assignment. If the assignment was set with the Read Only or Do Not Delete option, not even the subscription owner can perform the blocked action on the protected resource.

This security measure protects the consistency of the defined blueprint and the environment it was designed to create from accidental or programmatic deletion or alteration.

<https://learn.microsoft.com/en-us/azure/governance/blueprints/concepts/resource-locking#overriding-locking-states>

Question: 403

CertyIQ

HOTSPOT

You need to create a new user for an Azure subscription.

What should you use? To answer, select the service in the answer area.

NOTE: Each correct match is worth one point.

Answer Area

Azure services

Answer:

Answer Area

Azure services

Explanation:

The keyword is **subscription**

At the Azure portal, select Subscriptions. Select the subscription you want to assign and then select Access Control. Select Add to add a user to the subscription. After you add the user to the subscription, you can assign the user a role and the account to which the user will have access.

Question: 404

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

Azure Resource Manager (ARM) templates use the

- CSV format.
- HTML format.
- JSON format.
- XML format.

Answer:

Answer Area

Azure Resource Manager (ARM) templates use the

Explanation:

"JSON format" is the answer.

<https://learn.microsoft.com/en-us/azure/azure-resource-manager/templates/overview>

To implement infrastructure as code for your Azure solutions, use Azure Resource Manager templates (ARM templates). The template is a JavaScript Object Notation (JSON) file that defines the infrastructure and configuration for your project. The template uses declarative syntax, which lets you state what you intend to deploy without having to write the sequence of programming commands to create it. In the template, you specify the resources to deploy and the properties for those resources.

Question: 405

CertyIQ

You plan to collect and analyze event details for five Azure virtual machines.

You need to run queries to compare the event details collected from all the virtual machines.

Which two tools should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Azure Service Health
- B. Azure Service Bus
- C. Azure Monitor
- D. Azure Advisor
- E. Log Analytics

Answer: CE

Explanation:

Log Analytics: Use this primary tool in the Azure portal to edit log queries and interactively analyze their results. Even if you intend to use a log query elsewhere in Azure Monitor, you'll typically write and test it in Log Analytics before you copy it to its final location.

<https://learn.microsoft.com/en-us/azure/azure-monitor/logs/log-query-overview>

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

An Azure SLA is a formal agreement between Microsoft and a customer that defines

- a commitment to deliver the features on a technology roadmap.
- a commitment to performance standards.
- the maximum scalability limits of an available infrastructure.
- the minimum scalability limits of an available infrastructure.

Answer:**Answer Area**

An Azure SLA is a formal agreement between Microsoft and a customer that defines

- a commitment to deliver the features on a technology roadmap.
- a commitment to performance standards.**
- the maximum scalability limits of an available infrastructure.
- the minimum scalability limits of an available infrastructure.

Explanation:

"a commitment to performance standards" is the the answer.

An Azure Service Level Agreement (SLA) is a formal agreement between Microsoft and a customer that defines the level of service and availability that Microsoft will provide for a specific Azure service.

The SLA typically includes metrics such as uptime, availability, and responsiveness, and specifies the guarantees that Microsoft will make in terms of meeting those metrics.

In more detail, an Azure SLA outlines the service level targets and credit system for Azure service, ensuring that customer will receive a credit towards their bill if they don't meet the agreed-upon service level. It guarantees a certain level of uptime (i.e. availability) for a given Azure service, and if that service falls below that level, customer may be eligible for a service credit to be applied to their account.

Question: 407

CertyIQ

What should you use to track the costs of Azure resources?

- A. Azure Quickstart templates
- B. tags
- C. budgets
- D. usage and quotas

Answer: D**Explanation:**

Usage and quotas allow you to monitor and control resource usage, and prevent unexpected charges. You can set quotas on resources to limit the amount of usage, and use Azure Monitor to track usage and performance metrics. This helps you identify inefficiencies and optimize your resource usage to save costs. Tags allow you to categorize Azure resources and add metadata to them, which makes it easier to track and manage costs. You can use tags to organize resources by department, project, environment, or any other category that makes sense for your organization. Once you have tagged your resources, you can use the Azure Cost Management and Billing tool to analyze costs by tag and get a better understanding of where your money is going. Budgets allow you to set spending limits and get alerts when you are approaching or exceeding those limits. You can set budgets at the subscription, resource group, or resource level, and receive email notifications when spending reaches a certain threshold. Budgets help you stay on top of costs and avoid unexpected charges.

Question: 408

CertyIQ

HOTSPOT

-

Select the answer that correctly completes the sentence.

▼
Authorization
Authentication
Federation
Ticketing

is the process of verifying a user's credentials.

Answer:

Authentication ▼ is the process of verifying a user's credentials.

Explanation:

Authentication is the process of proving that you are who you say you are.

Authorization is the act of granting an authenticated party permission to do something.

<https://learn.microsoft.com/en-us/azure/active-directory/develop/authentication-vs-authorization>

Therefore answer should be Authentication

Question: 409

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

When planning to migrate a public website to Azure,
you must plan to

- deploy a VPN.
- pay monthly usage costs.
- pay to transfer all the website data to Azure.
- reduce the number of connections to the website.

Answer:

When planning to migrate a public website to Azure, you must plan to pay monthly usage costs.

Explanation:

B. pay monthly usage costs: Azure is a pay-as-you-go service, which means that you will be charged based on your usage. You must plan to pay monthly usage costs for the Azure services and resources you use to host your website.

Question: 410

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

- Resource groups
- Management groups
- Azure policies
- Azure App Service plans

provide organizations with the ability to manage the compliance of Azure resources across multiple subscriptions.

Answer:

<input type="checkbox"/> 
Resource groups
Management groups
Azure policies
Azure App Service plans

provide organizations with the ability to manage the compliance of Azure resources across multiple subscriptions.

Explanation:

"Management Groups" is the answer.

<https://learn.microsoft.com/en-us/azure/governance/management-groups/overview>

If your organization has many Azure subscriptions, you may need a way to efficiently manage access, policies, and compliance for those subscriptions. Management groups provide a governance scope above subscriptions. You organize subscriptions into management groups; the governance conditions you apply cascade by inheritance to all associated subscriptions.

Question: 411

CertyIQ

You plan to reduce ongoing Azure expenditures.

You need to identify which factors affect the costs of a resource.

Which three factors should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. the volume of outbound data
- B. the volume of inbound data
- C. the service tier
- D. the Azure region
- E. the type of processed data

Answer: ACD

Explanation:

A C D

There are several factors that can affect the costs of a resource in Azure. Here are three factors that you should consider when trying to identify which factors are affecting the costs of a resource:

The volume of outbound data: The volume of data that is transferred out of Azure can affect the costs of a resource. For example, if you have a resource that generates a large volume of outbound data, such as a web server that serves a lot of content to users, this can result in higher costs.

The service tier: The service tier that you choose for a resource can also affect its costs. For example, if you choose a higher service tier, such as a more powerful virtual machine, this can result in higher costs.

The Azure region: The Azure region in which a resource is deployed can also affect its costs. Azure regions are geographical areas that contain one or more data centers, and the costs of resources can vary depending on the region in which they are deployed.

Question: 412

CertyIQ

Your company has an Azure subscription that contains several resources.

You need to identify which department is responsible for the cost of each resource.

What should you use?

- A. budgets
- B. alerts
- C. tags

Answer: C**Explanation:**

<https://learn.microsoft.com/en-us/azure/azure-resource-manager/management/tag-resources?tabs=json#tags-and-billing>

You can use tags to group your billing data. If you're running multiple VMs for different organizations, for example, use the tags to group usage by cost center. You can also use tags to categorize costs by runtime environment, such as the billing usage for VMs running in the production environment.

Question: 413

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

Azure Cosmos DB is an example of a

offering.

- platform as a service (PaaS)
- infrastructure as a service (IaaS)
- content as a service
- software as a service (SaaS)

Answer:

Answer Area

Azure Cosmos DB is an example of a

offering.

- platform as a service (PaaS)
- infrastructure as a service (IaaS)
- content as a service
- software as a service (SaaS)

Explanation:

Question: 414

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

Data that is stored **in** the Archive access tier of an Azure Storage

account

- can be accessed at any time by using azcopy.exe.
- can only be read by using Azure Backup.
- must be restored before the data can be accessed.
- must be rehydrated before the data can be accessed.

Answer:

Answer Area

Data that is stored **in** the Archive access tier of an Azure Storage

account

- can be accessed at any time by using azcopy.exe.
- can only be read by using Azure Backup.
- must be restored before the data can be accessed.
- must be rehydrated before the data can be accessed.

Question: 415

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
An Azure Virtual Desktop session host can run Windows 10 or Windows 11 only.	<input type="radio"/>	<input type="radio"/>
An Azure Virtual Desktop host pool that includes 20 session hosts supports maximum of 20 simultaneous user connections.	<input type="radio"/>	<input type="radio"/>
Azure Virtual Desktop supports desktop and app virtualization.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
An Azure Virtual Desktop session host can run Windows 10 or Windows 11 only.	<input type="radio"/>	<input checked="" type="radio"/>
An Azure Virtual Desktop host pool that includes 20 session hosts supports maximum of 20 simultaneous user connections.	<input type="radio"/>	<input checked="" type="radio"/>
Azure Virtual Desktop supports desktop and app virtualization.	<input checked="" type="radio"/>	<input type="radio"/>

Question: 416

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
In an Azure virtual machine scale set, the virtual machines are configured identically.	<input type="radio"/>	<input type="radio"/>
The number of Azure virtual machines in a virtual machine scale set can increase automatically.	<input type="radio"/>	<input type="radio"/>
The number of Azure virtual machines in a virtual machine scale set can decrease automatically.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
In an Azure virtual machine scale set, the virtual machines are configured identically.	<input checked="" type="radio"/>	<input type="radio"/>
The number of Azure virtual machines in a virtual machine scale set can increase automatically.	<input checked="" type="radio"/>	<input type="radio"/>
The number of Azure virtual machines in a virtual machine scale set can decrease automatically.	<input checked="" type="radio"/>	<input type="radio"/>

Question: 417

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

You have an Azure virtual network named VNET1 in a resource group named RG1.

You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1

- is deleted automatically.
- is moved automatically to another resource group.
- continues to function normally.
- is now a read-only object.

Answer:

Answer Area

You have an Azure virtual network named VNET1 in a resource group named RG1.

You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1

- is deleted automatically.
- is moved automatically to another resource group.
- continues to function normally.
- is now a read-only object.

Question: 418

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Azure Advisor provides personalized recommendations.	<input type="radio"/>	<input type="radio"/>
Azure Advisor can provide cost recommendations for virtual machines.	<input type="radio"/>	<input type="radio"/>
Azure Advisor can provide recommendations across multiple Azure subscriptions.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure Advisor provides personalized recommendations.	<input checked="" type="checkbox"/>	<input type="radio"/>
Azure Advisor can provide cost recommendations for virtual machines.	<input checked="" type="checkbox"/>	<input type="radio"/>
Azure Advisor can provide recommendations across multiple Azure subscriptions.	<input checked="" type="checkbox"/>	<input type="radio"/>

Question: 419

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can assign an Azure policy to a virtual machine.	<input type="radio"/>	<input type="radio"/>
If an Azure policy is assigned to a resource group, noncompliant resources are removed from the group.	<input type="radio"/>	<input type="radio"/>
If an Azure policy is assigned to a resource group, only compliant resources can be deployed to the group.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
You can assign an Azure policy to a virtual machine.	<input checked="" type="checkbox"/>	<input type="radio"/>
If an Azure policy is assigned to a resource group, noncompliant resources are removed from the group.	<input type="radio"/>	<input checked="" type="checkbox"/>
If an Azure policy is assigned to a resource group, only compliant resources can be deployed to the group.	<input checked="" type="checkbox"/>	<input type="radio"/>

Question: 420

CertyIQ

You have on-premises servers that run Windows Server.

What should you implement to manage the servers by using the Azure portal?

- A.Azure Kubernetes Service (AKS)
- B.Azure Arc
- C.Docker
- D.role-based access control (RBAC)

Answer: B

Explanation:

Answer: B Azure Arc

Azure Arc allows us to extend Azure management and governance capabilities to your on-premises and multi-cloud environments. By implementing Azure Arc, we can connect your Windows Server machines to Azure and manage them centrally through the Azure portal, alongside your other Azure resources.

Question: 421

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

You can use

- Advisor recommendations
- Access control (IAM)
- Budget alerts
- Compliance

in Azure to send email alerts when the cost of the current billing period for an Azure subscription exceeds a specified limit.

Answer:

Answer Area

You can use

- Advisor recommendations
- Access control (IAM)
- Budget alerts
- Compliance

in Azure to send email alerts when the cost of the current billing period for an Azure subscription exceeds a specified limit.

Question: 422

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

If Windows Server or Microsoft SQL Server licenses are covered by

- an End User License Agreement (EULA)
- Microsoft Lifecycle Policy
- Software Assurance

, you can repurpose the licenses on Azure virtual machines.

Answer:

Answer Area

If Windows Server or Microsoft SQL Server licenses are covered by

- an End User License Agreement (EULA)
- Microsoft Lifecycle Policy
- Software Assurance**

, you can repurpose the licenses on Azure virtual machines.

Explanation:

Software assurance is a correct answer.

Question: 423

CertyIQ

You have a web app that runs in Azure.

You need to identify the amount of time it takes for web pages to load in a user's browser.

What should you use?

- A.Azure Monitor alerts
- B.Application Insights in Azure Monitor**
- C.Log Analytics
- D.Azure Network Watcher

Answer: B

Explanation:

It's B: Azure Application Insights is a feature of Azure Monitor that allows to monitor running applications, automatically detect performance anomalies, and use built-in analytics tools to see what users do on an app.

Question: 424

CertyIQ

HOTSPOT

-

Select the answer that correctly completes the sentence.

- High availability**
- Predictability
- Reliability
- Scalability

ensures access to cloud resources in the event of a service failure.

Answer:

▼

High availability
Predictability
Reliability
Scalability

ensures access to cloud resources in the event of a service failure.

Explanation:

'High Availability' is correct.

Question: 425

CertyIQ

What should a desktop application use to interact with Azure and manage resources?

- A.APIs
- B.Azure Resource Manager (ARM) templates
- C.Azure Command-Line Interface (CLI)
- D.Azure Cloud Shell

Answer: A

Explanation:

'A. APIs' is correct.Key is Desktop Applications which need to interact with Azure resources in a programmatical way, so APIs.

Question: 426

CertyIQ

DRAG DROP

-

Match the cloud computing benefits to the appropriate requirements.

To answer, drag the appropriate benefit from the column on the left to its requirement on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Benefits	Answer Area
Agility	<input type="text"/> The ability to dynamically scale the resources available to a cloud app
Elasticity	<input type="text"/> The ability to use cloud-based backup services to restore resources in the event of an outage
Disaster recovery	<input type="text"/> The ability to quickly deploy and configure cloud-based resources as app requirements change

Answer:

Answer Area

Elasticity	The ability to dynamically scale the resources available to a cloud app
Disaster recovery	The ability to use cloud-based backup services to restore resources in the event of an outage
Agility	The ability to quickly deploy and configure cloud-based resources as app requirements change

Question: 427

CertyIQ

DRAG DROP

Match the security components to the appropriate defense in depth layers.

To answer, drag the appropriate security component from the column on the left to its defense in depth layer on the right. Each security component may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Components

- Multifactor authentication (MFA)
- Software updates and patches
- Surveillance camera

Answer Area

- Compute
- Identity and access
- Physical security

Answer:

Answer Area

- Software updates and patches Compute
- Multifactor authentication (MFA) Identity and access
- Surveillance camera Physical security

Question: 428

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The Hot access tier is available for blob data that uses standard storage.	<input type="radio"/>	<input type="radio"/>
The Cool access tier is available for file shares in premium storage.	<input type="radio"/>	<input type="radio"/>
The Cool access tier can be configured at the storage account level.	<input type="radio"/>	<input type="radio"/>

Answer:

Statements	Yes	No
The Hot access tier is available for blob data that uses standard storage.	<input checked="" type="checkbox"/>	<input type="radio"/>
The Cool access tier is available for file shares in premium storage.	<input type="radio"/>	<input checked="" type="checkbox"/>
The Cool access tier can be configured at the storage account level.	<input checked="" type="checkbox"/>	<input type="radio"/>

Question: 429

CertyIQ

Which two features or services can be integrated with Azure Monitor? Each correct answer presents part of the solution.

NOTE: Each correct answer is worth one point.

- A.Azure status
- B.Application Insights
- C.Azure Advisor
- D.Log Analytics
- E.Azure Service Health

Answer: BD

Explanation:

- B.Application Insights
- D.Log Analytics

Question: 430

CertyIQ

What provides a unified way to project and manage non-Azure resources in Azure Resource Manager (ARM)?

- A.Azure Migrate
- B.Azure AD Connect
- C.Azure Arc
- D.Azure Front Door

Answer: C

Explanation:

<https://learn.microsoft.com/EN-us/azure/azure-arc/servers/manage-vm-extensions-template>

Question: 431

CertyIQ

HOTSPOT

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
AzCopy is a command-line utility used to copy blobs or files to or from a storage account.	<input type="radio"/>	<input type="radio"/>
Azure Storage Explorer is a cloud-hosted migration service used to transfer large amounts of data.	<input type="radio"/>	<input type="radio"/>
Azure File Sync syncs files and folders between Azure Files and Windows file servers.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
AzCopy is a command-line utility used to copy blobs or files to or from a storage account.	<input checked="" type="checkbox"/>	<input type="radio"/>
Azure Storage Explorer is a cloud-hosted migration service used to transfer large amounts of data.	<input type="radio"/>	<input checked="" type="checkbox"/>
Azure File Sync syncs files and folders between Azure Files and Windows file servers.	<input checked="" type="checkbox"/>	<input type="radio"/>

Explanation:

YN It's correct AzCopy is a command-line utility that you can use to copy blobs or files to or from a storage account <https://learn.microsoft.com/en-us/azure/storage/common/storage-use-azcopy-v10> Microsoft Azure Storage Explorer is a standalone app that makes it easy to work with Azure Storage data on Windows, macOS, and Linux. "<https://learn.microsoft.com/en-us/azure/vs-azure-tools-storage-manage-with-storage-explorer?tabs=windows>"

Question: 432

CertyIQ

HOTSPOT

-

Select the answer that correctly completes the sentence.

Azure Data Box
 Azure Databricks
 Azure File Sync
 Azure Migrate

is a physical migration service used to transfer large amounts of data in a quick, inexpensive, and reliable way.

Answer:

Azure Data Box
 Azure Databricks
 Azure File Sync
 Azure Migrate

is a physical migration service used to transfer large amounts of data in a quick, inexpensive, and reliable way.

Explanation:

Azure Data Box is correct "The Microsoft Azure Data Box cloud solution lets you send terabytes of data into and out of Azure in a quick, inexpensive, and reliable way."

<https://learn.microsoft.com/en-us/azure/databox/data-box-overview>

Question: 433

CertyIQ

Your company has an Azure subscription and three business units.

You plan to deploy new resources for each business unit.

You need to ensure that the new resources are deployed by using a repeatable and reliable method that applies the same configurations to each resource.

What should you use?

- A.Azure Policy
- B.Azure Arc
- C.a resource group
- D.Azure Resource Manager (ARM) templates

Answer: D

Explanation:

D. Azure Resource Manager (ARM) templatesis correct.

Question: 437

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

the same Azure region.
using the same Azure Resource Manager template
the same resource group
the same availability zone

Answer:

Answer Area

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

to the same Azure region.
by using the same Azure Resource Manager template.
to the same resource group.
to the same availability zone.

Explanation:

A resource group is a logical container for Azure resources. Resource groups make the management of Azure resources easier.

With a resource group, you can allow a user to manage all resources in the resource group, such as virtual machines, websites, and subnets. The permissions you apply to the resource group apply to all resources contained in the resource group.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/overview#resource-groups>
<https://docs.microsoft.com/en-us/azure/role-based-access-control/overview>

Question: 438

CertyIQ

Where does Azure Monitor store event data?

- A.an Azure Blob Storage account
- B.Azure Storage Queue
- C.Azure SQL Database
- D.a Log Analytics workspace

Answer: D

Explanation:

D. a Log Analytics workspace Azure Monitor stores event data in a Log Analytics workspace. This is a unique environment for Azure Monitor log data, where you can use Log Analytics to analyse collected data across sources. Each workspace has its own data repository and configuration, and data sources and solutions are configured to store their data in a workspace.

Question: 439

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

You deploy an Azure resource. The resource becomes unavailable for an extended period due to a service outage.

Microsoft will

- refund your bank account.
- migrate the resource to another subscription.
- credit your Azure account.
- send you a coupon code that you can redeem for Azure credits.

Answer:

Answer Area

You deploy an Azure resource. The resource becomes unavailable for an extended period due to a service outage.

Microsoft will

- refund your bank account.
- migrate the resource to another subscription.
- credit your Azure account.**
- send you a coupon code that you can redeem for Azure credits.

Question: 440

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

When planning to migrate a public website to Azure, you must plan to

- deploy a VPN.
- pay monthly usage costs.
- pay to transfer all the website data to Azure,
- reduce the number of connections to the website.

Answer:

Answer Area

When planning to migrate a public website to Azure, you must plan to

- deploy a VPN.
- pay monthly usage costs.**
- pay to transfer all the website data to Azure,
- reduce the number of connections to the website.

Question: 441

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

If a resource group named RG1 has a delete lock,
can delete RG1.

only a member of the global administrators group
the delete lock must be removed before an administrator
an Azure policy must be modified before an administrator
an Azure tag must be added before an administrator

Answer:

Answer Area

If a resource group named RG1 has a delete lock,
can delete RG1.

only a member of the global administrators group
the delete lock must be removed before an administrator
an Azure policy must be modified before an administrator
an Azure tag must be added before an administrator

Question: 442

CertyIQ

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

Azure policies provide
Resource groups provide
Azure Resource Manager templates provide
Management groups provide

a common platform for deploying objects to a cloud infrastructure and for implementing consistency across the Azure environment.

Answer:

Answer Area

Azure policies provide
Resource groups provide
Azure Resource Manager templates provide
Management groups provide

a common platform for deploying objects to a cloud infrastructure and for implementing consistency across the Azure environment.

Explanation:

Azure Resource Management Templates provide.

Question: 443

CertyIQ

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.

Which three computers can run the script? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A.a computer that runs Windows 11 and has the Azure CLI tools installed
- B.a computer that runs Linux and has the Azure CLI tools installed
- C.a computer that runs macOS and has PowerShell Core 6.0 installed
- D.a computer that runs Chrome OS and uses Azure Cloud Shell
- E.a computer that runs Windows 10 and has the Azure PowerShell module installed

Answer: CDE

Explanation:

C. A computer that runs macOS and has PowerShell Core 6.0 installed.

PowerShell Core 6.0 is cross-platform and can run on macOS. If the Azure PowerShell module is also installed, this computer can run the script.

D. A computer that runs Chrome OS and uses Azure Cloud Shell.

Azure Cloud Shell supports both Bash and PowerShell. If the Cloud Shell is configured to use PowerShell, it can run the script.

E. A computer that runs Windows 10 and has the Azure PowerShell module installed.

Windows 10 supports PowerShell, and with the Azure PowerShell module installed, it can run the script to create Azure resources.

yes
No

Question: 445**CertyIQ**

In the infrastructure as a service (IaaS) cloud service model, which two components are the responsibility of the cloud service provider? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A.the configuration and maintenance of storage
- B.the installation and configuration of the operating system
- C.maintaining the hardware
- D.the network configuration
- E.physical security of the datacenter infrastructure

Answer: CE**Explanation:**

- C. maintaining the hardware
- E. physical security of the data center infrastructure

Question: 446**CertyIQ**

HOTSPOT

-

Select the answer that correctly completes the sentence.

Answer Area

The Cool access tier is optimized

for data that is accessed infrequently and stored for at least 30 days.
for data that is accessed rarely, is stored for at least 180 days, and has flexible latency requirements.
for storing data that is accessed frequently.

Answer:

Answer Area

The Cool access tier is optimized

for data that is accessed infrequently and stored for at least 30 days.
for data that is accessed rarely, is stored for at least 180 days, and has flexible latency requirements.
for storing data that is accessed frequently.

Explanation:

For data that is accessed infrequently and stored for at least 30 days.

Question: 447

CertyIQ

DRAG DROP

You need to identify a customer's level of shared responsibility based on the cloud service model.

In which order should you list each model from most customer responsibility to least customer responsibility? To answer, move all models from the list of models to the answer area and arrange them in the correct order.

Cloud Service Model

platform as a service (PaaS)

software as a service (SaaS)

infrastructure as a service (IaaS)

Answer Area

Answer:

Answer Area

infrastructure as a service (IaaS)

platform as a service (PaaS)

software as a service (SaaS)

Question: 448

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
For the platform as a service (PaaS) cloud service, updating the operating system is the responsibility of the customer.	<input type="radio"/>	<input type="radio"/>
For the infrastructure as a service (IaaS) cloud service, network control is the responsibility of Microsoft.	<input type="radio"/>	<input type="radio"/>
For the software as a service (SaaS) cloud service, identity management is a shared responsibility between the customer and Microsoft.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
For the platform as a service (PaaS) cloud service, updating the operating system is the responsibility of the customer.	<input type="radio"/>	<input checked="" type="radio"/>
For the infrastructure as a service (IaaS) cloud service, network control is the responsibility of Microsoft.	<input type="radio"/>	<input checked="" type="radio"/>
For the software as a service (SaaS) cloud service, identity management is a shared responsibility between the customer and Microsoft.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No

No

yes

Question: 449

HOTSPOT

-

Select the answer that correctly completes the sentence.

CertyIQ

Answer Area

A dropdown menu containing the following options:

- Azure Blob Storage
- Azure Files
- Azure Queue Storage
- Azure Table Storage

supports synchronization between on-premises storage and Azure Storage

Answer:

Answer Area

A dropdown menu containing the following options:

- Azure Blob Storage
- Azure Files
- Azure Queue Storage
- Azure Table Storage

supports synchronization between on-premises storage and Azure Storage

Question: 450

CertyIQ

You have an Azure Storage account named storage1.

You need to ensure that containers can be created in, but not deleted from, storage1.

What should you do?

- A.Create a ReadOnly lock for storage1.
- B.Create a delete lock for storage1.
- C.Enable container soft delete.
- D.Enable blob soft delete.

Answer: B

Explanation:

Create a delete lock for storage1.

Question: 451

CertyIQ

You have an Azure subscription.

You need to use Azure Cloud Shell to run a deployment script.

What should you use to access Cloud Shell?

- A.Azure Resource Manager (ARM)
- B.Microsoft Visual Studio
- C.a Windows command prompt
- D.a web browser

Answer: D

Explanation:

Correct answer is D:a web browser.

CertyIQ

Question: 452

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Adding more RAM to a virtual machine is an example of Horizontal scaling.	<input type="radio"/>	<input type="radio"/>
Adding an additional virtual machine based upon demand is an example of Vertical scaling.	<input type="radio"/>	<input type="radio"/>
Horizontal scaling can occur automatically or manually.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Adding more RAM to a virtual machine is an example of Horizontal scaling.	<input type="radio"/>	<input checked="" type="checkbox"/>
Adding an additional virtual machine based upon demand is an example of Vertical scaling.	<input type="radio"/>	<input checked="" type="checkbox"/>
Horizontal scaling can occur automatically or manually.	<input checked="" type="checkbox"/>	<input type="radio"/>

Question: 453

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Creating and configuring a virtual network is part of the platform as a service (PaaS) cloud service model.	<input type="radio"/>	<input type="radio"/>
In the platform as a service (PaaS) cloud service model, updating code for an Azure web app is the customer's responsibility.	<input type="radio"/>	<input type="radio"/>
Configuring user access to a platform as a service (PaaS) cloud service model is the customer's responsibility.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

Statements	Yes	No
Creating and configuring a virtual network is part of the platform as a service (PaaS) cloud service model.	<input type="radio"/>	<input checked="" type="radio"/>
In the platform as a service (PaaS) cloud service model, updating code for an Azure web app is the customer's responsibility.	<input checked="" type="radio"/>	<input type="radio"/>
Configuring user access to a platform as a service (PaaS) cloud service model is the customer's responsibility.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No

yes

yes

Question: 454

CertyIQ

You need to migrate an on-premises server by using a lift-and-shift migration.

To which type of cloud service should you migrate?

- A.infrastructure as a service (IaaS)
- B.software as a service (SaaS)
- C.platform as a service (PaaS)

Answer: A

Explanation:

infrastructure as a service (IaaS)

Question: 455**CertyIQ**

HOTSPOT

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Only one tag can be assigned to an Azure resource.	<input type="radio"/>	<input type="radio"/>
Tags can be assigned to Azure resources by using Azure Resource Manager (ARM) templates.	<input type="radio"/>	<input type="radio"/>
Tags can be used to enforce naming standards for Azure resources.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

Statements	Yes	No
Only one tag can be assigned to an Azure resource.	<input type="radio"/>	<input checked="" type="radio"/>
Tags can be assigned to Azure resources by using Azure Resource Manager (ARM) templates.	<input checked="" type="radio"/>	<input type="radio"/>
Tags can be used to enforce naming standards for Azure resources.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

No

Yes

No

Question: 456**CertyIQ**

HOTSPOT

-

Select the answer that correctly completes the sentence.

Answer Area

A managed identity
Conditional Access
Microsoft Intune

evaluates signals to allow or deny sign-ins to Azure AD.

Answer:

Answer Area

A managed identity
Conditional Access
Microsoft Intune

evaluates signals to allow or deny sign-ins to Azure AD.

Question: 457

CertyIQ

DRAG DROP

Match the Azure compute services to the appropriate descriptions.

To answer, drag the appropriate compute service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Compute services

Azure App Service

Azure Container Instances

Azure Functions

Azure Virtual Machine Scale Sets

Answer Area

Provides software emulation of a physical computer.

Provides operating system virtualization.

Answer:

Answer Area

Azure Container Instances

Provides software emulation of a physical computer.

Azure Virtual Machine Scale Sets

Provides operating system virtualization.

Explanation:

Azure Container Instances .

Azure Virtual Machines scale Sets.

Question: 458**CertyIQ**

HOTSPOT

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Azure Advisor supports alerts.	<input type="radio"/>	<input type="radio"/>
Azure Advisor recommendations can be filtered by Administrative unit.	<input type="radio"/>	<input type="radio"/>
Azure Advisor provides recommendations on improving the performance of resources.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area**

No

Yes

Yes

Question: 461**CertyIQ****HOTSPOT**

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area**Statements**

	Yes	No
Network security groups (NSGs) can contain multiple inbound and outbound security rules.	<input type="radio"/>	<input type="radio"/>
A VM that performs a particular function such as running a firewall is also called a Network virtual appliance.	<input type="radio"/>	<input type="radio"/>
A user-defined route (UDR) can only control network traffic between subnets of a single virtual network.	<input type="radio"/>	<input type="radio"/>

Answer:**Answer Area****Statements**

	Yes	No
Network security groups (NSGs) can contain multiple inbound and outbound security rules.	<input checked="" type="checkbox"/>	<input type="radio"/>
A VM that performs a particular function such as running a firewall is also called a Network virtual appliance.	<input checked="" type="checkbox"/>	<input type="radio"/>
A user-defined route (UDR) can only control network traffic between subnets of a single virtual network.	<input type="radio"/>	<input checked="" type="checkbox"/>

Explanation:

Yes

Yes

No

Question: 462**CertyIQ**

Microsoft 365 is an example of which cloud service model?

- A.infrastructure as a service (IaaS)
- B.platform as a service (PaaS)
- C.software as a service (SaaS)

Answer: C

Explanation:

software as a service (SaaS).

Question: 463

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Azure DNS only supports public DNS domain names.	<input type="radio"/>	<input type="radio"/>
Azure virtual machines can register names in Azure DNS automatically.	<input type="radio"/>	<input type="radio"/>
Azure DNS can host a custom DNS domain.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Azure DNS only supports public DNS domain names.	<input type="radio"/>	<input checked="" type="checkbox"/>
Azure virtual machines can register names in Azure DNS automatically.	<input checked="" type="checkbox"/>	<input type="radio"/>
Azure DNS can host a custom DNS domain.	<input checked="" type="checkbox"/>	<input type="radio"/>

Explanation:

No

Yes

Yes

HOTSPOT

You need to identify which blades in the Azure portal must be used to perform the following tasks:

- View security recommendations.
- Monitor the health of Azure services.

Which blade should you identify for each task? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Monitor the health of Azure services:

View security recommendations:

Answer:

Answer Area

Monitor the health of Azure services:

View security recommendations:

HOTSPOT

-

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The Cold access tier in Azure Storage is optimized for at least 90 days of data storage.	<input type="radio"/>	<input type="radio"/>
The Cool access tier in Azure Storage is optimized for at least 90 days of data storage.	<input type="radio"/>	<input type="radio"/>
The Archive access tier in Azure Storage is optimized for at least 180 days of data storage.	<input type="radio"/>	<input type="radio"/>

Answer:

Statements	Yes	No
The Cold access tier in Azure Storage is optimized for at least 90 days of data storage.	<input type="radio"/>	<input checked="" type="checkbox"/>
The Cool access tier in Azure Storage is optimized for at least 90 days of data storage.	<input type="radio"/>	<input checked="" type="checkbox"/>
The Archive access tier in Azure Storage is optimized for at least 180 days of data storage.	<input checked="" type="checkbox"/>	<input type="radio"/>

Explanation:

No

No

Yes

HOTSPOT

-

Select the answer that correctly completes the sentence.

Answer Area

You can use  to make recommendations on cost savings.

- Application Insights
- Azure Advisor
- Azure resource tags
- Azure Service Health

Answer:

You can use

- Application Insights
- Azure Advisor
- Azure resource tags
- Azure Service Health

to make recommendations on cost savings.

Explanation:

Azure Advisor is a cloud-based service provided by Microsoft Azure that offers personalized best practices recommendations to optimize Azure resources.

Question: 467

CertyIQ

DRAG DROP

In which order should you arrange the Azure resources from the highest parent object (top) to the lowest child object? To answer, move all resources from the list of resources to the answer area and arrange them in the correct order.

Resources

resource group

Azure virtual machine

Azure subscription

management group

Answer Area

Answer:

Resources

resource group

Azure virtual machine

Azure subscription

management group

Explanation:

Management group.

Azure subscription.

resource group.

Azure virtual machine.

Answer Area

management group

Azure subscription

resource group

Azure virtual machine

Question: 468

CertyIQ

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

A read-only lock prevents users from deleting an Azure resource.

Yes

No

Users can modify an Azure resource that has a delete lock applied.

Yes

No

All Azure resources inherit the locks assigned to their parent resource group.

Yes

No

Answer:

Statements

A read-only lock prevents users from deleting an Azure resource.

Yes

No

Users can modify an Azure resource that has a delete lock applied.

Yes

No

All Azure resources inherit the locks assigned to their parent resource group.

Yes

No

Explanation:

Yes

Yes

Yes

Question: 469**CertyIQ**

DRAG DROP

Match the authentication method to the appropriate level of security.

To answer, drag the appropriate authentication method from the column on the left to its level of security on the right.

NOTE: Each correct match is worth one point.

Authentication methods

- Multifactor authentication (MFA)
- Password authentication
- Passwordless authentication

Answer Area**Answer:****Authentication methods**

- Multifactor authentication (MFA)
- Password authentication
- Passwordless authentication

Answer Area**Question: 470****CertyIQ**

How many data copies are stored in gee-zone-redundant storage (GZRS)?

- A.2
- B.3
- C.6
- D.12

Answer: C**Explanation:**

Reference:

<https://learn.microsoft.com/en-us/azure/storage/common/storage-redundancy#geo-redundant-storage>

CertyIQ**Question: 471**

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

If you delete data from before 30 days has elapsed, you must pay an early deletion fee.

- an Azure Cosmos DB datastore
- Azure SQL Database
- the cool access tier of Azure Blob Storage
- the hot access tier of Azure Blob Storage

Answer:

If you delete data from before 30 days has elapsed, you must pay an early deletion fee.

- an Azure Cosmos DB datastore
- Azure SQL Database
- the cool access tier of Azure Blob Storage**
- the hot access tier of Azure Blob Storage

Question: 472**CertyIQ**

DRAG DROP

Match the cloud service to the appropriate description.

To answer, drag the appropriate cloud service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Cloud services

- Infrastructure as a service (IaaS)
- Platform as a service (PaaS)
- Software as a service (SaaS)

Answer Area

-
-
-

Provides the most control of a cloud environment.

Provides the most control of a database design without having to maintain the operating system.

Used to host Azure virtual machines.

Answer:

Cloud services	Answer Area	
Infrastructure as a service (IaaS)		Provides the most control of a cloud environment.
Platform as a service (PaaS)		Provides the most control of a database design without having to maintain the operating system.
Software as a service (SaaS)		Used to host Azure virtual machines.

Question: 473

CertyIQ

What can you use to make recommendations that will reduce Azure costs?

- A.Azure Advisor
- B.Log Analytics
- C.Azure Service Health
- D.the Azure pricing calculator

Answer: A**Explanation:**

Azure Advisor: Azure Advisor is a personalized cloud consultant that helps you follow best practices to optimize your Azure deployments. It provides recommendations to reduce costs, improve performance, enhance security, and ensure high availability. For cost reduction specifically, Azure Advisor analyzes your resource configurations and usage patterns, then identifies opportunities to reduce your overall spend. This can include recommendations like resizing or shutting down underutilized resources, adopting reserved instances, and more.

Thank you

Thank you for being so interested in the premium exam material.

I'm glad to hear that you found it informative and helpful.

If you have any feedback or thoughts on the bumps, I would love to hear them.
Your insights can help me improve our writing and better understand our readers.

Best of Luck

You have worked hard to get to this point, and you are well-prepared for the exam
Keep your head up, stay positive, and go show that exam what you're made of!
